Books will be issued only on presentation of proper library cards.

Unless labeled otherwise, books may be retained for two weeks. Borrowers finding books marked, defaced or mutilated are expected to report same at library desk; otherwise the last borrower will be held responsible for all imperfections discovered.

The card holder is responsible for all books drawn on this card.

Penalty for over-due books 2c a day plus cost of notices.

Lost cards and change of residence must be reported promptly.

Preface

This text-book is the outcome of an actual need in giving courses in Library Methods to teachers. There are excellent teaching outlines such as Miss Gilson's Course of Study for Normal School Pupils on the Use of a Library; Mr Ward's The Practical Use of Books and Libraries, for high school classes; and the Course of Study for Normal School Pupils on Literature for Children, by Mrs. Harron, Miss Bacon, and Mr. Dana; but there is no one text-book to put into the hands of normal school students. It is believed that such a text-book will be a saving of time and effort for both students and instructors.

The text has been planned for the use of students in normal schools and for teachers taking normal courses in summer schools. Its purpose is first to teach such students how to use books and libraries so that they may in turn impart this information to children in the schools; second, to help them acquire that knowledge of literature for children which a teacher must have in order to encourage in children an appreciation of literature. College and normal school courses in English literature do not generally put any emphasis on books that have been written for children and hence the teacher misses the very important and practical acquaintance with children's books that she ought to have.

Part III is reserved for the purely technical subjects of classification, cataloguing, etc., and of these subjects

only the elements necessary to the adequate administration of a school library are given. In no sense is this section a manual for librarians in general. It is hoped that the two chapters—"The Evolution of the Book" and "The History of Libraries"—will present in compact and convenient form an outline of the historical development of books and libraries. This development, no less than the historical development of school methods, equipment, etc., is an important part of the general history of education, and should be a part of the instruction given to students of Education.

It is advisable that students should have practical work with children while studying Parts I and II. Practice teaching will be possible in the Model School connected with the normal school. The best test of a student's grasp of the subjects in Part I would be a series of lessons in the use of reference books, the card catalogue, etc., given to the children in the grades. The more opportunity a student has for testing the principles given in the section on Literature for Children, through practical experience with the children themselves, learning their interests in books by talking over books with them, by reading aloud and story-telling—the more productive will be that part of the course. The giving of work in children's literature presupposes a collection of children's books, containing at least all the titles included in the book-lists given in the chapters covering the subject, and, if possible, other books as well. It will be impossible for students to do this part of the work adequately without access to such a Model Library.

The authors have tried to make specific acknowledgment of authorities wherever it is due, and in general wish to acknowledge their debt to all library literature.

They wish gratefully to acknowledge valuable suggestions and criticisms received from Miss Corinne Bacon, former head of the Drexel Institute Library School; Mr. Frank K. Walter, Vice-Director of the New York State Library School, Miss Martha Thorne Wheeler, formerly head of the Book Selection Department of the New York State Library; Miss Grace L. Betteridge, Head of Travelling Libraries Section, New York State Library; and Dr Edwin W. Fay, Professor of Latin in the University of Texas, all of whom have read the manuscript either in whole or in part

We are especially indebted to Mrs. Norman B. Morrell for the pen and ink drawings which we believe add greatly to the usefulness and attractiveness of the book.

Part I has been done jointly; Part II is the work of Miss Eaton; Part III is the work of Miss Fay

L. E. F.

February, 1915.

A. T. E.

The first edition of this text-book was printed from type and the type distributed. The edition having been exhausted and a second printing called for, the authors have taken the opportunity to re-arrange some chapters, to make a few revisions in the text, and as far as possible to bring the book-lists up to date. With the present kaleidoscopic changes in the prices of books, it has been impossible to do more than record the most recent prices found at the time of revision. By the time the book is off the press these prices will no doubt be out of date.

PART I
ON THE USE OF BOOKS

ON THE USE OF BOOKS

Chapter I

Main THE LIBRARY IN THE SCHOOL

History and Development.—In that now famous Special Report, 1876, of the U. S. Bureau of Education, on "Public Libraries in the United States of America; their History, Condition and Management," the history of the school library is duly recorded. The illuminating chapter on libraries in schools is entitled: "School and Asylum Libraries." The psychology of that title has some bearing on the early history of school libraries in this country. Ever to have been an object of charity or merely to have been considered a worthy thing in need of philanthropy, is to have begun development under a handicap; and, even in this day of progress, that idea about school libraries still prevails in some quarters and in the minds of some backward-looking administrators. The wonder is that school libraries have made the progress they have.

Before 1900.—A hundred years ago, in 1827, Governor DeWitt Clinton suggested to the New York legislature the idea of having a small collection of books in each school district, and in 1835 a law was passed empowering each district to tax itself for maintaining a library, this

library to be for the use of grown people chiefly and for school children secondarily. It is important to note that this was in no sense a school library nor were the books often kept in the school house. By 1828, \$55,000 yearly was being appropriated for these collections and in 1853 they reached their greatest growth of over a million and a half volumes, only continually to decline till 1881 when the number of books was a little over half a million, and the consensus of opinion was that the plan had been a failure not only in New York but in Ohio, Michigan, Indiana, Wisconsin and other states that had passed laws similar to those of New York for establishing school district libraries. Millions had been spent for books, with no provision for organizing nor housing them.

Massachusetts repealed in 1850 her school district statute adopted in 1837 and in its place passed a law permitting every town to tax itself for a public library, thereby launching the real tax-supported public library movement. From this change in the Massachusetts law can be traced the fact that Massachusetts and other New England states have served their schools through the public library more generally than have those states that developed school libraries from the old district legislation.

In 1892 school library legislation in New York state showed a distinct advance: "the law (1) made district libraries, school libraries; (2) required the school libraries to be kept in the school building; (3) required the appointment of a school librarian who was responsible for the care and use of the library; (4) required the district to raise locally by tax or otherwise as much money for the purchase of library books as it received from the state; (5) required, in order to receive state aid, that books

purchased must be approved by the State Superintendent of Public Instruction.”¹

This was typical of the development in most of the states that had originally passed laws for establishing school district libraries. During the last decade of the 19th century many of them were extending state aid to school libraries, other than those in cities, on a 50-50 basis, provided books were selected from state lists issued by the state department of education.

With the requirement that these collections of books now be kept in the schools it would seem that greater and more effective use should have been made of them; but conditions were not greatly improved over the days of the old district libraries because of at least three things: (1) no library quarters were provided, the books being usually shelved in the Principal's office; (2) no trained librarians were appointed; (3) the selection of books was still too dominated by the very poor and patently commercialized state lists of many state departments of education. Such were the general conditions before 1900 and even after. There were notable exceptions in some of the larger and more favored cities of the country where city public library systems were well organized and were doing work with schools.

In 1900 was made the first appointment of a library school graduate as librarian of a high school library,² but not until the publication in 1918 of the National Education Association's Committee Report on Standard Library Organization and Equipment for Secondary Schools, was

¹ N. Y. State Education Department. School libraries, their history, development, present purpose and function in our educational system. 1920

² Hall, Mary E. Development of the modern high school library. Library Journal, September 1915, v 40, p 631.

any impetus given to the requirement of appointing graduate librarians to all accredited high schools. This same report set up standards for housing and equipment and the selection of books, thus recognizing what the weak spots in the development of school libraries had been.

Types of Organization.—By the end of the nineteenth century school library organization had developed along three distinct lines: (1) *The Public School Library*—an outgrowth of the early district library, organized for the purpose of providing books for all schools in a city to be housed in the high school under the supervision of a librarian, with branches in each public school and many classroom collections: two well known examples are the Columbus, Ohio, Public School Library, founded in 1847 and the Albany, N. Y., High School Library, founded in 1868. (2) *The High School Library* organized under the Board of Education, housed in the school building under the supervision of a teacher or a librarian with training: examples, Detroit, New York City, Los Angeles. (3) *Public Library Branch in a High School*: examples, Cleveland, Ohio, Portland, Oregon; Buffalo, N. Y. (4) *School and Public Library*. In the smaller towns in various parts of the country a combined school and public library is often found: examples are Troy, Ohio and Canandaigua, N. Y.³ These types continue in force, with the third type modified in many places to a school library under a closer joint control of the Board of Education and the Public Library.

Within the present public school system, the elementary school, the junior high school, the senior high school, the rural consolidated school, needs in each case a library

³ Greenman, E. D. State aid for public school libraries. *Library journal*, June 1912, v 37, p. 310-16 and April 1913, v 38, p. 183-189

based on national standards in order to be accredited in fact as well as in name.

Present Standards—That some standards for secondary school libraries were needed, was felt by the department of secondary education of the National Education Association and a library committee was appointed by that department in 1915. The committee investigated actual conditions in high school libraries throughout the United States and made their findings known to school administrators. In 1916 at the meeting of the N. E. A. in New York City this committee reported, the association voted to continue the committee and authorized it to work on a program of library development. Professor Charles Hughes Johnston of the University of Illinois was chairman of the committee and laid the foundations of the final report, which, owing to his death, was issued in 1918 under the chairmanship of Professor C. C. Certain of the Cass Technical High School, Detroit.⁴

This report was endorsed by the American Library Association and printed by them in 1919, and in 1920, issued, with some minor changes for local use, by the New York State Library as Library School Bulletin 45. The report was also endorsed by the North Central Association of Secondary Schools and Colleges. It is an indispensable guide to the organization of an adequate library for: (1) Junior high schools; (2) High schools with enrolment below 200; (3) Four year high schools with enrolment between 200 and 500; (4) Four year high schools with enrolment between 500 and 1000; (5) Four year high schools with enrolment between 1000 and 3000.

The following requisites of a standard library organiza-

⁴ National education association. Standard library organization and equipment for secondary schools 1918.

tion are laid down in this report: (1) appropriate housing and equipment of the high school library; (2) professionally trained librarians; (3) scientific selection and care of books and other printed matter, and the proper classification and cataloguing of this material; (4) instruction in the use of books and libraries as a unit course in high school curriculums; (5) adequate annual appropriations for salaries and for the maintenance of the library, for the purchase of books and other printed matter, for the rebinding of books, for supplies, and for general upkeep; (6) a trained librarian as state supervisor to be appointed as a member of the state education department, as in Minnesota, or under the library commission in co-operation with the state education department, as in New Jersey.

EXERCISES.

1. Discuss the value of your school library. Is it a storage-place for the books or a workshop for the school?
2. State the conditions necessary for a school library to meet the needs of the whole school.
3. Report on the standards presented in the Certain Report and state wherein your own school library either meets these standards or falls short of them.

Chapter II

THE RELATION BETWEEN THE SCHOOLS AND THE PUBLIC LIBRARY

In 1896 the National Education Association formed a new department called the Library Department and thus recognized officially the growing feeling that the connection between the public schools and the public library was a vital one. In 1899 a circular was printed and distributed by the Association containing such statements as the following: "There should be most cordial relations between the school and the library. The librarian should know the school and its work in a general way as a very important part of her work, just as the teacher should know the library and its methods as a part of her work." "The community should be led to regard the library as a necessary part of a system of public education no more to be done without than the common school. The library should be made an indispensable adjunct of the school." In this way the Association emphasized the need for co-operation between schools and libraries. This feeling of the need for close relationship between school and public library has grown and in many cases has led to actual administrative co-operation. School libraries are being organized under the control of the public library or under the joint control of the school board and the public library. A notable development of co-operation is the

help which the county libraries in many places furnish to rural school libraries, supplying them not only with books but with trained library service.

The Place of the School and the Place of the Library in a Child's Education.—In the report of the National Education Association Committee on the Relations of Public Libraries to Public Schools, 1899, the point is brought out that the function of the school is to introduce children to the proper use of books, that it is the school that teaches them how to read and as far as possible what to read, while to the library belongs the task of stimulating them to wider reading, of helping them to form the reading habit. If the public library is to be the means of continuing a child's education after school days are ended, if it is to be the means of widening and deepening the love for good literature which the school has implanted, then we see that intelligent co-operation and mutual understanding are necessary between schools and libraries.

Help Teachers May Expect from the Public Library.

—1. SPECIAL PRIVILEGES IN DRAWING BOOKS.—Most public libraries give special privileges to teachers. They are often allowed to draw six or eight books instead of the two or three to which other readers are limited and to keep them for a longer time. In this way a teacher is able to have at hand a small working collection on a topic which her class is studying.

2. CLASSROOM LIBRARIES.—It is usual for good-sized public libraries to send out collections of books to classrooms in the city schools. These collections are called classroom libraries, sometimes circulating or travelling libraries, and consist of from 25 to 50 carefully selected volumes, suited to the ages of the children who are to use them. They are sometimes changed during the year,

sometimes the same collection is used throughout the year. The best classroom library contains not only books bearing upon the subject matter taught in the grade by which it is used, but also some of the best children's stories, poetry, fairy tales; books which tell the boy with mechanical tastes how to make furniture, or how to understand electrical contrivances; and best of all, some of the books which, written primarily for children, have taken their place in the ranks of real literature—Hawthorne's *Wonder Book*, Kingsley's *Water Babies*, Kipling's *Jungle Book*. The ideal situation is, of course, a central library, adequately equipped and supplied with books, in charge of a trained librarian. Unless however a school library is efficiently administered, more will be accomplished by a teacher using a classroom library in her own grade, than by sending children to a central library in the school building where the books are poorly arranged, carelessly selected and presided over by an older pupil or busy teacher who has no time nor thought to give to the work of the library. Even when children are near enough the public library to visit it and draw books there is still need for the classroom collections. The report of the National Education Association Committee on Instruction in Library Administration in Normal Schools, 1906, says: "The public library cannot take the place of the classroom library. The five or ten minutes which a child may have for reading at the close of a study period or during recess on a stormy day would be wasted on a journey to the general school library in another part of the building, while a trip to the public library would be out of the question."

On the other hand the use of the classroom library should not entirely supersede the child's visits to the pub-

lic library, where he gains a larger sense of the value of books.

3. EDUCATIONAL MAGAZINES.—Teachers can supplement the books which they draw from the public library by much valuable information to be found in the educational magazines. Many libraries have a long list of such magazines, most libraries take at least one; if not, the librarian could be induced to subscribe for one.

4. REFERENCE WORK—Librarians are glad to collect all the material which the library contains on a given topic and to make it easily available for the use of classes which the teacher may wish to send to the library for reference work.

5. PICTURE COLLECTIONS.—Many libraries make collections of pictures which are loaned to the schools. Pictures are clipped from old magazines, discarded books, railway and steamship guides and similar material which otherwise would be thrown away. These pictures are mounted on manila cards or sheets, classified, and loaned to teachers for classroom work. Thus a geography teacher may borrow a set of pictures illustrating life and customs in Japan; nature study classes may have the use of bird and flower pictures; or literature teachers may obtain a series of pictures illustrating Longfellow's *Evangeline*.¹

6. BOOK LISTS—Many libraries print lists of books for children which are invaluable as aids in book selection. Sometimes they are general lists including all classes of children's books, stories, poetry, biography,

¹ The following pamphlets will give valuable information about the care of pictures

Dana, J. C. The picture collection (In his *Modern American Library Economy*, Part 5, section 3) o. p.

¹ Salisbury, G. E. Picture collections in small libraries. Wisconsin Free Library Commission. Madison, Wis. o. p.

handicraft books; sometimes they are limited to one special subject, e.g., nature study, school gardens, games, stories for older girls, historical stories, etc. Sometimes special lists of books for teachers are published and notices of new books on education and of current educational publications are sent to the schools. A good way to promote co-operation is for each school to have a library bulletin board where lists of books recently added to the public library, notices of exhibits held at the library, special reading lists, and similar information of interest to teachers and pupils may be regularly posted.

7 TEACHERS' REFERENCE ROOM.—When space and funds permit, a special teachers' reference room is provided. Here teachers may find a well selected professional library, educational magazines, a model library of children's books and lists of current educational publications.

8. SPECIAL ASSISTANTS FOR WORK WITH SCHOOLS—These various forms of co-operative activity with the schools require a large portion of some one's time, and, in libraries where this work is extensively carried on, there is a member of the staff whose special work it is to promote co-operation between schools and library. Besides superintending the sending out of classroom libraries, she visits the schools, talks to the children about books and tells them how they may use the public library, tells stories perhaps to arouse their interest and gets suggestions from the teachers about the kind of help the library can give them in their work. In the children's room at the library she arranges various exhibits of pictures, textiles, bird-life, minerals and flowers. This assistant keeps in close touch with school matters as well as with library affairs.

9. INSTRUCTION IN THE USE OF THE LIBRARY.—One of the duties of the special assistant for work with schools, and one which is usually willingly assumed by the librarian herself when there is no such special assistant, is the giving of a simple course of instruction on the use of the library. She may teach the children themselves, or she may reach them indirectly by instructing teachers and normal school students.

Help the Library May Expect from Teachers.—1. KNOWLEDGE OF THE LIBRARY'S RESOURCES.—Teachers should take the trouble to familiarize themselves as far as possible with the resources of the public library, finding out what it contains that may be of service to them and to their pupils. This familiarity will also prevent the irritation arising when pupils arrive in eager quest of a book the teacher has recommended. Told that the library does not own it, they gaze sceptically at the desk attendant and murmur doggedly: "But Miss Blank *said* the book was here."

2. CARE IN RECOMMENDING BOOKS TO CHILDREN.—If teachers thoughtlessly or through ignorance recommend books by poor or mediocre authors, the child's confidence in the public library is severely shaken when he is told that none of their books are on the library shelves. If in doubt regarding the merits of certain writers of books for children, teachers should consult approved lists. Librarians are always glad to answer inquiries.

3. CARE OF BOOKS.—Much wear and tear on public library books would be saved if children were taught the care of books in the school room. (See Chapter 3.)

4. PROMPT NOTIFICATION OF THE LIBRARY WHEN REFERENCE MATERIAL IS DESIRED.—If a class is com-

ing to the public library to work up a topic, notice should be sent ahead so that the librarian may look up material and place it on reserve. Otherwise the first child to arrive carries off the best references and the pupils following must content themselves with second or third best.

5. DEFINITE INSTRUCTIONS TO CHILDREN.—Teachers should give children clear and definite instructions before sending them to the library to look up reference topics. If the child knows what he wants and what he is to do with the information when he gets it, library assistants are able to help him intelligently and quickly. If teachers would make an effort to impress upon their pupils the fact that they do not intend certain topics to be looked up at the public library, as for instance, "What poetry means to me," much time and energy would be saved. It is hard for the librarian to refuse all help and by doing it she is apt to drive the child away from the library. In such cases the responsibility of deciding whether or not help should be given belongs to the teacher and should not be laid upon the librarian.

TOPICS FOR DISCUSSION.

1. Definite ways in which the public library in your home town can help the school.

2. Discuss the branch of co-operation between the library and the school that seems to you most useful and tell why.

3. What is the average teacher's attitude toward the public library? Does this attitude help or hinder co-operation?

4 How far is your public library co-operating with the schools? Could it do more with the resources at its command?

Chapter III

THE PHYSICAL BOOK

We take books so much as a matter of course and our use for them is so largely for the particular share the author has had in their creation, that we rarely stop to consider their physical features. It is important, nevertheless, to know something of the make-up of a book in order to use it carefully and intelligently.

How a Book is Put Together.—Take a sheet of paper, ordinary typewriter size, and fold it as follows: first, end to end, making two leaves and four pages; second, end to end, making four leaves and eight pages;

Illustration 1

third, end to end, making eight leaves and sixteen pages. Then take a paper knife and cut the two top folds and the two lengthwise folds on the right, just as you would cut the leaves of a book. The result is a group of leaves called a section. Now, if you will examine your text-

book you will see that it is composed of a number of these sections which have been sewed together along their folded edges. In the majority of books that are now manufactured this sewing is done by a machine

Illustration 2

and the result is not so durable as when a book is properly sewed by hand. After the sections have been drawn together in this way, a piece of thin cloth, wider than the back by an inch on either side, is pasted over the back. This cloth protects the stitches and also provides

hinges for attaching the book to its cover. A piece of strong paper, just the width of the back, is then pasted over the cloth. The cover, which has previously been made, is now laid open flat, the back of the book is fitted into the back of the cover, and inch strips of cloth, which were left extending beyond either side of the back, are now pasted down to the sides of the cover. The outside half of each fly-leaf is

Illustration 3

then pasted down on the front and back covers, hiding the cloth strips and putting the inside finish to the cover. If you will look at almost any text-book, you will be able to recognize the strips of cloth beneath the paper. Such

is the method used in binding the largest number of our books. It is not the best nor the most durable method, but on account of its greater cheapness it is widely used. (See chapter 30 for the best binding for libraries.) You can see that these strips of thin cloth cannot stand the strain of very rough handling and hence books are constantly being torn from their covers. It is due to machine sewing and defective kinds of hand sewing that the leaves and sections are so often loosened.

Illustration 4

Size of Books.—Books are designated as “folio” (fol); “quarto” (4to); “octavo” (8vo); “duodecimo” (12mo); “16mo”; “32mo.” These names refer to the

Illustration 5

number of times a sheet of paper has been folded to form a single section of a book, as follows: “folio,” the sheet folded once, usually at the short axis, making two leaves and four pages;

“quarto,” the sheet folded twice, making four leaves and eight pages; “octavo,” the sheet folded three times, making eight leaves and sixteen pages; 16mo, the sheet folded four times, making sixteen leaves and thirty-two pages, etc. Formerly these names indicated the size of a book

more accurately than they do now, because then, sheets of book paper were uniformly 20x24 inches and hence each fold was an accurate division of that measurement, the octavo page being 6x10 inches. These names are not accurate now because book paper is made in sheets of various size. The following table gives the symbols and sizes of books according to the scale now used.

Folio—F—a book from 30–35 centimeters outside height.

Quarto—Q—a book from 25–30 centimeters outside height

Octavo—O—a book from 20–25 centimeters outside height.

Duodecimo—D—a book from 17.5–20 centimeters outside height.

Sixteenmo—S—a book from 12.5–15 centimeters outside height.

Care of Books.—If you will learn and practice intelligent care in handling machine sewed and bound books, they will last longer. This kind of economy not only aids the individual teacher but it helps the entire school. If money does not have to be spent replacing books worn out before a reasonable time, the school library can be enlarged by purchasing more books. Besides *Economy*, another important reason for handling books with care is *Cleanliness*. No one likes to use a book that has been marked, thumbed with soiled hands, or that is “dog-eared.” The third and most important reason for using books with care is that by the teacher’s example, the child is trained in *economy*, *cleanliness*, and particularly in *unselfishness*, if he is made to realize that he must have regard for his fellow pupils who must also use the books.

How then shall we handle books carefully?

1. Open a new book properly by holding it on a table back downward. Then press the front cover down until it touches the table, next the back cover, holding all the leaves first with one hand, then with the other. Then press down first a few leaves at the back, then a few leaves at the front until the book lies open at the middle. This process should be done a number of times until the stiffness is removed from the back of the book.

2. Do not lay an open book face downwards.

3. Never mark a library book. Do not turn down the corner of a leaf for a book-mark. That is "dog-earing." Do not moisten the finger to turn over a leaf, it soils the leaf and may spread contagion. Do not drop a book, it breaks the back.

These "don'ts" seem too obvious to mention, yet a great number of people disregard them entirely. Children observe their teachers' habits to a great extent and will learn something from observation but they need to be given definite instruction in the matter. The two following verses, printed on book-marks and given out to pupils to learn, very often influence them more than a dry, matter of fact talk on the subject:

THE LIBRARY GOOPS

(With apologies to Gelett Burgess.)

The *Goops* they wet their fingers
To turn the leaves of books,
And then they crease the corners down
And think that no one looks.

They print the marks of dirty hands,
Of lollipops and gum,

On picture-book and fairy-book,
As often as they come.

Caroline M. Hewins.

“YOU ARE OLD, LITTLE BOOK”

“You are old, little book,” the small boy said,
“Yet your pages are still clean and white,
Your covers are stiff and your corners are straight
Do you think at your age it is right?”

“In my youth,” said the book, “I came into the hands
Of children who ‘handled with care’;
They opened me gently, their fingers were clean,
My margins they kept clean and fair.

“They never used pencils as book-marks, nor tried
To pull me apart in their strife,
With such kindly treatment my strength and my looks
Will last me the rest of my life.”

Anne T. Eaton.

Parts of a Book.—Knowledge of the structure of a book will help us to take care of it, but we need to know its parts if we wish to use it easily and intelligently. Books have not always had as many parts as they now have and it would be an interesting study to trace the development of the book, but for our present purpose such a study would lead us far afield. At the present time books vary in the number and arrangement of their parts. This book, for instance, is composed of a title-page, copyright date, preface, table of contents, text, and the index. Other books may have besides these, one appendix or more.

TITLE-PAGE.—The purpose of the title-page is more than the word implies. It not only contains the title of the book, but it usually records the name of the author, the edition, if it is other than the first, the place of publication, the name of the publisher and the date of publication. The title as a rule indicates the subject of the book, but this is not always true, if you will recall various titles of Ruskin; e.g., *Stones of Venice*, *Sesame and Lilies*. Just below the author's name there usually follows either the bare statement of his profession or a record of a previous book he has written, thereby establishing some evidence of his ability and authority to write.

The important fact that a book is a second or third *edition*, a "revised" or "enlarged" edition, is usually stated on the title-page. It means that the text has either been changed or enlarged since the previous edition was printed.

At the bottom of the title-page, the *place of publication* and the *name of the publisher* are generally stated. These are important facts because the place and the name of an old and established firm of sound reputation indicate a reliable product.

The *date* on the title-page indicates simply when that particular copy of the book was printed and is not so important as the date of copyright¹ which tells when the book was first published and therefore how old it really is. The copyright date is usually printed on the

¹ Copyright is the exclusive right secured by law to authors and artists to publish and dispose of their several works for a limited time. In the United States the time is 28 years with the right of renewal. Copyright is obtained upon the payment of a fee of one dollar at the Copyright Office, with an application for registration, and upon depositing two copies of the work in the Library of Congress.

reverse of the title-page In scientific works, particularly, it is important to notice the date of copyright, otherwise you cannot tell whether the text of the book is based on recent investigation or not.

PREFACE.— Unless the book has a dedication, the preface comes next, stating the author's reasons for writing the book, what he has attempted, and to what people he is under obligations for assistance.

TABLE OF CONTENTS.— Next comes the table of contents, which very often is merely a list of the chapter headings arranged in the order of their occurrence, with a statement of the pages covered by each. Sometimes this table is fuller and gives an outline in detail of the text

LIST OF ILLUSTRATIONS.— If a book is illustrated with pictures or maps, a list of these illustrations, most frequently in the order of their occurrence in the text and with paging indicated, is usually printed on the first odd numbered page following the table of contents. Such a list is valuable in books with fine and numerous illustrations, as a means of verifying the completeness of the illustrations in a particular copy. For a book may lack an important illustration either through some mistake when it was originally bound, or through subsequent loss or theft

INTRODUCTION.— It is often necessary for an author to contribute information leading up to his subject — a sort of preliminary discourse, something more elaborate than a preface, that bears directly upon the development of the subject. This introductory matter is either arranged separately from the text and called an Introduction, or it may be put in as Introductory: Chapter

I. In either case it is regarded as a part of the text proper

TEXT.—The text is the main part or body of the book, as distinguished from the preface, the title-page and other parts. It is divided into chapters. These usually have headings used as running titles and printed at the top of the right hand page, while the book title is printed at the top of the left hand page. Insert headings in a different type are sometimes placed within the paragraphs to give a running synopsis. Important matter that cannot be incorporated in the text is often printed in finer type as a foot-note at the bottom of the page or as a note in a section at the end of the book. These notes are referred to either by numerals, or letters, or by the device of a star, a dagger, or a double dagger.

APPENDIX.—The appendix contains matter supplementary to and illustrative of the text. Examples may be found in Bryce's *American Commonwealth* and Fiske's *History of the United States*.

INDEX.—An index is "a detailed alphabetic list or table of the topics, names of persons, places, etc., treated or mentioned in a book or series of books, pointing out their exact positions in the volume" (*Century Dictionary*). In some books, the index is arranged in more than one alphabetic list; e.g., in Donaldson's *Growth of the Brain*—where the subjects are in one list and the names of people mentioned in the text, in another. In a book of poems there are usually two indexes, one of titles and another of the first lines of the poems; e.g., Tennyson's *Poetical Works* (Cambridge edition). In a volume of collected poems from various authors, there

is usually a third index of the names of the authors; e.g., Page's Chief American Poets. In Bartlett's Familiar Quotations there are two indexes: one of authors cited, and a second index of words, not subjects, with enough of a phrase to identify the quotation in the text; e.g.,

Pit, monster of the, 329
 they'll fill a, as well as better, 87
 whoso diggeth a, 829

BOOKS IN SETS.—Besides these types of indexes for single volumes, books in sets have various arrangements as follows:

1. A book in more than one volume with the index in the last volume: Example — Bryce — American Commonwealth.

2. A book in more than one volume with an index in each volume: Example — Stubbs — Constitutional History of England.

3. A book in more than one volume with an index in each volume and a general index in the last volume. Sometimes the general index is in a separate volume: Rhodes — History of the United States, 6 vols. and Cambridge Modern History, 14 vols.

There are still other arrangements, variants of the above, but they are unusual and will not be found very often in books that are used in the average library.

Each entry in an index is followed by a number which refers to either the page or the paragraph in the text where the information is to be found. The usual method is to refer to the page rather than the paragraph. When an index has any feature different from the usual method, directions for its use are generally printed in

smaller type at the beginning of the index. The following are typical entries with abbreviations that are commonly used. Consult a dictionary for the meaning of the abbreviations:

From the index to Thatcher and Schwill — Europe in the middle ages.

History, divisions in, *i f*
 Irish missionaries, 69, 104 *ff*
 Italian arts, 630-35

From the index to Hall — Adolescence. 2 vols.

Agriculture, i. 172 *et seq*

From the index to Bryce — American Commonwealth, 2 vols.

American Constitution. *See* Constitution

Federal courts *See* Judiciary (Federal)

Legal profession. *See* Bar

Lynch law, i. 338; ii. 617

Tammany organization, ii 103, 106, 189, 195, 381 *sqg*

Thirteen original British colonies, i. 19, 249; each a self-governing commonwealth *ib*

ATLAS INDEXES.—An index to an atlas enters the names of all places mentioned in the atlas with a reference after each name to the map and the position on the map where each place can be found. Some atlases are fuller and give after each entry such statistical information as population, area, railway station, express office, telegraph, etc. The following are typical entries from atlases that should be in every college library:

Century atlas:

Corinth, Gulf of, Greece 99 F 4

Greece (see Gortho) 99 G 5

Mississippi, 2111 43 G 1

38 THE USE OF BOOKS AND LIBRARIES

Rand, McNally & Co.—Commercial atlas of America.
Chicago c 1925

Example from the map of New York (State)

Plattsburg, Clinton, M-12 (Rys 40, ff)*.†‡

£ 10909

Pleasant Brook, Otsego F-20 mail Cherry Valley.

. 127

Shepherd, W. R.—Historical atlas:

Corinth, in Greece 15 C b

Corinth, in Miss. 208 C c

Corinth, Gulf of 14 C a

CONCORDANCE.—A concordance differs from an ordinary index in purpose and therefore in what it contains. The purpose of a concordance being primarily to enable a student to study the text of a book very thoroughly, *words* rather than *subjects* are indexed. There are concordances of the Bible, of the works of Shakespeare, Dante, Browning and other great authors. In these concordances all words in the texts are listed in alphabetical order, with citations of the passages in which the words occur.

EXERCISES AND PROBLEMS.

1. Get from your librarian a book that is ready to be discarded. What is left of it take carefully apart and see for yourself how it was put together. Write out an explanation of the process you have discovered.
2. Suggest other ways than those mentioned in the text of training children to handle books carefully. Test your suggestions on pupils in the model school.
3. What is the date of publication of the copy of Bryce's American Commonwealth in your college library?

When was the book first copyrighted? How many editions have there been? State in what part of the book itself this information is given.

4. Read the preface to Gayley's *Classic Myths in English Literature*. To what other book is the author particularly indebted? For what purpose was the book written? Consult the preface of Monroe's *Source Book of the History of Education*, Greek and Roman period. What is the author's purpose in writing the book? Does he indicate his plan?

5. Look in Watts' *Vegetable Gardening* for an illustration of "various types of hand weeders," and for an illustration of "paper pots and the equipment for making them." Consult Earle's *Two Centuries of Costume in America* (2 vols.) for illustrations of the following: a Puritan dame; slashed sleeves; coat and waiscoat; business suit; stomacher; bonnets; Quaker hats; uniform of a Continental officer. Look in Bulfinch's *Age of Fable* for an illustration of the Laocoön. Compare the list of illustrations in Bulfinch with the list of illustrations in Gayley's *Classic Myths*. Which has the better arrangement?

6. Consult the index of Gayley's *Classic Myths*: (1) For the entry *Hercules* and find to what English poem there is a reference. (2) For a poem of E. C. Stedman's and on what pages quoted. (3) For the attributes of *Apollo*. (4) For the meaning of *Nirvana*. (5) Is the god of war entered under *Ares* or *Mars*? Why? (6) What great series of operas is based on the *Nibelungenlied*?

7. Consult the index of Fiske's *Old Virginia and Her Neighbors* (2 vols.). On what pages do you find the longest account of "horse-racing"? The "London Com-

pany"? In the index of Holmes' Autocrat of the Breakfast Table find the following entries: minds; woman; women; voices; authors; conversation. How do such entries differ from the entries in Fiske's Old Virginia and Her Neighbors and in Bryce's American Commonwealth?

8. In the Oxford Book of English Verse find the two poems beginning: "Be it right or wrong these men among," and "Out of the night that covers me." Give authors and titles of the poems. Can you find the same poems in Palgrave's Golden Treasury? Can you find in both these collections the poem beginning: "That time of year thou mayest in me behold"? Give author. Find in Bartlett's Familiar Quotations the following: (1) A quotation about *Autumn*; (2) "the course of true love never did run smooth." State author and particular work from which it is taken. (3) Select a famous quotation from Longfellow. (4) Name three other American poets, selections from whose works you find.

9. Using the Century Atlas, find Louisville, Ky., in the index. Find it on the map and interpret all the statistical information given about it. Consult the index of Shepherd's Historical Atlas and locate on the map the following: Hagerstown; Ilissus River; Scala Santa; Toulouse in France.

Consult Bartlett's Concordance to Shakespeare and see whether he records Shakespeare's use of "had better" or "would better." In what play of Shakespeare's does the word "mobled" occur?

Chapter IV

GENERAL REFERENCE BOOKS

The Reference Collection.—One of the purposes of a library is to provide a place where people may go to find information, to “look up things.” This purpose is served by the “reference collection,” which may range in size from a copy of Webster’s Unabridged, standing on a window sill in a schoolroom, to the well-filled shelves around the walls of a large reading room in a library. In either case we should learn where and how to look for material.

General Reference Books.—This chapter deals with the backbone of the reference collection, the books which are bought first and used most, the general reference books. By general reference books is meant, of course, those books which treat of all kinds of subjects, as dictionaries and encyclopedias. A few of the most important will be discussed.¹

DICTIONARIES.—Webster’s New International Dictionary of the English Language, based on the International Dictionary of 1890 and 1900, now completely revised in all departments, including also a dictionary of geography and biography, being the latest authentic quarto edition of the Merriam series. W. T. Harris, editor-in-

¹ A very full list of reference books, both general and special, may be found in I. G. Mudge, *Guide to Reference Books*, new edition. Chicago. 1928. American Library Association.

chief. Springfield, Mass. Merriam. 1927. \$16. Reprint, with prefatory list of new words.

"Contents: (1) Dictionary, including in the same list both the usual dictionary words and also foreign phrases, abbreviations, proverbs, noted names of fiction and all proper names except those in the biographical and geographical lists; (2) Appendix: (a) Pronouncing gazetteer, (b) Pronouncing biographical dictionary, (c) Arbitrary signs used in writing and printing, (d) Classified selection of pictorial illustrations . . . The oldest and most famous American dictionary, a good all round dictionary with no marked specialization or bias, well edited, reliable, and noted particularly for the clearness of its definitions . . . A special feature in the arrangement is the divided page, containing in the upper part the main words of the language and in the lower part, in finer print, minor words, foreign phrases, abbreviations, etc. . . ." *Kroeger and Mudge*.

The first dictionary to be bought for the school library.

New Standard Dictionary of the English Language; designed to give . . . the orthography, pronunciation, meaning and etymology of all the words and the meaning of idiomatic phrases in the speech and literature of the English speaking peoples, together with proper names of all kinds, the whole arranged in one alphabetical order Isaac K. Funk, editor-in-chief. N. Y. Funk and Wagnalls. 1927. \$16.

"A serviceable one volume work, the most recently revised of American dictionaries and therefore often the most useful for new words. Its special feature is emphasis upon current information, i.e., present day meaning, pronunciation, spelling and the subordination of the historical to the current information. . . ." *Kroeger and Mudge*.

Both dictionaries are illustrated by cuts inserted in the text and by plates.

The Century Dictionary and Cyclopedia, with a new atlas of the world; a work of general reference in all departments of knowledge. William Dwight Whitney and Benjamin E. Smith, editors-in-chief. Rev. ed. 12 v. N. Y. Century Co. 1911. o.p.

"The plan includes three things: the construction of a general dictionary of the English language which shall be available for every literary and practical use; a more complete collection of the technical terms of various sciences, arts, trades, and professions than has yet been attempted;—and the additions to the definitions proper of such related encyclopedic matter with pictorial illustrations, as shall constitute a convenient book of general reference." (Preface to 1st edition.)

Volumes 1–10 contain the dictionary proper, volume 11, the cyclopedia of names, including geography, biography, mythology, history, ethnology, art and fiction; volume 12, the Century atlas.

The most comprehensive American dictionary. It is fully illustrated and is encyclopedic in character, giving fuller definitions than is usual in dictionaries.

DESK DICTIONARIES —Good desk dictionaries are:

Webster's Collegiate Dictionary. Merriam. \$5

Practical Standard Dictionary of the English Language. 1925. Funk. \$5.

Published also as the College Standard Dictionary.

Fowler, H. W., and Fowler, F. G. Concise Oxford Dictionary of Current English. 1924. Oxford Press. \$3.25.

ENCYCLOPEDIAS —The New International Encyclopedia; 2d ed. by F. M. Colby & Talcott Williams. 23 v. N. Y. Dodd, Mead & Co. 1914–16. \$156.

"The 1922 issue is printed from the same plates, with some changes throughout and the addition of a new volume, v. 24, containing: (1) History of the War, a revision and extension, with index, of the War article formerly included in v. 23, (2) Population figures, United States 1920, and Great Britain 1921, (3) Courses of reading, formerly included in the supplement. Changes made in v. 1-23 are of two main kinds. (a) changes in the plates, e.g., insertion of 1920 census figures, dates of death in biographies, references from the main alphabet to the War history in v. 24, etc., and (b) new pages added to bring to date some important articles. Not needed in the library which has the 1914-16 issue." *Mudge*.

"The New International Encyclopedia has been reissued in a cheaper edition of 13 v made up of the original 23 v and the two supplementary volumes of 1924 rebound in double volumes. There is no change in the text but the 13 v set is sold for \$105." *Mudge*.

Perhaps on the whole the best encyclopedia for ready reference. It furnishes reliable information, full enough for all ordinary purposes, without being too technical for popular use. There are excellent lists of additional references at the end of each important article. It is fully illustrated. It may be supplemented by the New International Yearbook, a compendium of the world's progress. Published annually since 1907. N Y. Dodd, Mead & Co \$6.75 a volume. A supplementary volume, unnumbered, contains courses of reading and study.

Encyclopedia Americana: a library of universal knowledge . . . 30 v. N. Y. and Chicago. Encyclopedia Americana corp., 1918-20. \$180.

Similar to the New International. Especially full on subjects in the fields of science and technology. Fully illustrated. Contains signed articles and lists of references at the ends of some of the articles.

Encyclopedia Britannica. Ed. 13. 32 v. Cambridge (Eng.) and N. Y. Camb. University Press. 1926. \$186.00. New form edition in 16 v. \$99.20.

The best and most scholarly encyclopedia. Indispensable to the large library, the university, college and large normal school library, but too complete and scholarly for popular use. The arrangement is by general rather than specific subject, the index volume referring to the place in the general alphabet where a specific subject may be found. Although the 13th edition arranges material by smaller subjects than the earlier editions, it is still necessary to refer constantly to the index volume in order to be sure of finding all material on a subject and in order to use the encyclopedia intelligently. The signed articles are by well-known specialists and valuable bibliographies are appended.

The following less expensive encyclopedias are suggested for school libraries which cannot afford one of the larger ones:

Everyman Encyclopedia; ed. by Andrew Boyle. (Everyman's library.) N. Y. Dutton. 12 v. \$18.

American subjects treated less fully than English and with occasional inaccuracies.

World book; organized knowledge in story and picture; ed. by M. V. O'Shea, E. D. Foster and G. H. Locke. Chic. and Toronto. Quarrie. 1924. 10 v. \$57.50.

"An excellent encyclopedia for readers who are not quite old enough to use the New International." *Mudge*.

Appleton's New Practical Encyclopedia; a new work of reference based upon the best authorities, and systematically arranged for use in home and school; ed. by Marcus Benjamin and others. New ed. rev. and enl. with

history of the World War. N. Y. Appleton. 1920
6 v. \$30.

Compton's pictured encyclopedia. 6th edition. Chi-
cago. F. E. Compton and Co. 1925 10 v. \$55.

"Intended for children and young people from ten
years of age on . . . There are hundreds of interesting
illustrations . . ." Standard catalog for high school li-
braries.

One Volume Reference Books.—Champlin, J. D. ed.
Young Folks' Cyclopedia of Common Things Ed. 4,
rev and enl. N. Y. Holt. 1916. \$3.

Champlin's series of young folks' cyclopedias are ex-
cellent for work with children. They contain brief,
simply written articles and are illustrated. In addition
to the Cyclopedia of Common Things, the most useful
are

Champlin, J. D. Young folks' cyclopedia of liter-
ature and art. Holt. \$3.

Champlin, J. D. New Champlin cyclopedia for
young folks: Persons; ed. by Lincoln MacVeagh.
1924. Holt. \$5.

Champlin, J. D. New Champlin cyclopedia for
young folks: Places and events. 1925. Holt.
\$5.

American Year Book; a record of events and progress.
N. Y. Appleton. \$7.50.

"An excellent yearbook, made up of long signed ar-
ticles by specialists . . . Each article covers its subjects
in all countries, but aims especially to record progress in
the United States." *Kroeger*.

Not published 1919-24.

Statesman's Year Book. London. Macmillan. \$7.50.

A valuable annual containing "statistical and descriptive information regarding all the countries of the world and revised every year. It has a high reputation for accuracy and is the most important of the yearbooks. Arrangement: British empire; Foreign countries; alphabetically. Refers at end of each country to statistical and other books of reference concerning it. Index." *Kroeger*.

Statistical Abstract of the United States, issued by the U. S. Bureau of Statistics. Washington. Government Printing Office. \$1.

A mine of useful information. "Includes statistics on area, natural resources, population, education, agriculture, forestry, fisheries, manufacturing, mines, occupations, labor, wages, internal communication and transportation, merchant marine, shipping, foreign commerce, prices, money, banking, insurance, public finance, national wealth, army, navy, civil service, pensions, statistical record of the progress of the U. S., commercial, financial and monetary statistics of the world. Statistics given in tables covering period of several years, usually about 15 or 20; some tables run back to 1800 or 1789." *Kroeger and Mudge*.

Newspaper Almanacs.—A useful reference book within the reach of even the smallest library is a good newspaper almanac. These almanacs usually cost fifty cents and contain a vast amount of information on all sorts of subjects. Recent statistics, political, educational, agricultural; astronomical information; weights and measures; college and university presidents; athletics; election returns; foreign governments; are some of the topics included. The most useful is the World Almanac. N. Y. World. 50 cents in paper, cloth \$1.

The above are a very few of the standard reference

books, yet even in selecting these there is room for discrimination. Because the Britannica may be the standard encyclopedia, it does not follow that the school library should purchase this expensive work, when the New International or the Americana will serve school purposes better. While the New International and the Americana supplement each other to a certain extent, it is hardly wise for the school library, unless its resources are large, to buy both. And the library having either the New International or the Americana, naturally need not add one of the smaller and less valuable cyclopedias

Points to be Considered in Judging a General Reference Book.—There are certain points to be considered in judging general reference books, most of which you will find illustrated in those cited in this chapter. First, the editor or editors, are they authorities? Second, the date, is the book recent, or must it be supplemented by other material to bring it up to date? If it is an encyclopedia, are the articles signed, and are there bibliographies, that is, references to additional material at the end of the articles? Is the system of cross-references satisfactory? That is, are you referred from one part of the work to others which contain related material, or if you turn to one heading or spelling not used are you referred to one which is? Examples: *Bee-balm*, see *Oswego tea* (Americana). *Mulock*, *Dinah Maria*, an English author, see *Craik*, *Dinah Maria* (New Int.). *Machine*, *machinery* (*engineering*). See *Mechanical power-machines*; *Metal working machinery*, *Wood working machinery*; etc. (New Int.). *Kuyyp*, *Albert*. See *Cuyyp*, *Albert* (Americana). *Cynics*, at the end of the article on cynics we find, See *Cyrenaics* (Americana).

How to Use Reference Books.—Before attempting

to use a reference book, students should devote a few moments to reading the title-page, glancing over the preface or introduction, and looking for special features, such as indexes, cross-references, bibliographies, etc. If abbreviations are used, look for a list giving the full names of the works indexed. A few minutes given to a calm examination of the book before using it, whether in working out a problem in this course or in looking up some question for your own purpose, will save time in the end and keep you from a fruitless search for a magazine called "Ind" or from wondering why you cannot find references to magazine articles in a volume whose title-page clearly states that it indexes only books.

EXERCISES.

The questions in the first group are to be answered with the aid of dictionaries only, those in the second group with the aid of encyclopedias and the other general reference books mentioned in this chapter. In answering questions in group 1, any one of the three dictionaries mentioned may be used. The best results, however, will be obtained if the students have access to two or all three, and are thus able to compare information given, as to amount, form and place (i.e., in main alphabet, appendix, etc.). While most of the answers to the questions in group 2 can be found by using two or three only of the reference books cited, if the students have access to them all they will get valuable practice in choosing the best place to look for the special kind of information for which the questions call.

Group 1: Dictionaries.

1. Find an explanation of the phrase "laissez faire" as used in political economy.

2. Who was Sir William Harcourt? When did he die?

3. Find a full definition of *alembic*.

4. What are the colors of the spectrum? Can you find them illustrated?

5. Give the etymology of the word *balance*. What can you find about the word *gumption*? Can you find an explanation of the origin of the phrase "set the river on fire"? How many meanings can you find for the word *clever*? Are they all in equal use? Look up the word *pound* (noun). How many meanings do you find?

6. What is the meaning of each of the following abbreviations? Give the word or words for which they stand: *ibid.*; *e g.*; *I N R I.*; *M A.*; *viz.*; *R.S.V.P.*; *dwt*

7. What is the meaning of the expression *sotto voce*? From what language does it come? Of *deus ex machina*? Of *Utopian*? Of *soi-disant*?

8. What is Xingu? What is the Mahabharata? How high is Mount Mitchell (N C)?

9. Who was Haroun-al-Raschid? Baron Munchausen? Moll Flanders? Fiona McLeod? Who was called the "Scourge of God"?

10. What is the meaning of *soccer*? Of Hepplewhite?

Group 2: Other Reference Books.

1. When did Constable, the English landscape painter, live? Name some of his paintings.

2. Who is the governor of North Dakota, and what is his salary? Who is president of the Argentine Republic? Find a summary of the Constitution of California.

3. Who wrote "Home, Sweet Home," and when did it first appear?

4. What was the Wall of Severus?
5. What was the average price per ton of anthracite coal in the United States two years ago?
6. Find a simple, well illustrated article which would help a child to write a composition on leaves, stems and buds.
7. In how many places in the encyclopedia (use more than one encyclopedia) is it necessary to look to get all the material about the Iroquois? Are there references from one heading to another?
8. What can you find about Anglo-Saxon marriage laws?
9. What was the population of the County of Bedfordshire (England) at the last census? What is the national debt of Italy? Of Germany?
10. What is meant by the personal equation?
11. What reference book would you recommend to a 7th grade child who wished to find material on Sir Walter Scott?
12. What is the form of government in Montenegro? How large is Denmark's navy?
13. Mention three facts in connection with the American buffalo. Do you find any references for further reading?
14. How many normal schools, including both public and private, are there in the United States? How many building and loan associations were there in the State of New York in 1925?
15. Find an article on transmission of power (electric) at long distances. Is it illustrated?
16. What is the name of the British ambassador to the United States?
17. How much cotton was exported by the United

States in 1925? What was the amount of internal revenue collected in the United States in 1915?

18. Who is the president of Tulane University?

19. Where can you find a list of the members of the French Academy, known as the Immortals?

20. How much money did your State spend last year on public roads?

21. What are the names of the United States Senators and Representatives from your State? What is the rate of postage to France?

22. Where can you find something about aviation during the past year? Who holds the lawn tennis championship for the United States?

Chapter V

SPECIAL REFERENCE BOOKS

In the preceding chapter we have considered examples of reference books which deal with all kinds of subjects; in this chapter we shall discuss special reference books, that is, books written to give fuller information along a certain line than is furnished by the general reference books.¹

Biography.—

Thomas, Joseph. Universal pronouncing dictionary of biography and mythology. Ed. 4 rev. 2 v. Phil. Lip-pincott. 1915. \$15.

“The most frequently useful of the general biographical dictionaries in English. Comprehensive, includes men and women of all nations and periods, including many still living; names from the Greek, Roman, Teutonic, Sanskrit and other mythologies are also included. Articles in general are brief, though there are some long articles, pronunciation is marked and there is some bibliography, though this feature is not important.” *Kroe-ger and Mudge*.

Century Cyclopedia of Names. (Vol. 11 of the Century Dictionary. New ed. N. Y. Century Co. 1911.)

¹ The books in this chapter have been selected for study, as valuable and representative, and as furnishing good practice in the use of reference books. The list as a whole is not meant as a guide in the selection of a school library. For a list of reference books for a high-school library, see chapter 14 and the recommended lists on page 389. College libraries will contain all or most of the books mentioned in this chapter.

"A useful and reliable reference book for names Gives brief articles and indicates pronunciation This edition contains two alphabets, the first of which is a reprint of the original list of names in the first edition, with some revisions and changes, especially in statistics, population figures, etc., while the second is a reprint from the supplementary list of 3,000 new names and new matter about older names, which was appended to volume 2 of the 1909 supplement to the Century dictionary" *Kroeger and Mudge*.

Dictionary of National Biography. Index and epitome, ed. by Sir Sidney Lee. N. Y. Macmillan. 1903. \$6 50

The Dictionary proper, edited by Sir Leslie Stephen and Sir Sidney Lee, in 63 volumes with 3 supplementary volumes, is the most authoritative work on British biography. It is confined to Great Britain and no living persons are included. The Index and Epitome gives concise biographies of all persons included in the main part of the Dictionary and is better for the small library than the complete work.

Champlin, J. D. New Champlin cyclopedia for young folks: Persons; ed. by Lincoln MacVeagh. N. Y. Holt. 1924. \$5.

Brief, simply written articles.

Who's Who in America: a biographical dictionary of notable living men and women of the U. S., ed. by A. N. Marquis. Revised and reissued biennially. Chic. Marquis. 1889 to date. \$7.50.

Condensed sketches of the lives of prominent Americans now living.

Who's Who; an annual biographical dictionary. N. Y. Macmillan. 1849 to date. 45s.

"The pioneer work of the 'who's who' type and still the most important work of the kind. Principally English, but not limited to Englishmen, as a few prominent names of other nationalities are included. Biographies are reliable and fairly detailed; give main facts, addresses, and, in case of authors, list of works." *Kroeger and Mudge.*

Congressional Directory. (See page 87.)

History.—

Brewer, E. C. Historic Note Book, with an appendix on Battles. Phil. Lippincott, 1891. \$3 50.

A popular handbook explaining briefly allusions to historical events, treaties, customs, etc.

Haydn, J. T., comp. Dictionary of Dates and Universal Information Relating to All Ages and Nations, ed. by Benjamin Vinsant. Ed. 25. N. Y. Putnam. 1911. \$6 50 net.

"A standard and useful work. Arrangement alphabetical under the name of event, place, etc. Especial attention is given to the British empire."

Harper's Encyclopedia of United States History, from 458 A. D. to 1912, based on the plan of B. J. Lossing. Rev. ed. 10 v. N. Y. Harper. 1912. \$24.

"The most extensive cyclopedia of the subject, including many biographical articles and containing texts of the constitutions, famous speeches, essays, orations, resolutions, proclamations, facsimiles of important documents, etc. Articles are by well known historians and writers." *Kroeger.*

Heilprin, Louis. Historical Reference Book; comprising a chronological table of universal history; a chrono-

logical dictionary of universal history, a biographical dictionary with geographical notes. Rev to 1899, Ed. 6, with a supplement. N. Y. Appleton. 1902 (The concise knowledge library) \$3.

Accurate and comprehensive.

Hodge, F. W. Handbook of American Indians North of Mexico. (U. S. Ethnology Bureau. Bulletin 30.) 2 v. Wash. Superintendent of documents 1907-10. \$3.

"Contains a descriptive list of the stocks, confederacies, tribes, tribal divisions, and settlements north of Mexico, accompanied with the various names by which these have been known, together with biographies of Indians of note, sketches of their history, archæology, manners, arts, customs and institutions, and the aboriginal words incorporated into the English language" *Letter of transmittal*.

Larned, J. N., ed. New Larned History for Ready Reference, Reading and Research; the actual words of the world's best historians, biographers and specialists; a complete system of history for all uses, extending to all countries and subjects and representing the better and newer literature of history; completely revised and enlarged and brought up to date under the supervision of the publishers by Donald E. Smith and others. 12 v. Springfield, Mass. Nichols. 1922-24. \$99.75.

"Covers all periods and countries. Alphabetically arranged by topic, giving under each subject an extract from the work of a recognized historical authority. Useful cross-references." *Standard Catalog for High School Libraries*.

Low, S. J., and Pulling, F. S., eds. Dictionary of English History. New ed. rev. N. Y. Cassell. 1910. \$3.50.

"A compact, well edited dictionary, with concise articles and some bibliographical references, on subjects, events and personages in English history. First edition 1884, new ed. rev. 1897. The 1910 edition is altered somewhat to include recent events to the accession of George V, but is not rewritten." *Kroeger and Mudge*.

Ploetz, K. J. *Manual of Universal History*; tr. and enl. by W. H. Tillinghast; revised under the editorship of H. E. Barnes. Bost. Houghton. 1925. \$5.

First published in 1883 with the title Ploetz's *Epitome*. "Concise accurate outlines, not tables. The most useful of the outline handbooks." *Mudge*.

Putnam, G. P. comp. *Putnam's Handbook of Universal History*; a series of chronological tables presenting, in parallel columns, a record of the more noteworthy events in the history of the world from the earliest times down to the present day; continued to date under the editorial supervision of George Haven Putnam; reissue continued to Jan. 1919, with historical chart, map and genealogical tables. N. Y. Putnam. 1919. \$3.

The following while not reference books in the sense of those cited above will be of great use and value in a reference collection

Channing, Edward. *History of the United States* v. 1-6. N. Y. Macmillan. (To be published in 8 v.)

McMaster, J. B. *History of the People of the United States*. 8 v. N. Y. Appleton.

Chronicles of America series. 50 v. New Haven. Yale University Press.

Classical Antiquities.—

Harper's Dictionary of Classical Literature and Antiquities. N. Y. American Book Company. 1897. \$6.

"A popular work, most useful for purposes of ready

reference because it gives articles on topics in classical antiquities, biography, mythology, geography, art, history, etc., in one alphabet. Concise articles, brief bibliographies, good illustrations." *Kroeger and Mudge*.

The best all round classical reference book for a school library.

Smith, Sir William. Dictionary of Greek and Roman Antiquities, including the laws, institutions, domestic usages, painting, sculpture, music, the drama, etc., ed. by Sir William Smith, William Wayte, and G. E. Marindin. Ed. 3. Rev. and enl. 2 v. Lond. Murray. 1890-91. 63 s.

"Accepted by all scholars as a work of authority on the subjects with which it deals" *E. C. Marchant in Dictionary of National Biography*

There are several concise dictionaries based on this work. Among them may be mentioned the Concise dictionary of Greek and Roman antiquities, ed. by F. W. Cornish. Lond. Murray. \$4; and the Smaller classical dictionary, rev and ed by E. H. Blakeney. (Everyman's library.) N. Y. Dutton. 80 cents.

Geography.—

Century Cyclopedia of Names. (v. 11 of the Century Dictionary) See page 43. Full in geography.

Lippincott's Complete Pronouncing Gazetteer or Geographical Dictionary of the World. Ed. 3. Phil. Lippincott. 1922. \$12.

Published in 1905 with the title, Lippincott's New gazetteer. The 1922 edition is the same with the addition of 1920 census figures.

"The most comprehensive American work of its kind, alphabetically arranged, giving description and informa-

tion of places, with pronunciation and various spellings of names." *Kroeger*.

The following economic geographies are useful in school reference work:

Brigham, A. P. Commercial geography. Bost Ginn 1923.
\$1 72.

Chisholm, G. G. Handbook of commercial geography. N. Y.
Longmans. 1922 \$7 50

Huntington, Ellsworth and Williams, F. E. Business geography.
N. Y. Wiley. 1922 \$2 75

Jones, W. D., and Whittlesey, D. S. Introduction to economic
geography. v. 1. Chic Univ of Chic Press. 1925 \$5

Smith, J. R. Commerce and industry New ed N. Y. Holt.
1925 \$1 96.

Smith, J. R. Industrial and commercial geography. N. Y.
Holt 1913 \$4 50

Smith, J. R. World's food resources. N. Y. Holt. 1919.
\$3 50

Atlases—

Bartholomew, J. G. Oxford Economic Atlas. Ed. 6,
rev. by J. Bartholomew. Oxford. Clarendon Press.
1925. \$2.

New edition of School Economic Atlas.

"Has 64 maps, covering a wide range of topics connected with physical geography and with commerce." *Standard Catalog for High School Libraries*.

Century Atlas of the World. Rev. and enl. (v. 12 of the Century Dictionary). N. Y. Century Co. 1914

"Originally published in 1897 and revised several times, especially in 1899, 1901 and 1911. New maps in the 1911 edition are: Alaska; Canada (3 maps); Oklahoma; South Polar regions, with exploration routes, and two maps showing development of interurban electric lines in the U. S. Other maps have been corrected, new place names added, and the index entirely reset and supplied

with the 1910 census figures. Except when a large-scale map is needed the Century atlas is generally more satisfactory than the Rand, McNally atlas. General index contains 185,000 names." *Kroeger and Mudge*.

Goode, J. P. School Atlas, Physical, Political and Economic. Chic. Rand, McNally & Co. 1923. \$4.

Rand, McNally & Co. Library Atlas of the World. 2 v. Chic. Rand, McNally & Co. 1912. \$25.

v. 1. United States.

v. 2. Foreign countries.

Special relief maps are included as well as geographical and political. Each map in the volume for the U. S. has a separate index. There is one general index in the volume for foreign countries. The indexes give population, and railroads, steamship lines, money order post offices, telegraph stations, etc., are indicated.

Rand, McNally & Co. Commercial Atlas of America, containing large-scale maps of all states in the U. S. and its outlying possessions . . . the Dominion of Canada, Newfoundland, Mexico, Central America, Panama, Bermuda, the West Indies, Cuba . . . large continental maps of North America, South America, Europe, Africa, Asia, and Oceania; and a new map of South America in four sections. Chic. Rand, McNally & Co., 1926. \$35.

Published annually.

Times, London. Times Survey Atlas of the World; a comprehensive series of new and authentic maps reduced from the national surveys of the world and the special surveys of travellers and explorers, with general index of over 200,000 names. Prepared at the "Edinburgh Geographical Institute" under the direction of J. G. Bartholomew. London. The Times. 1920. \$9 75.

"A very fine atlas that has always before sold at a much higher price. W. L. G. Joerg, of the American Geographical Society, an expert on atlases and maps, wrote in the *Geographical Review* in 1923, 'The general library that can afford but one atlas . . . can do no better than to buy this atlas. There is no American atlas to compare with it.'" *Standard Catalog for High School Libraries*.

The workmanship of German and English atlases is superior to that of American atlases.

United States Geological Survey. Topographic Maps.

Maps of nearly every section of the United States may be had for 10 cents each from the Director of the Geological Survey, Washington, D. C. Stamps not accepted.

Historical Atlases.—

Bartholomew, J. G. *Literary and Historical Atlas of Europe* (Everyman's library). N. Y. Dutton. 1910. o. p.

"Contains 56 admirably engraved and colored historical maps, 46 line maps showing battle plans and regions of literary fame and a 40 page gazetteer of places of literary and historical interest." *N. Y. S. L. Best books*. 1910.

Bartholomew, J. G. *Literary and Historical Atlas of America* (Everyman's library). N. Y. Dutton. 1911. o. p.

"Physical, historical and modern maps of North and South America, a few battle plans, a chapter on coinage, gazetteer of places having a literary or historic interest, and index of towns." *N. Y. S. L. Best books*. 1911.

Though intended primarily for the private library these inexpensive little atlases will be of use in the school library especially if unable to afford the larger atlases. Maps

of the Scott country, Pepys' London, King Arthur's country, etc., are helpful in the literature classes.²

Dow, E. W. *Atlas of European History*. N. Y. Holt. 1907. \$1.50 net. Indexed. A good, popular atlas.

Putzger, F. W. *Historical School Atlas of Ancient, Medieval, and Modern History, with English text*. N. Y. Lemcke 1903. \$1.25.

Shepherd, W. R. *Historical Atlas*. Ed. 4, rev. N. Y. Holt. 1924. \$3 90.

"Scholarly, comprehensive and clear. Covers the period from 1450 B. C. to the present, the revised edition showing the changes caused by the World War. Full contents and index of names." *Standard Catalog for High School Libraries*.

Literature.—

Allibone, S. A. *Critical Dictionary of English Literature and British and American authors, living and deceased, from the earliest accounts to the latter half of the nineteenth century*. 5 v. Phil. Lippincott. 1870-91. \$25.

v. 1-2, A-Z. v. 4-5, Supplement by J. F. Kirk

"A standard work very useful in spite of the fact that it is not entirely accurate and so must often be checked, for important points, by reference to some other authority . . . Arranged alphabetically by authors, giving for each, brief biographical sketch, full list of works with dates, and reference to critical comments or reviews." *Mudge*.

Chambers' *Cyclopedia of English Literature*. New ed. by David Patrick. 3 v. Phil. Lippincott. 1902-04. \$12.

² There is a similar volume for Asia and one for Africa and Australasia.

"Critical and biographic account of English and American authors and characteristic selections from their works. Thoroughly revised by well-known writers and brought to date." *Kroeger*.

Champlin, J. D. *Young Folks' Cyclopedia of Literature and Art*. N. Y. Holt. 1901. \$3.

"A. L. A." Index; an Index to General Literature, ed. by W. I. Fletcher. N. Y. Anderson. 1911. \$6. (Reprint from Ed. 2 1901.) ———. Supplement, 1900-1910. Chic. A. L. A. Pub. Board. 1914. \$4

"A subject index which attempts to do for books of essays and general literature what Poole's index does for periodicals" *Kroeger and Mudge*.

Moulton, C. W. *Library of Literary Criticism of English and American Authors*. 8 v. N. Y. Malkan. 1901-09. \$40.

A brief biographical sketch is followed by contemporary and later criticism. The arrangement of the book is chronological.

Stedman, E. C., and Hutchinson, E. M., comps. *Library of American Literature*. 11 v. N. Y. Webster. 1891. \$33.

"The design is to afford the reader a general view of the course of American literature from the outset. . . . It is made for popular use and enjoyment." *Preface*.

"Select and characteristic examples from American literature are given without any critical notes, and the work is not confined to masterpieces. Arrangement is chronological with a general index in the last volume, which is useful in finding selections on special subjects. In the index, poems are indexed by the title under Poetry. Short biographies of the authors are given in volume 11, which

also contains a list of noted sayings of Americans. Portraits." *Kroeger*.³

Warner Library . . . editors: John W. Cunliffe, Ashley H Thorndike. 30 v. N. Y. Warner Library Co. 1917. \$87.

Earlier editions were published under the title Library of the World's Best Literature, ed. by C. D. Warner.

"A very useful collection, representing the literature of all countries. Arranged by authors, with supplementary volumes giving synopses and courses of reading. Under each author includes biography, criticisms and selections." *Standard Catalog for High School Libraries*.

Poetry.—

Granger, Edith, ed. Index to Poetry and Recitations. Rev. and enl. ed. Chic McClurg. 1918. \$10.

"Very useful reference book. Indexes 369 collections; gives selections for holidays." *Standard Catalog for High School Libraries*.

Bryant, W. C., ed. New Library of Poetry and Song, with his review of poets and poetry from the time of Chaucer. Rev. ed. N. Y. Baker & Taylor. 1903 \$5

"Popular poems and poetic extracts. Classified as poems of infancy and youth, friendship, love, home, religion, nature, peace and war, the sea, adventure, humor, etc. Indexes of titles, first lines and poetical quotations." *N. Y. S. L. Best books*.

Palgrave, F. T, ed. Golden Treasury; selected from the best songs and lyrical poems in the English language. Rev. and enl. (Golden Treasury Series.) N. Y. Macmillan. 1903. \$1.

³ Tyler's History of American literature during the colonial time 2 v Putnam Tyler's Literary history of the American revolution 2 v Putnam Richardson's American literature, 1607-1885 Putnam Garnet and Gosse's English literature. 4 v. Macmillan. And Ryland's Chronological

Quiller-Couch, Sir A. T., ed. Oxford Book of English Verse, 1250-1900. Oxford. Clarendon Pr. 1901. \$2 50.

Stedman, E. C., ed. American Anthology, 1787-1899, selections illustrating the author's critical review of American poetry in the 19th century. Bost. Houghton. 1900. \$3.

"Grouped chronologically. Attempts to represent best work, not to select the imperishable. Followed by compact biographical notices alphabetically arranged, of poets represented." *N. Y. S. L. Best books*.⁴

Stevenson, B. E., comp. Home book of Modern Verse; an Extension of the Home Book of Verse, being a selection from American and English Poetry of the Twentieth Century. N. Y. Holt. 1925. \$7.50.

Poems are arranged in large groups by subject; indexes of authors, titles and first lines.

Stevenson, B. E., comp. Home Book of Verse, American and English, 1580-1920; with an appendix containing a few well-known poems in other languages. Ed. 5, rev. N. Y. Holt. 1922. \$15. 2 v. \$18 50.

"Arranged by large subjects, with full indexes of authors, titles and first lines. A very useful collection: contains many of the modern poems usually omitted from most anthologies." *Kroegeer and Mudge*.

Ward, T. H., comp. The English Poets (Students' Edition). 5 v. N. Y. Macmillan. 1894-1918. \$2 each.

Covers English poetry from Chaucer to Rupert Brooke;

outlines of English literature, Macmillan, are useful additions to the reference collection

⁴ Stedman's critical essays: Poets of America Houghton, and Victorian poets Houghton, and his Victorian anthology, Houghton, are useful.

gives selections, critical prefaces to each author by authorities on English literature and a general introduction by Matthew Arnold.⁵

Quotations.—

Bartlett, John. *Familiar Quotations*. Ed. 10. Bost. Little. 1914. \$4.50.

"A standard collection, comprehensive, well selected. Arranged by authors chronologically, with exact references; very full index. One of the best books of quotations." *Kroeger and Mudge*.

Bohn, H. G. *Handbook of Proverbs*. Lond. Bell. 1889. \$1.50.

Chiefly English proverbs with some in foreign languages and a complete alphabetical index.

Benham, W. G., comp. *Book of Quotations, Proverbs and Household Words*. Phil. Lippincott. 1907. \$3.

"Valuable supplement to Bartlett's *Familiar Quotations*, containing over 32,000 quotations selected from 1300 authors including many minor ones not represented in Bartlett. Literatures covered are English and American, Greek and Latin, modern European (in original translation). Full word index." *A. L. A. Catalog supplement*.

Hoyt, J. K. *New Cyclopedia of Practical Quotations*; revised and greatly enlarged by K. L. Roberts. N. Y. Funk. 1922. \$7.50.

"This new edition has been completely revised, the simple plan of one topical alphabetical arrangement has

⁵ The following collections are useful in the school library: Stevenson, B. E., comp. *Home Book of Verse for Young Folks* Holt; Stevenson, B. E., comp. *Poems of American History*. Houghton, Stevenson, B. E. and E. B., comps. *Days and Deeds*. Doubleday; Untermeyer, Louis, ed. *This Singing World*, Harcourt; Wiggan, Mrs. K. D. and Smith, N. A., comps. *Golden Numbers*. Doubleday.

been followed and 4500 new quotations included. Has a full topical index, a list of authors quoted, with brief biographical notes and a concordance to quotations." *Booklist*.

Walsh, W. S., comp. *International Encyclopedia of Prose and Poetical Quotations*. Philadelphia. Winston. 1908. \$3.

Literary Handbooks.—

Brewer, E. C. *Dictionary of Phrase and Fable*. New ed. Phil. Lippincott. 1924. \$6.

"Gives derivation, source or origin of common phrases, allusions and words that have a special meaning. Includes abbreviations, colloquial and proverbial phrases, mythological and biographical references, fictitious characters, etc." *Mudge*.

Brewer, E. C. *Reader's Handbook of Famous Names in Fiction, Allusions, References, Proverbs, Plots, Stories and Poems Together with an English and American Bibliography and a List of the Authors and Dates of Dramas and Operas*. New ed. rev. and enl. Phil. Lippincott. 1898. \$4.

"One of the best of these handbooks." *Mudge*.

Century Cyclopedia of Names (v. 11 of the *Century Dictionary*). See page 43.

Reddall, H. F., comp. *Fact, Fancy and Fable; a new handbook for ready reference on subjects commonly omitted from cyclopedias*. Chic. McClurg. 1899. \$1.50.

"Gives useful and curious information, such as memorable days, pseudonyms, Americanisms, political nomenclature, foreign words and sentences, contractions, and abbreviations, personal sobriquets and nicknames, familiar

phrases and folk sayings, mythological allusions." *Kroeger*.

Wheeler, W. A., and Wheeler, C. G. *Familiar Allusions; a handbook of miscellaneous information*. Bost. Houghton. Ed 5. 1890 \$3 50.

Fiction.—

Baker, E. A. *Guide to the Best Fiction in English* New ed., enl. and rev. N. Y. Macmillan. 1913. \$9

"Titles are grouped by period with descriptive notes, publishers and prices. Includes chief translations of foreign novels Fully indexed." *N. Y. S L Best books*

Baker, E. A. *Guide to Historical Fiction*. N Y Macmillan. 1914. \$9

"Practically a new work, although based upon the author's *History in Fiction*, 1907. Lists about 5000 novels which in any way portray the life of the past, including mediaeval romances and novels of manners, as well as avowedly historical novels. Arrangement is first by country and then chronologically by the historical period illustrated and descriptive notes indicate briefly the plot and scene of each story, its historical characters, etc. Full index (148 pp.) of authors, titles, historical names, places, events, allusions, etc. Best and most comprehensive list yet published." *Kroeger and Mudge*.

Nield, Jonathan. *Guide to the Best Historical Novels and Tales*. Ed. 4. Putnam. 1911. \$4 50

Art, General.—

American Art Annual, 1898-1926. N. Y. American federation of arts, 1899-1927 v. 1-23. \$7.50.

"A very useful annual for current directory, institutional and biographical information." *Mudge*.

Champlin, J. D. Young Folk's Cyclopedia of Literature and Art. N. Y. Holt. 1901. \$3.

Reinach, Salomon. Apollo; an illustrated manual of the history of art throughout the ages. New ed. rev. N. Y. Scribner. 1924. \$2.00.

"Remarkably compact, readable history of painting, sculpture, and architecture, containing illuminating criticism. Illustrated with 600 small but distinct half tones." *A. L. A. Catalog supplement.*

Waters, Mrs. C. E. Clement. Handbook of Legendary and Mythological Art. Enl. ed. Bost Houghton. 1890. \$3.

"Contains a catalogue of pictures in European galleries. Good popular handbook." *Kroeger.*

Art, Painting.—

Champlin, J. D., and Perkins, C. G. Cyclopedia of Painters and Painting. 4 v. N. Y. Scribner. 1892. \$20

"Names of painters and their works are given in one alphabet. A sketch of the artist with a list of his works and bibliographical notes is often accompanied by his portrait and an occasional reproduction in outline of important paintings. Under the name of a celebrated painting will be found a brief description of it." *Kroeger.*

Art, Architecture.—

Sturgis, Russell, and others. Dictionary of Architecture and Building, Biographical, Historical, and Descriptive. 3 v. N. Y. Macmillan. 1901. \$18.

"Combines the features of a dictionary and an encyclopedia." *Kroeger*.⁶

Music.—

Grove, Sir George. Dictionary of Music and Musicians Ed. by H. C. Colles. 3rd. ed. 6 v. N. Y. Macmillan. 1927. \$7.50 each.

The standard encyclopedia in English, covering the whole field from 1450 to date, but with special emphasis on English subjects. Includes articles by specialists on musical history, theory and practice, instruments, terms, etc., biographies of musicians and articles on individual compositions. Bibliographies are included Does not give plots of operas. Volume 6 is the American supplement, including names from the U. S., Canada and some from South America.

Industrial Arts.—

Bailey, L. H., ed Cyclopedia of American Agriculture. 4 v. N. Y. Macmillan. 1907-09. \$36.

"Grouped by subjects so as to form a comprehensive treatise, the composite work of several hundred specialists. . . . Numerous text illustrations and plates. Full index to each volume." *N. Y. S. L. Best books*.

Bailey, L. H., ed. The Standard Cyclopedia of Horticulture; a discussion, for the amateur, and the professional and commercial grower, of the kinds, characteristics and methods of cultivation of the species of plants

⁶ The following are useful for reference work: Caffin's Guide to pictures. Baker and Taylor. Hamlin's Textbook of the history of architecture. Longmans Muther's History of painting from the 4th to the early 19th century. Putnam. Muther's History of modern painting. 4 v. Dutton. Tarbell's History of Greek art. Macmillan A library should have if possible. Lubke's Outlines of the history of art. 2 v Dodd. Ferguson's History of architecture in all countries. 2 v. Dodd.

grown in the regions of the United States and Canada, for ornament, for fancy, for fruit and for vegetables; with keys to the natural families and genera, descriptions of the horticultural capabilities of the states and provinces and dependent islands, and sketches of eminent horticulturists. 6 v. N. Y. Macmillan. 1914-17. \$48.

Hiscox, G. D. Henley's Twentieth Century Book of Recipes, Formulas and Processes; Containing 10,000 Selected Household and Workshop Formulas, Recipes, Processes and Money Saving Methods for the Practical Use of Manufacturers, Mechanics, Housekeepers and Home Workers. New ed. rev. and enl. N. Y. Henley. 1925. \$4.

Reprint of 1921 edition, with additional chapter on workshop and laboratory methods.

Hopkins, A. A., ed. Scientific American Cyclopedia of Formulas. N. Y. Munn. 1911. \$5 50.

"While this revision includes about thirty per cent. of the material in the 28th ed. of the Scientific American Cyclopedia of Receipts, Notes and Queries, it is practically a new book. Much new matter has been added. . . . The formulas are classified and grouped in chapters. An extensive section has been added on chemical and technical processes. Detailed index." *A. L. A. Book-list*.

Ward, Artemas. Encyclopedia of Food; the Stories of the Foods by Which We Live, How and Where They Grow and are Marketed, Their Comparative Values, and How Best to Use Them and Enjoy Them. N. Y. Artemas Ward. 1923. \$10.

"It is a new edition of the Grocer's Encyclopedia, published 1911. It differs from that earlier work in the omission of articles on alcoholic beverages and on the various commodities other than foods usually carried by grocers. Some of the articles on food have been revised and enlarged." *Mudge*.

Science.—

Nature Library. N. Y. Doubleday. 1905-12. 17 v. \$5 each.

Contents: American animals by Witmer Stone and W. E. Cram; American food and game fishes by D. S. Jordan and B. W. Evermann; Bird neighbors by Neltje Blanchan, Birds that hunt and are hunted by Neltje Blanchan; Bird homes by A. R. Dugmore; Book of grasses by M. E. Francis, The butterfly book by W. J. Holland, The frog book by M. C. Dickerson, The insect book by L. O. Howard; Mosses and lichens by N. L. Marshall; The moth book by W. J. Holland; The mushroom book by N. L. Marshall, Nature's garden by Neltje Blanchan; The reptile book by R. L. Ditmars; The shell book by J. E. Rogers; The spider book by J. H. Comstock; the tree book by J. E. Rogers

"Useful for a reference department because there is no English encyclopedia of the subject" *Mudge*.

Sold separately.

Glazebrook, Sir Richard. Dictionary of Applied Physics. 5 v. Lond. Macm. 1922-23. 63s. per vol.

v. 1, Mechanics, engineering, heat; v. 2, Electricity; v. 3, Meteorology, metrology and measuring apparatus; v. 4, Optics, sound and radiology; v. 5, Metallurgy and aeronautics.

Thorpe, Sir Edward. Dictionary of Applied Chemistry. Rev. and enl. ed. 5 v. N. Y. Longmans. 1922-23. \$20. per vol.

"The standard dictionary in English, with long articles, some of which are signed, good illustrations and bibliographies. Indispensable in the college or large reference library." *Mudge*.

Synonyms.—

Crabb, George. Crabb's English Synonyms. Rev. and enl. by the addition of modern terms and definitions arranged alphabetically, with complete cross-references throughout, with an introduction by John H. Finley. N. Y. Harper. 1917. \$2 50.

"Gives quotations from the best writers illustrating the use of words." *Standard Catalog for High School Libraries*.

Fernald, J. C. English Synonyms and Antonyms; with notes on the correct use of prepositions. New ed. enl. N. Y. Funk. 1914. \$1.90 (Standard educational series).

Roget, P. M. Thesaurus of English Words and Phrases, classified and arranged so as to facilitate the expression of ideas and assist in literary compositions; ed by J. L. Roget. New ed. N. Y. Longmans. 1913. \$2 50.

"A collection of words of the English language and of the idiomatic combinations peculiar to it, arranged not in alphabetical order . . . but according to the ideas they express. . . . Object: the idea being given to find the word or words by which that idea may be most fitly and aptly expressed." *Preface*.

Economics and Government.—

Bliss, W. D. P., and Binder, R. M., eds. New Encyclopedia of Social Reform. New ed. N. Y. Funk. 1908. \$7.50.

"Comprehensive, accurate and impartial reference work, including besides social-reform movements and activities, economic, industrial and sociological facts and statistics of all countries and all social subjects. Brief bibliographies on important subjects." *A. L. A. Catalog supplement*.

McLaughlin, A. C., and Hart, A. B., eds. Cyclopædia of American Government. 3 v. illus. N. Y. Appleton. 1914. \$24.

"Scope is wider than title indicates as many articles are included on general or foreign topics, but the majority of the subjects treated are American. Covers topics in theory or philosophy of political society, forms of political organization, methods and agencies of law and government, international and constitutional law, party organization, federal, state and municipal government, history of political parties and other American political topics. Many biographies, including those of living men. Arrangement is alphabetical by small subjects and there is an analytical index." *Kroeger and Mudge*.

Palgrave, Sir R. H. T., ed. Dictionary of Political Economy. Rev. ed. 3 v. N. Y. Macmillan. 1910. \$26.25.

"Brief articles on philosophy, history, and present con-

ditions; biographic sketches, definitions of terms, bibliographic notes, etc., full on the side of English political economy, but including the U. S. and the English colonies. Concise, signed articles." *A. L. A. Catalog and Kroeger*.

Education.—

Monroe, Paul, ed. *Cyclopedia of Education*. 5 v. N. Y. Macmillan. 1911-13. \$25.

"The best encyclopedia of education in English, with signed articles, good bibliographies and excellent illustrations. The scope of the work is general, including education in all countries and all periods, but American subjects receive somewhat fuller treatment than foreign topics. Analytical index in vol. 5 groups articles by larger subjects than those used in main alphabet." *Kroeger and Mudgc*.

Customs.—

Chambers, Robert. *Book of Days*; a miscellany of popular antiquities in connection with the calendar. 2 v Phil. Lippincott. 1891. \$10.

"Published originally in 1862-64. Under each day of the year is given anecdote, biography, history, curiosities of literature and miscellaneous information. A general index in volume 2 must be used. Useful in looking up information about Hallowe'en, Christmas, etc." *Kroeger*.

Walsh, W. S. *Curiosities of Popular Customs and of Rites, Ceremonies, Observances and Miscellaneous Antiquities*. Phil. Lippincott. 1898. \$5.

Religion.—

Hastings, James, ed. *Dictionary of the Bible*. N. Y. Scribner. 1909. \$7.

"The aim has been to provide a complete and independent dictionary of the Bible in a single volume and abreast of present day scholarship." *Preface*.

Philosophy.—

Baldwin, J. M. Dictionary of Philosophy and Psychology. New ed. 3 v. in 4. N. Y. Macmillan. 1911. \$36.

"A useful authoritative work, concise rather than exhaustive in treatment, with signed articles by specialists and many bibliographies. Covers the whole field but is fuller for modern than for earlier aspects of the subjects and does not attempt to cover the whole of Greek and Scholastic philosophy. Includes very brief biographies of men no longer living. A special feature is the inclusion of French, German, and Italian equivalents of English terms." *Kroeger and Mudge.*

Aids in Debating.—

Foster, W. T. Essentials of Exposition and Argument. Bost. Houghton. 1911. 90 cents

"An adaptation of the author's Argumentation and Debating for high schools and debating clubs. Contains specimen briefs, arguments and material for briefing, summary of parliamentary rules for debaters and 50 propositions." *A. L. A. Catalog supplement.*

Phelps, E. M. Debaters' Manual. Ed. 5, rev. N. Y. H. W. Wilson. 1924. (Debaters' handbook series.) \$1.50.

A selected bibliography, an index to debate material, and a list of debating organizations are included in the appendices.

Robbins, E. C. High School Debate Book. New ed. Chic. McClurg. 1923. \$1.50.

"Practical handbook, containing 18 briefs on live subjects, with references. Preliminary chapters treat of the

78 THE USE OF BOOKS AND LIBRARIES

value of debate, briefing the question, and preparing the speech." *A. L. A. Catalog supplement*.

Debaters' Handbook Series. N. Y. H. W. Wilson. \$1.25 a vol.

"Useful both for debate and general reference. Each volume contains a brief, arguments on both sides of the question chosen from a wide range of sources, and a selected bibliography. In Sept. 1927, 7 volumes were in print." *Standard Catalog for High School Libraries*.

This series is being replaced by the Handbook series which is similar in form but wider in scope. Current topics of interest are covered regardless of suitability for debate. N. Y. H. W. Wilson Co. 1915-date. Prices vary with volume.

University Debaters' Annual; Constructive and Rebuttal Speeches Delivered in Debates of American Colleges and Universities during the College Year 1914-15 to 1924-25. N. Y. Wilson. 1915-25. \$2.25 a vol.

"Each volume gives reports of leading intercollegiate debates of the year, each accompanied by a brief and a bibliography." *Standard Catalog for High School Libraries*.

Carnegie Library of Pittsburgh. Debate Index. 30 cents.

Indexes the best known debaters' manuals. Supplements issued frequently.

EXERCISES.

1. Where and what is Lorraine? In what range of mountains is Mt. Hood? Give its height, latitude, and longitude. What is the length of the Rappahannock? The principal industry of Hoochow-fu?

2. What was the Bishops' war? Who was called the "hatted king"? Who were the peripatetics? What is the meaning of the term "benefit of clergy"?

3. Who was Redjacket? Empedocles? Henry of Portugal?

4. Find an account of scholasticism. Give three references for further reading on this topic. Where can you find a history of higher education for women? When was the Herbart Society founded and what is its full name? Find information on the present public school system of Indiana; on methods of teaching grammar; on the Carnegie Foundation; on compulsory attendance in schools.

5. What artist painted the picture called the "Age of Innocence"? In what art gallery is Correggio's "Marriage of St. Catherine of Alexandria"? Find a description of the "Madonna of the Rocks" by Leonardo da Vinci; of the three orders of Greek architecture. What ancient statue was called the "Canon"? Why?

6. Who is the representative from the 8th Kentucky district? How many times has he been elected to Congress? Who is the director of the mint? What are the duties of the Secretary of the Navy? Who is the chairman of the U. S. Geographic Board?

7. Mention a novel dealing with Queen Elizabeth's time; one with the War of 1812. What index did you consult?

8. In what books are the following characters found? Dick Swiveler, Richie Moniplies, the Rev. Mr. Collins, Mrs. Proudie?

9. Where was Eva March Tappan born? Name three of her works. Who is Abbot Lawrence Rotch?

10. Find an illustrated account of Indian bows and

arrows; a biography of Sitting Bull. What Indians are called the Neutrals?

11. Find a plan and a full description of an Homeric house. Who or what was Æsculapius? Circe? Maronea? Camillus? The Alexandrian school? Find a description of the Roman legion in the first century B. C.; of shipbuilding in ancient times. Had the Romans any system of shorthand?

12. What index would you consult to find an essay on Idealism in literature?

13. Find maps showing Greece at the time of the Peloponnesian War; the territorial expansion of the Roman empire; the three partitions of Poland, the battle of Waterloo; the campaigns of the American Revolution.

14. Find some of the Candlemas day weather superstitions. What is meant by "Boxing Day"? What was the origin of the Beltein or Beltain Festival? Where can you find a good description of Hallowe'en customs?

15. Where is Pressburg? What is the foreign form of the name? Where are the Ozark Mountains? Find a description of the town of Oxford, England. What is the population of Raleigh, N. C.?

16. Find a contemporary criticism of Milton's "Paradise Lost"; a description of the personal appearance of Samuel Johnson; a list of John Locke's writings.

17. Find a brief, authoritative biography of Edmund Burke. Who was William Havard? Charles Towneley?

18. Find an account of the English "counties." What is the origin of the name? Who were the Lollards? Find an account of the House of Lords; of William de Longchamp. What are the Chiltern Hundreds?

19. Find the approximate latitude and longitude of the Bay of Biscay; the Samoan Islands; Nashville, Tenn.;

Three Rivers, Canada; Mont Pelée. Find a map indicating the voyages of Columbus.

20. When did Malebranche live? Who was Genghis Khan? Who was called Leopold the Great? Mention three books written about him.

21. In what story is the Princess Fairstar? What tree is called in folk-lore the Quicken-tree? Who was called the Great Unknown? What was the Mississippi Bubble? Find the legend of the Flying Dutchman; the plot of Dr. Jekyll and Mr. Hyde.

22. Find a critical and biographical account of Edgar Allan Poe, of Robert Louis Stevenson; a critical estimate of Chapman's translation of the Iliad; of Lewis Carroll's writings; of Charles Egbert Craddock's stories. Where can you find selections from the works of Cotton Mather?

23. Find a concise account of the conspiracy of Catiline; a genealogical table of the Norman kings in England; a brief account of the War of Grecian Independence, 1821-29.

24. Find a brief article on Shakespeare suitable for children.

25. Who wrote:

"Absence of occupation is not rest,
A mind quite vacant is a mind distressed."

From what poem is it taken? Find two quotations about books, give author and title of the work from which they are taken. Give the author and correct form of the following: "Hit the nail on the head"; "Safe bind safe find."

26. In what county is Dedham, Mass., situated, on

what railroad; has the American Express Company an office there; what is the population?

27. Find an outline of the history of printing. How many monasteries and religious houses were suppressed in England during the years 1525-40?

28. Find a full account of "counter-point." Who composed the opera, *Fidelio*, and when was it first produced? Find an account of the sonata as a musical form.

29. What does the phrase "deacon off" mean, and what is its origin? Who used the pseudonym Mr. Sparrowgrass? Explain: *Tom Tiddler's Ground*; *G. O. M.*

30. Find a history of the protective tariff in the United States. What is the single tax, and what are some of the objections to it? Find an account of the English poor-laws; the Elmira Reformatory; juvenile courts in the United States; a definition of profit-sharing.

31. Find a full account of the siege of Lucknow; of the Spanish-American War. What can you find about the great wall of China?

32. To whom was given the name "Old Man of the Mountain"? Explain the following allusions: Corporal Violet; Sage of Concord; *Shakuntala*; Prince Prettyman

33. What treaty of importance was signed during the "Rump Parliament"?

34. Who wrote the poem beginning "The sun has kissed the violet sea"? Give its title and the collection where it can be found.

35. Who is Ernest Rhys? Kropotkin?

36. Where can you find the text of the Articles of Confederation; Calhoun's speech on the Right of Secession; a history of the Monroe Doctrine?

37. Find an explanation of the following: To pour oil on the troubled waters; the horns of a dilemma.

38. Find arguments for and against individualism as a theory of government; the statement made in the platform of the Democratic party in 1884 about tariff revision; an account of home rule for cities in the United States.

Chapter VI

GOVERNMENT PUBLICATIONS

Government publications, usually spoken of as public documents, do not differ from other reference books in their use and the reason for devoting a separate chapter to them is, that the method of selecting and obtaining them presents a somewhat different problem from that of selecting and buying other books.

A public document is one that is printed at the expense and by the authority of any branch of a city, state or national government. Many such publications are of great value to school libraries and many more are of small value; for this reason great care should be exercised in selection. Most documents can be obtained free for a school library.

Municipal Documents.—The public library of a city should obtain all of the reports its city publishes; the high-school library will find publications of certain branches of the municipal government very useful. Reports and bulletins of the Board of Education, Board of Health, Public Library, Department of Charities and Correction, Parks and Playgrounds, Public Service and Finance, should supplement the textbook on Civics. These departments of the city government will send their reports to the school library if requested to do so. In small towns where no regular reports are published, but only statements printed in the local papers, the librarian should preserve the clippings and file them. All of this material

is necessary for reference and debate work, and, to be made useful, must be classified and catalogued.

State Documents.—Publications of certain branches of your State government should also be secured for the school library. Local conditions will determine what the librarian can obtain, but in most States a request sent to the head of the department will bring the desired documents. Publications of the following departments should be received regularly and kept on file: Department of Agriculture; Department of Education; Geological Survey; Library Commission; State Library and State University and Agricultural and Mechanical College. The legislative manual or "red book" is very useful and should be in the library.

Federal Documents.—The United States government publishes a vast amount of valuable material, much of which is far too technical for the school library. Many libraries boast of being a depository for government documents, when they have not even the room to shelve the volumes and never dream that their part of the bargain is to make all those volumes available for use. Properly to care for all government publications would be too great an expense for a school library; besides, the expense would be unwarranted by the use made of many of the volumes.

Selection.—It is impossible to suggest a list of documents suitable to all school libraries. A recommended list is given in this chapter, but the following additional helps should be consulted in making a selection:

Aids.—

American Library Association Catalog. 1926.
The booklist (monthly). A. L. A.

- Books for the high school library, prepared by a joint committee of the N. E. A. and the A. L. A. Chicago A. L. A. 1924.
- Brown, Zaidee, comp. Standard catalog for high school libraries. Pt. 1, N. Y. Wilson 1926.
- Noyes, F. K. Teaching material in government publications Washington. Gov't. print. off. 1913. (U. S. Bureau of education. Bulletin 1913, no 47)
- Reece, E. J. State documents for libraries. 1915.
- U. S. Bureau of education. Bulletins. Washington, Gov't. printing office, 1906-date.
- U. S. Bureau of education. Library. List of references on the use of pictures in education. Washington, Gov't. printing office. 1921. (Library leaflet, no 13.)
- U. S. Children's bureau. Bureau publications. Washington, Gov't. printing office. 1920-.
- U. S. Superintendent of documents Price lists of government publications. Washington, Gov't. printing office. gratis.
- Windes, E. E. Government publications useful to teachers. Washington, Gov't. printing office. 1924. (U. S. Bureau of education. Bulletin 1924, no. 23.)
- Wright, E. A. List of bulletins of the Bureau of education, 1906-1922, with index by author, title, subject. Washington, Gov't. printing office. 1923. (U. S. Bureau of education. Bulletin 1923, no. 35.)
- Wyer, J. I. U. S. government documents in small libraries. Chicago, A. L. A. 1914. (Handbook no 7.)

When a selection of documents has been made, the librarian may get them free of cost either from (1) the offices at Washington that issue them, or (2) by a request sent to the Congressman of the district. In case these two sources fail, the document may be bought at a nominal cost from the Superintendent of Documents Office at Washington.

SUGGESTED LIST OF U. S. DOCUMENTS FOR HIGH SCHOOL LIBRARIES

Reference Books.—

- U. S. Bureau of education. Educational directory. Washington, Gov't. printing office. 1912—date (annual).

Maps.—

- U. S. General Land Office. Maps.
- The general land office publishes a large map of the United States, and also maps for each of the states in which there is now public land. They are on a scale of 12 miles to the inch. They are each complete in one sheet, except California which comprises two sheets.
- The state maps show the state capital, county seats, railroads, canals, county boundaries, swamp and prairie lands, bird reservations, Indian reservations, and life saving stations, but they *do not show the vacant public land*. 25 cents each by states.
- U. S. Geological Survey. Topographic sheets.
- The geological survey is making a topographic map of the United States. More than two fifths of the country excluding outlying possessions has been mapped, every state being represented. Connecticut,

Delaware, District of Columbia, Maryland, Massachusetts, New Jersey, Ohio, Rhode Island and West Virginia have been completely mapped. Sheets of regular size are sold by the Geological Survey at 10 cents each.

U. S. Post Office Department. Rural route maps.

Maps of those counties in which the rural delivery postal system is completely established. The maps are published in two forms, one giving simply the rural free delivery routes, starting from a single given post office, sold at 10 cents; the other, the rural free delivery routes in an entire county, sold at 35 cents. Scale: 1 inch to a mile. Sold by the Disbursing Clerk, Post Office Department.

- Taylor, W. P. Suggestions for field studies of mammalian life histories. Washington, Gov't. printing office. 1919. 8 p. 5 cents. (U. S. Dept. of agriculture. Dept. circular 59.)
- U. S. Superintendent of documents. Insects, bees, honey, and insects injurious to man, animals, plants and crops. Washington, Gov't. printing office. gratis. (price list 41.)

Classification and Cataloguing.—Classify these docu-

ments as you would any other book. The author entries given in the list may be used as author entries for the card catalogue. Unless the material is classified and fully catalogued or made available through a subject arrangement in the vertical file, it will be of little use to either the teacher or pupil who is searching for the information contained.

Use.—Those documents that come bound should be prepared for the shelves just as other books are; the serials—Farmers' bulletins and Bureau of Education bulletins—should be treated just as all bound magazines are; whatever comes in pamphlet form should be put in with the rest of the pamphlet collection.

Where a library makes a selection of this kind the complete indexes covering all Federal documents are not of great help, but it is very necessary to know how to use the individual indexes to each document, to know which documents are indexed in the periodical indexes, to catalogue fully enough to bring out every bit of useful material under its specific subject heading in the catalogue and finally to know your documents so thoroughly that you can use them almost by instinct. For fuller information about government publications, see Wyer's *United States Government Documents* (N. Y. State Library Bulletin 102), Clarke's *Guide to the Use of U. S. Government Publications* (F. W. Faxon \$2.50), and Reece's *State Documents for Libraries*. (Univ. of Ill. 1915.)

Chapter VII

MAGAZINE INDEXES

After the card catalogue there is no tool so useful in a library as what is commonly known as Poole's Index. For material on current topics we have practically no place to go to except the magazines, and when you consider the multiplicity of weeklies, monthlies, and quarterlies, you can readily realize how soon we should be hopelessly at sea, were it not for some index to enable us to turn at once to the exact volume and page. With the very thorough indexing that is done to-day, it is almost impossible to imagine what it was like when there were no printed guides, only the more or less fallible memories of librarians to indicate to readers just where the magazine article they needed was to be found.

Poole's Index, History.—Poole's Index, the first and most important series of magazine indexes, was the outcome of necessity and its origin is not without interest.

In 1847, William Frederick Poole, the compiler of Poole's Index, was a student at Yale College. Owing to the fact that he was older than some of his fellow students and because of his love for books, he was given the position of assistant librarian of the college library. He also became librarian of his college society called "Brothers in Unity," which had an especially fine library of some 10,000 volumes. While he was serving in these two capacities, he saw, to use his own words: "That sets of

standard periodicals with which the library was well supplied were not used, although they were rich in treatment of subjects about which inquiries were made every day." Mr. Poole, therefore, undertook a simple index to such material and the students soon flocked to him for help, which they could not get from the library catalogue or from anywhere else. This index was only in manuscript and as it soon began to wear out, "printing," Mr. Poole modestly says in the preface to the first volume of the Index, "seemed to be the only expedient for saving the work." Therefore, in 1848, a thin little octavo volume of 154 pages appeared, called *Index to Subjects Treated in Reviews and Other Periodicals*. This indexed 560 volumes. As soon as the edition was announced, the orders, chiefly from abroad, exceeded the entire 500 copies printed. The first edition was so useful that a second edition was brought out in 1853, with six times the amount of material contained in the first, with the title, *Index to Periodical Literature*.

It is interesting to note in these days of advertisement, and even of self-advertisement, that in the first edition of this most important work, Mr. Poole omitted his name entirely from the title-page. And indeed, the preface to the 1882 edition gives us the picture of a singularly modest and attractive personality. Indexing is, of course, one of the more technical branches of literary work, and we are apt to assume that the compilers of indexes and other similar works of reference belong to the dry-as-dust order of humanity. Therefore Mr. Poole's very human and pleasantly written preface has an especial interest.

Although "the libraries of the country clamoured for a new edition of Poole's Index brought down to date,"

Mr. Poole's other duties rendered it impossible for him to undertake the work. In 1876, at the first meeting of the American Library Association, Mr. Poole suggested a co-operative plan whereby a new edition might be made. Fifty libraries, ranging in geographical location from Salem, Mass., to Liverpool and Edinburgh, were assigned certain sets of periodicals to index according to a code of rules, Mr. Poole serving as editor of the whole.

Mr. Poole's tribute to the contributors is a warm one and his description of the co-operative feature of the work is full of interest. He says: "There was no subscription asked of any one, and not a farthing was contributed from any source, for no money was needed. There has been, however," he continues, "no gratuitous or charitable feature in it. Every contributing library will receive back the money value, some thirty-fold, some sixty-fold, some a hundred-fold, of the labour put into it by the librarian. This labour, which has been credited to his library, has been done usually in hours of his own, taken from rest and recreation. The librarian will have his pay in the consciousness that what he has done will benefit his library and his readers and may help his professional reputation." And Mr. Poole goes on to say that he "doubts whether an organization with ample funds for payment of workers would have brought about more effective results. When we begin to pay for service the knights leave the line and their places are filled with retainers and camp-followers."

There is a bit of human interest in connection with the Index which deserves mention. As Mr. Poole puts it: "The acceptable and unexpected services of a contributor whose name does not appear in the list must

not be overlooked. It was necessary in the progress of the work to make constant use of the express companies in transmitting copy to and fro between Chicago and Hartford. When the manager of the Adams Express Company heard of the character of the work and its co-operative feature, he claimed the privileges of a contributor and directed that all parcels relating to the work should be transmitted without pay."

As a result of all this successful co-operation, in 1882 the first volume of Poole's Index, as it is known to-day, was published. From the first little volume of 154 pages it has grown to a tome of 1442 pages¹

Supplements.—Five supplements to Poole's Index have appeared, at five year intervals, covering the years from 1882 to 1906. William I. Fletcher, who was associate editor with Dr. Poole in the third edition, was editor-in-chief of the supplements.

Character.—Poole's Index is the "most comprehensive of any periodical index. It includes many magazines now discontinued and many that are only useful in the large or special library. The work is an index to subjects and not to writers, except when writers are treated as subjects. For example, Macaulay's contributions to the *Edinburgh Review* appear not under his name, but under the subjects upon which he wrote, as Bacon; Church and State; Clive; etc. His name, however, appears in many references, but they are all subject references, which treat of him as a man, a writer, historian or statesman. Critical articles on poetry, drama, and prose fiction appear under the name of the writer whose work is criticised, thus a review of *Enoch Arden* will

¹ See preface to 3d edition of Poole's Index, 1882, and the *National Cyclopedia of American Biography*.

be found under Tennyson, but a review of Froude's History of England will appear only under England, as England is the subject. A poem, play, or story which can be said to have no subject appears under its own title." (Condensed from preface to third edition.) The name of the author is given in parentheses after the subject or title entry, the name of the periodical, in abbreviated form, volume and page, thus: Philosophy in England, and English Philosophers (D. G. Thompson). Internat. R. 9:619. At the beginning of each volume there is a list of the periodicals indexed, their full names, and the abbreviated forms.

Poole's Index Abridged.—An abridged edition was published in 1901, indexing 37 of the most used periodicals from their beginning through 1899. This was followed by a supplement for the years 1900-04. "This is the best guide for the library which desires to build up a moderate-sized periodical collection of complete or fairly complete sets." *Walter. Periodicals for the Small Library*

Poole's Index is now discontinued.

Readers' Guide to Periodical Literature.—The Readers' Guide came into existence in 1901. There are now three five-year volumes, 1900-04, 1905-09 and 1910-14, and three three-year volumes, 1915-18; 1919-21; 1922-24. The first indexes 67 English and American periodicals, the second 99 periodicals, and the others, a varying number, usually about 100. Volumes two to three also index, "in the same alphabet several hundred composite books, reports of learned societies, etc., published since 1900" These volumes are supplemented by the monthly lists which index 100 or more periodicals.

This list "is fully cumulated every quarter, the December number serving as an annual index for the year."

The Readers' Guide indexes by author as well as by subject, title entries are given when helpful, portraits and maps are indicated, important book reviews are included in volumes 1 and 2. The date of the magazine as well as the volume number is given thus:

Connolly, James Brendan, 1868—
Patsie Oddie's black night.
Scrib. M. 38:165-76, Ag. '05.

A list in the front gives the magazines indexed, their full names, and abbreviations used.

International Index to Periodicals.—"Formerly the Readers' Guide Supplement (v. 1, 1907-15, v. 2, 1916-19), indexing from 75-100 periodicals in less popular demand than those in the Readers' Guide. Now indexes (1927) about 284, including theological, educational and foreign, and some serials formerly indexed by the American Library Association. Appears five times yearly, cumulating for the previous year in January. Arrangement and form of entries like those of the Readers' Guide, but the periodicals included are usually of less direct use to the small popular library." *Walter. Periodicals for the Small Library.*

Dramatic Index.—The annual Dramatic Index, which is included in the annual Magazine Subject-Index (published by the F. W. Faxon Co.), is "the fullest reference list available for its subject in both book and periodical material. Many moderate-sized libraries find this special feature of great value." *Walter. Periodicals for the Small Library.*

Industrial Arts Index.—Beginning in 1913 an Industrial Arts Index covering technical periodicals dealing with a variety of industries is issued by the H. W. Wilson Company. There are also good indexes to engineering periodicals.

Agricultural Index.—"Indexes about 125 American and foreign agricultural publications and about 60 series of Experiment Station and other departmental bulletins and reports. . . . The January issue forms the cumulated volume for the previous year. Some popular and many practical periodicals are indexed, but the emphasis is on the more scientific type useful in agricultural schools and colleges and agricultural libraries." *Walter. Periodicals for the Small Library*. Monthly, except August and December.

Newspaper Indexes.—The New York Times Index, 1913-date. "A carefully made quarterly index, with entries under small subjects, exact reference to date, page and column, with plentiful cross-references to names and related topics. The brief synopses of articles answer some questions without reference to the paper itself. Each volume consists of four parts." *Kroeger and Mudge*.

St. Nicholas Index.—This is useful for work with children in libraries which have a complete set of St. Nicholas.

Index to v. 1-45, H. W. Wilson Co.

For the sake of clearness a list of the most important magazine indexes is given here.

List of Magazine Indexes.—

Poole's Index to Periodical Literature. 1802-81. Rev. ed. Bost. Houghton. 1891. 2 v. \$16.

Poole's Index to Periodical Literature, 1st Supplement. 1882-87. Bost. Houghton. 1888.

Poole's Index to Periodical Literature, 2nd Supplement. 1887-92. Bost. Houghton. 1893.

Poole's Index to Periodical Literature, 3rd Supplement. 1892-96. Bost. Houghton. 1897.

Poole's Index to Periodical Literature, 4th Supplement. 1897-1902. Bost. Houghton. 1903.

Poole's Index to Periodical Literature, 5th Supplement. 1902-07. Bost. Houghton. 1908.

Poole's Index to Periodical Literature, abridged edition. 1815-99. Bost. Houghton. 1901. \$12

Poole's Index to Periodical Literature, abridged edition. Supplement. 1899-1904. Bost. Houghton. 1905. \$5.

Readers' Guide to Periodical Literature, v. 1, 1900-04; v. 2, 1905-09; v. 3, 1910-14; v. 4, 1915-18; v. 5, 1919-21; v. 6, 1922-24; v. 7, Jan. 1925-June, 1926. N. Y. H. W. Wilson. 1905-date.

Readers' Guide to Periodical Literature (monthly except July). N. Y. Wilson. Prices on service basis. Apply to publisher.

EXERCISES.

Note: In every case the student should note all the indexes consulted, indicating the one where the reference was found.

1. Look up in any of the magazine indexes discussed a reference to one magazine article on any of the following subjects: Agriculture; aviation; disarmament, the South; the teaching of history. Write down the author and title of the article selected. Give below the full name of the magazine where the article is to be found, the vol-

ume and inclusive paging. Note the title of the index you used and the years it indexes, e g., Readers' Guide, 1900-04, and go to the shelves and get the article referred to.

2. Look up two articles for a debate on one of the following subjects. Prohibition; trade unions; immigration. (State the question and then find one article on the affirmative and one on the negative side.) Give titles of articles, full names of magazines where the articles are to be found, volumes and pages. Give title and volume of index and indexes consulted.

3 If you were in a library which had no books by Thomas Nelson Page and Rudyard Kipling, where could you find for a reader these two stories: "They," by Kipling, and "Meh Lady," by Page? Give exact reference.

4. Find a magazine article on Educational Measurement. Give author and title of article and state in what magazine it is to be found. What index did you use?

5. Find a magazine article on the poetry of Browning, Tennyson, or W. S. Landor. Give author and title of the article Name the volume and pages of the magazine where it is to be found What indexes did you consult?

6. Give the reference to the most recent magazine article on John Masefield that you can find. Give name and volume of index consulted.

7. Where can you find an article on the "fourth dimension"? Give name of magazine, volume, and pages. Give name and volume of index consulted.

Chapter VIII

ARRANGEMENT OF BOOKS ON THE SHELVES

If you were to walk into a room filled with books, piled indiscriminately on the tables and shelves, and if some one were to tell you that these books were the nucleus of your school library, doubtless there would at once occur to you the difficulty of finding any volume in the midst of such chaos. And if you felt at all responsible for the success of the library your first impulse would probably be to sort the books by their subjects, putting the poetry on one shelf, history on another, and books dealing with science on a third. The classifying of any library is nothing more than a systematic sorting and arranging of the books according to their subject matter.

Extent of Classification.—Very small libraries may perhaps stop after sorting the books into broad groups — history, poetry, fiction, biography, science, etc., but most libraries need to separate the books into smaller classes, differentiating for instance, the different sciences, and the history of different countries. In order to do this more detailed sorting of books consistently, it is necessary to have some definite system of grouping.

The Decimal Classification.—The scheme of grouping most frequently used by libraries is the Decimal Classification devised by Mr. Melvil Dewey.¹ This sys-

¹ Another important system of classification, though less widely used

tem divides the field of knowledge into 10 main classes which are represented by figures thus:

000-099 General works, that is books which treat of too many different subjects to be placed in any one group, i e., dictionaries, cyclopedias, and bound magazines.

100-199 Philosophy.

200-299 Religion.

300-399 Sociology, including Economics, Government, Education, and Sociology in its narrower sense.

400-499 Philology.

500-599 Science.

600-699 Useful Arts, including Medicine, Engineering, Agriculture, Domestic Science.

700-799 Fine Arts.

800-899 Literature.

900-999 History.

The groups are again divided into particular branches, philosophy, e g, into psychology, metaphysics, logic, etc.

The Books on the Shelf.—Each book, of course, has indicated upon it in some way the class in which it belongs. A book treating of religion receives the number 200 (or 204 or 220 or 250, as the case may be); other books labelled 200 are naturally placed beside it on the shelf, and as a result we find all the books in the library on the subject of religion grouped together. To take another example: All arithmetics will receive the number 511, all algebras 512; thus all the arithmetics in the library will stand together on the shelf, immediately followed by all the algebras.

Subdivision of the Main Classes.—The classification

than the Decimal, is the Expansive Classification, originated by Mr. C A. Cutter. In this the letters of the alphabet are used instead of figures.

is often made more minute by the use of more figures following a decimal point, thus:

- 973 U. S. History
- 973.1 U. S. History — Discovery
- 973.2 U. S. History — Colonial
- 973.3 U. S. History — Revolution.

and so on.

Biography and Fiction.— There are two classes of books which are not usually given numbers. These are individual biography and fiction. Lives of individuals are usually marked with a capital B and then arranged alphabetically by the surnames of the individuals about whom they are written. This brings all the lives of Washington together under W, all those of Lincoln under L, etc.

Fiction is usually arranged alphabetically by the author's surname. Sometimes an F is used for a group symbol just as B is used for a group symbol for individual biographies.

Arrangement by Author's Name.— In the case of the several arithmetics, mentioned above, we must decide in what order they shall stand on the shelves. They are arranged alphabetically by the surname of the author. Thus an arithmetic written by Abbott would precede one written by Bolton, and Wentworth's arithmetic would follow them both.

The Call Number.— If you will notice the next library book you hold in your hand you will probably find that it has on it a combination of letters and figures written thus: 973. F54. This number distinguishes the book from other books in the library. It is known as the "call num-

ber" of the book. The top row of figures (973) indicates, as we see by turning to the outline of the 10 classes, that the book is a history. We have already learned that all books in the same class are arranged alphabetically by the surname of the author; therefore, presumably, F is the first letter of the author's name. But what is the significance of the figures following the F? They are used merely to avoid confusion when there are several authors whose names begin with the same letter. For this purpose a scheme of letters and figures in tables has been arranged so that books can be alphabetized at a glance. This scheme is known as the Cutter Tables, and it is from these columns of figures that we get that second part of the call number. F54 is the combination given in these tables for the name Fiske and our call number ⁹⁷³F54 stands for Fiske's History of the United States. If we had a history of the United States by Fisher, we would, on referring to the Cutter Tables, give it the call number ⁹⁷³F53. The only reason for using this scheme instead of just alphabetizing the books by the author's names, as we go along, is to save time. Suppose for instance you were putting away books which were classed in 330. Now one of these we will say is by Laurence, and one by Larrabie; an instant's thought tells us that Larrabie precedes Laurence, but it is easier to see plainly marked on the backs of the books ³³⁰L33 and ³³⁰L37 than mentally to alphabetize the two names. Books are therefore arranged numerically on the shelves by the number on the top line of the call number, then alphabetically by the letter on the lower

line and numerically again by the figures following the letter: 942 942 942 942²
 A42 A89 B521 B74

Illustration 6

How the Shelves are Read.—Books on the shelves are read from left to right and from top to bottom like a page printed in columns.

EXERCISE.

For a class exercise it is recommended that the instructor indicate several books in each class of the ten for the students to find on the shelves. A different set of books should be given to each student.

² Many libraries discard the Cutter numbers for fiction and biography. Some libraries do not use these numbers at all, simply alphabetizing books by the authors' names.

Chapter IX

THE CATALOGUE

If you were looking for material on the method of electing the President of the United States and applied to the librarian of your school or college library, he would doubtless put into your hands Bryce's American Commonwealth. Sitting down with the two sizable volumes before you, you would not turn over the pages, one by one, until you found the information you wished; you might, it is true, glance over the table of contents, but if you were in a hurry, in all probability you would turn at once to the index in the back of the second volume, and looking down the columns until you came to "President, mode of election — 40, 46-52," consult the pages referred to. Suppose, however, that you have come to the library in search of a particular book, Monroe's Textbook in the History of Education, for example. You are not sure that the library owns a copy, and if it does you have no idea where the book is kept. In order to find it you would not walk about the library looking at shelf after shelf, and bookcase after bookcase. Just as you found a special section of Bryce's American Commonwealth by consulting the index to that book, you will find a special book by consulting the index to the library, that is the catalogue.

Why Catalogues Are Made on Cards.—It was at one time customary to print library catalogues in book form,

but the difficulty of inserting entries for new books in their proper alphabetical places, and the expense of re-printing has made the card catalogue almost universal. This grows as the library grows, since for each new book as it is acquired, the cards are easily added to the catalogue.

The Card Catalogue.—You are probably familiar with the appearance of the card catalogue—a case of small drawers, lettered in some such way as this: A-Anti, Anto-Az, B-Bir, Bir-Bro, etc., thus telling you

Illustration 7

which drawer to consult. All the cards in the catalogue are arranged alphabetically by their headings, like the words in a dictionary, and the catalogue is therefore called a dictionary catalogue. Cards are read from the front of the drawer to the back

Card for Author.—Every book in the library is represented by one or more cards in the catalogue. One card tells the author of the book, another the subject, and a third the title, if the title is distinctive. In the upper left hand corner of each card is written the *call number* of the book it describes, and this number indicates the

location of the book on the shelves. Thus if a reader wishes to find out whether the library has Creasy's *Fifteen Decisive Battles of the World*, he turns the cards in the drawer to the following card (see Figure 1).

904	Creasy, Sir Edward Shepherd
C91	Fifteen decisive battles of the world from Marathon to Waterloo. . . 324p.D. N.Y.1877.

Figure 1 Author card

The call number ⁹⁰⁴C91 designates the book and locates it on the shelf. The information following the title tells you certain things about the book: the number of pages, the size (D standing for duodecimo, O for octavo, F for folio), the place of publication (New York in this instance), and the date of publication (1877). This card is known as the author card.

Card for Title.—If the reader does not recall the author of this particular book, but knows some one has written a book with this title he turns the cards until he finds the following (see Figure 2):

904	Fifteen decisive battles of the world. 1877.
C91	Creasy, Sir E:S.

Figure 2 Title card

Again the call number designates the book.

Card for Subject.—In the third instance if neither the

author nor the title is known and the reader wishes to find material about the battles of the world, he turns the cards to the heading "Battles," in red, and finds this card (see Figure 3):

	Battles
904	Creasy, Sir E:S.
C91	Fifteen decisive battles of the world from Marathon to Waterloo. . . 324p.D. N.Y.1877.

Figure 3. Subject card. (Underscored words in red)

Questions Answered by the Catalogue.—Thus the catalogue answers the questions: (1) Has the library a book or books by a certain author? (2) Has the library a book by a given title? (3) What book has the library on a particular subject?

Books With More Than One Subject Card.—Of course a book treating of more than one subject often has several subject cards, for example, French's Homes and Their Decoration, which has one subject card under "House Decoration," and another under "Furniture." Sometimes one of these additional subject cards refers to a specific chapter of the book: thus Athletic Games in the Education of Women, by Dudley and Kellor, would have its main subject card under "Physical Education," and under "Basket Ball" a reference like Figure 4.

	Basket ball
371.74	Dudley, Gertrude & Kellor, F. A.
D84	Basket ball (See their Athletic games in the education of women. 1909.p.179-211)

Figure 4. Subject card for part of a book. (Underscored words in red)

Subject Cards for Biographies.—In biographies the name of the person who is the subject of the book is written in red on the top line (see Figure 5).

B W31s	<u>Washington, George, 1st pres. of the U. S.</u>
	Scudder, H. E.
	George Washington. 253p.D. Bost.1889. (Riverside library for young people.)

Figure 5 Subject card for a biography. (Underscored words in red)

Sometimes a book is written about more than one person, for example, Cody's Four American Poets, which would have a subject card for Bryant, one for Longfellow, one for Whittier, and one for Holmes. These cards would be like the card in Figure 4, and Figure 6 shows the author card

928	Cody, Sherwin.
C67	Four American poets. 254p.11.D. N.Y.1899.
	Contents:
	William Cullen Bryant
	Henry Wadsworth Longfellow
	John Greenleaf Whittier
	Oliver Wendell Holmes.

Figure 6. Author card for collective biography

Reference Cards.—If you do not find exactly what you want under the subject you have in mind, you may perhaps find it under a related subject, to which the catalogue directs you by means of a reference like that in Figure 7.

Manual training, see also
Carpentry; Drawing; Industrial education; Trade
schools; Wood carving.

Figure 7. Reference from one subject to related subjects.
(Underscored words in red)

The reader, of course, does not know which of the two names for the same thing the library uses. It would be, for instance, legitimate to put all books about schools in the country under the heading "Country Schools," or under the heading "Rural Schools," though it would be confusing to use both. So the catalogue again serves as a guide by means of such reference cards as Figure 8.

Country schools see
Rural schools.

Figure 8 Reference from a heading not used to one that is.
(Underscored words in red)

A similar instance is the reference from an author's pseudonym to his real name, under which the library usually prefers to list his works. See Figure 9.

Twain, Mark, pseud. see
Clemens, Samuel Langhorne.

Figure 9. Reference from pseudonym to author's real name

Card for Editor, Translator, and Compiler.—When a man has edited, translated or compiled a book the fact is indicated by the abbreviation, ed, tr, or comp, following his name; Figures 10 and 11.

821	Stedman, Edmund Clarence, comp.
S81	Victorian anthology. 744p.O. Bost.1895.

Figure 10 Card for compiler

883	Bryant, William Cullen, tr.
H76	Homer. Iliad; tr. into English blank verse by W:C. Bryant. 2v. in 1,O. Bost.1898.

Figure 11 Card for translator

Books With More Than One Author.—Books frequently have two authors, in which case both names are found on the top line of the card (Fig. 12) and the catalogue contains an additional card under the second author.¹

822	Beaumont, Francis & Fletcher, John.
B37	Best plays. . . ed. with an introd. by J. St. L. Strachey. . . 2v.il.D. Lond.1893. (Mermaid series.)

Figure 12 Joint authors

¹ In some catalogues only the first author's name appears on the top line of the card and then on the card for the second author, the words *joint author* follow the name

Series Card.—The series to which a book belongs is indicated on the author card and the main subject card (see Figs. 5 and 6), and if the series is an important one a card is made listing all the books in that series which the library owns (Fig 13)

International education series; ed. by W. T. Harris	
v.5	Froebel, F:W:A. Education of man. 1903.
v.26	Blow, S.E. Symbolic education. 1894.
v.28	Davidson, Thomas. Education of the Greek people. 1894.

Figure 13. Series card

Order of Cards in the Catalogue.—The biography of a person precedes the books he has written; for example, all the cards representing biographies of Dickens will be found in the catalogue before the cards representing his novels. Cards representing a man's work as author usually precede those representing his work as editor or translator, and cards representing his work as editor or translator precede those representing books of which he was joint author or joint editor, thus:

1. Stedman, Edmund Clarence
(The) nature of poetry
2. Stedman, Edmund Clarence ed.
American anthology
3. Stedman, Edmund Clarence, & Hutchinson, E. M.. eds.
Library of American literature.

Value of Other Information Given by Catalogue Cards. Edition.—You often find following the title of a book the abbreviations. "new ed." (new edition), or "New ed. rev and enl." (revised and enlarged). If the library contains more than one edition of a book, it

is important to have that fact indicated so that the reader may call for the edition he wants.

Paging and Volumes.—The number of pages or volumes, joined with the letter D, O, or F, indicating the size, gives you an idea of the extent of the book.² This is often useful. For a hasty review of United States history you would not choose McMaster's History of the United States in eight volumes.

Illustrations and Maps.—After the number of pages you will often find the abbreviation *il.* or *illus.* (for illustration) or the word *maps*, or both. It is convenient to know whether or not a book is illustrated and in the case of historical books it is important to know whether they contain maps.

Date.—This tells you whether or not the book is a recent one. This information is especially important in the case of scientific books when the date frequently determines the value of the book.

EXERCISES

- 1 What works by Sir Walter Scott, other than fiction, does the library contain?
2. Has the library any of Shakespeare's plays edited by Rolfe?
- 3 Give call number, author and title, of two books on any one of the following subjects: Education; Folklore; Geography; School Gardens; Manual Training.
4. How many different translations of Homer's Iliad are there in the library? Who are the translators?
5. What is the most recent book on biology in the library? Give author, title and call number.
- 6 Who wrote the Conduct of Life?

² The size is now usually given in centimeters, e. g. 21½ cm.

7. Mention two United States histories in the library with maps and illustrations and give the call numbers.

8. Are there any accounts of the life of the author of the *Crown of Wild Olive* in the library? If so, copy the call number of one.

9. How many volumes of the *Riverside Educational Monographs* are there in the library? Of the *International Scientific Series*?

10. Look up one of the following subjects: Xrays; Colleges and Universities; School Hygiene; Botany. Mention two other headings in the catalogue under which you will find material allied to the subject you are looking up.

11. Has the library any books by Mark Twain? By Charles Egbert Craddock?

12. What works written by Kate Douglas Wiggin in collaboration with Nora Archibald Smith are in the library?

13. Give the call number and title of a collection of poetry which the library contains. Who is the editor or compiler?

14. Give the call number, author, and title of a book (not an encyclopedia or biographical dictionary) containing accounts of the lives of more than three persons.

Chapter X

HOW TO USE AND MAKE BIBLIOGRAPHIES

If you will examine one of your textbooks you will probably find at the end of the book a section headed in some such way as this "Books for Teachers," "List of Books," "Authorities Consulted," or, "Bibliography." These lists serve a two-fold purpose, they indicate, usually, the ground which the writer has covered as a part of his preparation for writing the book, and they also furnish suggestions for further reading and investigation on the part of the reader or student.

Meaning of Bibliography.—The word bibliography comes from the Greek noun, "book," and the Greek verb, "to write." It originally meant "the writing of books," from that it came to mean the "science which relates to the history, materials, and description of books in general"; while its third meaning, and the one which we most commonly use is "a classified list of authorities or books on any theme."¹

Complete Bibliographies.—Some bibliographies are complete or as nearly complete as human ability can make them. These are frequently the product of scholarship and long years of labor. The catalogues of the greatest libraries in the world, the British Museum, the Bibliothèque Nationale, etc., are consulted, if possible,

¹ See Century dictionary and James Duff Brown Manual of practical bibliography Introduction

the books themselves are examined. The compiler makes every effort to discover the record of every item that has ever been printed at any time or in any place about his subject. Examples are:

Rand, Benjamin comp. *Bibliography of Philosophy, Psychology and cognate subjects.* N. Y. 1905.

Cooke, G. W. comp. *Bibliography of James Russell Lowell.* Bost. 1906

Partial Bibliographies and Reading Lists.—Bibliographies range all the way from such monumental works as these to a few pages dealing with only one aspect of a subject. Such lists are called partial bibliographies. The term reading list or reference list is often applied to brief, popular lists which do not aim at completeness.

Periodicals, Society Proceedings, and Parts of Books.—Bibliographies, complete and partial, reading lists, and reference lists will not, it is obvious, consist wholly of entries referring to books. Periodical articles, proceedings of associations, like the National Education Association, will furnish a part of the material included. Sometimes a part of a book only will be listed. If, for instance, you were compiling a list of references on "Kate Greenaway," you would include the chapter "Kate Greenaway" in "De Libris" by Austin Dobson, and disregard for your present purpose the rest of the book.

Annotated Lists.—Bibliographies and reference lists differ also in the following respect: Some indicate only the bare fact that such books exist or have existed; others, give brief notes describing and evaluating the entries in order to serve as a guide to the reader or student. Bibliographies of this latter sort are said to be

"annotated." For an example, see C. K. Adams. *Manual of Historical Literature*. (Described on page 140.) Sometimes the brevity of a list serves as an evaluation: we would expect "A select list of books on nature-study," if compiled by some one fitted to do the work, to bring together for us the best material to be had on the subject.

We shall mention here only a few bibliographies which deal with the subjects most useful to teachers, bibliographies of history, literature, education, and some general ones will be discussed.

General Bibliographies.—Some bibliographies are not confined to a single subject, but include books in all fields:

Sonnenschein, W. S. *The Best Books*, a reader's guide to the choice of the best available books (about 100,000) in every department of science, art, and literature with the dates of the first and last editions and the price, size and publisher's name (both English and American) of each book, a contribution towards systematic bibliography. Ed. 3. N. Y. Putnam. 1910-26. Pt. 1-4. Pts. 1-2, \$5 each. Pt. 3, \$10. Pt. 4, \$12.

"A classified list with complete author and subjects index. It includes books that are in print; a few out of print books are given. There are brief characterizations of some of the books. The very best books on each subject are indicated by stars." *Kroeger*. The standard full bibliography.

American Library Association. *Catalog*. Wash., D. C. Supt. of Documents. 1904. \$2.

A much smaller general bibliography than Sonnenschein. A list of 8000 books on all subjects exhibited

at the St. Louis Exposition, 1904, as a model library. The books are first arranged by classes; in the second part of the catalogue the books are arranged in an alphabetical list under author, title, and subject. Date, publisher and price are given for all the books and a brief descriptive note for most of them.

American Library Association. Catalog, 1912-21. Chic. A. L. A. 1923. \$4.

Over 4000 annotated titles. Contains list of new editions and a children's list more basic and general than in earlier editions. Subject index and author and title index.

American Library Association. Catalog, 1926. Chic. A. L. A. 1926 \$6.

A basic list of 10,295 books for the general library, selected from all books in print. Covers every field of knowledge, children's books and fiction listed separately. Each entry gives full buying information, classification number, Library of Congress card number, subject headings and full descriptive note. Indexed by subject, author and title.

The Booklist: a Guide to the Best New Books (monthly, except August and September). Chic. A. L. A. \$2 a year.

"A list, with rather full notes, of the new books best suited to the average library. Issued by the American Library Association. Especially desirable new editions are noted. The selection of books and the notes are based on notes and reviews by experts throughout the country. A special 'High School Library List' and 'Small Library List' are regular features for libraries with very small incomes. Lists of pamphlets, public documents, etc., are included from time to time. Until October, 1917, called

the A. L. A. Booklist." *Walter. Periodicals for the Small Library.*²

Bibliographies in Encyclopedias.—There is one source of general bibliographical information available to every student who has access to a good encyclopedia. This is the bibliographical lists at the ends of articles. The Encyclopedia Britannica and the New International have excellent lists.

Bibliographies of History, General.—

Adams, C. K. *Manual of Historical Literature.* Ed. 3. N. Y. Harper. 1889. o p.

Arranged by countries; under country arrangement is chronological. The chapters are divided into two parts, except chapter one, the first giving descriptions of books; the second, suggestions for a course of reading. There are excellent critical notes and an alphabetical index of authors. Valuable for the earlier authorities, must be supplemented by other bibliographies for books published since 1889.

A new historical bibliography, based on Adams, is to be published by the Macmillan Company under the editorship of G. M. Dutcher and others.

Andrews, C. M., Gambrill, J. M., Tall, L. L. *Bibliography of History for Schools and Libraries*, with descriptive and critical annotations. Published under the auspices of the Association of History Teachers of the

² The "Best Books" of the year, a selected list published annually by the New York State Library from 1898-1925, is a valuable bibliography for the years it covers.

The Wisconsin Library Bulletin publishes a useful list for small libraries of limited income.

The Reading With a Purpose Series, American Library Association, gives in each pamphlet, a brief list of the first books to read on the subject represented by that pamphlet.

Middle States and Maryland. New ed. N. Y. Longmans. 1911. o.p.

Classified arrangement. Annotations. No author index.

American History.—

Channing, Edward, Hart, A. B., and Turner, F. J. Guide to the Study and Reading of American History. Rev. and augmented ed. Bost. Ginn. 1912. \$3.50.

"A classified bibliography with author, title and subject index, invaluable as a guide to the best reading on all periods and aspects of the history of the United States." *Kroegeer and Mudge*.

Larned, J. N. The Literature of American History; a Bibliographical Guide. Chic. A. L. A. Publishing Board. 1902. o.p.

"A very serviceable book, excellent in analysis, choice of titles, execution, and index. Brief, signed appreciations of about 4000 books." *Channing, Hart & Turner, Guide to the study and reading of American History*.

The appendix contains lists of books for "A good school library"; "A collection for a town library"; "A good working library." Supplements have been published covering the years from 1900-04.

This bibliography includes and characterizes poor books as well as good ones.

English History.—

Cannon, H. L. Reading References for English History. Bost. Ginn. 1910. \$2.50.

"Chronological arrangement with author and subject index. Planned for the teacher and librarian." *Kroegeer*.

Gross, Charles. Sources and Literature of English

History from the Earliest Times to About 1485. N. Y. Longmans. Ed. 2. rev. and enl. 1915. \$10.

"The best bibliography in English of English history for the period before 1485, valuable both for its selection of material and for the annotations. Includes more than 3,234 closely classified titles . . . with general index." *Mudge*.

Bibliographies of Literature.—

The most valuable bibliographies are not published separately, but as parts of books, for example, Schelling's "Bibliographical essay," and "List of plays, written, acted, and published in England between the years 1558 and 1642," which cover 190 pages of his Elizabethan Drama. In the Cambridge History of English Literature, ed by A. W. Ward and A. R. Waller, the bibliographies are full and useful; in the Cambridge History of American Literature, ed by W. P. Trent and others, the bibliographies cover more than 500 pages.³

Bibliographies of Education.—

Monroe, Paul, ed. *Cyclopedia of Education*. (See page 76.)

There are lists of references at the end of important articles.

United States Bureau of Education. *Bibliography of Education*. 1907 to 1912.

An annual list published by the Bureau as one of its bulletins. From 1899-1906 this bibliography was published each year in the *Educational Review*. From 1899

³ The guide to the best fiction, the guide to historical fiction, by E. A. Baker, and Nield's Guide to the best historical novels and tales, and the A. L. A. Catalogue and supplement and Sonnenschein's best books are of course bibliographies of literature. See also the A. L. A. Index to General Literature.

to 1907 it was compiled by Mr. J. I. Wyer, Jr., and others, since then, the library of the Bureau of Education has assumed the responsibility of it.

"An aim to present a thoroughly representative selection from the main classes of educational literature published in English during the years covered by the bibliography. Of publications in foreign languages, those judged to have special significance for American educators are mentioned." *Introduction to Bib. of Educ.* 1909-10.

These lists have a classified arrangement with an author and subject index. Articles in periodicals are included, a list of current proceedings and reports of educational associations with their contents is given. References are made to reports of state and city school systems and reports of college presidents. Descriptive and critical annotations are given for some of the entries.

In January, 1912, the Bureau of Education began publishing a monthly record of current educational publications, including books, periodical articles, proceedings and reports of associations. The arrangement is a classified one, with general author and subject index for each number, but no annual cumulation. Now appearing irregularly.

Bibliographies of educational subjects are published as bulletins of the Bureau of Education. Some of them are: Bibliography of Science Teaching; Bibliography of Exceptional Children and Their Education; Bibliography of Education in Agriculture and Home Economics; A Teacher's Professional Library; Bibliography of Studies in Secondary Education, etc.

Trade Bibliographies.—There is a class of bibliographies known as trade bibliographies. These are lists issued by publishers or booksellers, and their object is not to aid in selection, but to furnish information about prices, binding, editions, etc., useful to those buying or selling books. Publishers' catalogues should not be used

as a guide in choosing the best books on any subject. The chief trade lists in this country are: The United States Catalog of Books, in print January 1, 1912; entries under author, subject and title in one alphabet, with particulars of binding, price, date, and publisher. N. Y. Wilson. 1912. Supplement, 1913-17; 1918-21; 1921-24; U. S. Catalog of books in print. Jan. 1, 1927. N. Y. Wilson. 1928.

The Cumulative Book Index, monthly, 10 times a year. N. Y. Wilson.

Cumulates for the year and forms an annual supplement to the United States Catalog.

The American Catalogue, first published 1880-81, listing books in print in 1876, has had seven succeeding issues for an average period of five years each, the whole series covering the years from 1876-1910. The Publishers' Trade List Annual is a collection of publishers' catalogues for the year bound together in alphabetical order. Foreign countries have corresponding trade lists

How to Make a Bibliography or Reference List.—Probably most teachers have looked up material on some subject connected with their school work, though they may not have called it making a bibliography. In collecting even a brief list of references, however, a systematic method of procedure saves time and energy, and an orderly arrangement of material increases the value of the list. The following points should be noted:

1. FAMILIARITY WITH THE SUBJECT.—If the subject is unfamiliar, read the account to be found in a general reference book such as an encyclopedia, if an educational topic, in Monroe's Cyclopedia of Education.

2. STATEMENT OF SUBJECT.—State the subject clearly,

indicating definitely its scope. This will help you to keep the limits of your subject in mind.

3. COLLECTING MATERIAL.—

(a) *Whole Books*.—(1) Consult the library catalogue and examine the books on your subject which the library contains. (2) Some of these may contain bibliographies which will suggest other titles. (3) Note the list of books given at the end of the encyclopedia article. (4) Consult any of the special bibliographies listed in this chapter which are available and which bear on your subject (e.g., for recent books on an educational topic the chief source of information would be the Bibliography of Education published by the United States Bureau of Education).

(b) *Parts of Books*.—Use the American Library Association Index to General Literature to find parts of books dealing with your subject.

(c) *Periodical Articles*.—Use the periodical indexes which the library contains to find material on your subject which has been published in magazines.

The choice of aids will vary, of course, according to the subject of the bibliography or reference list.

4. RECORDING MATERIAL.—

(a) *Use Slips or Cards*.—Each reference should be entered on a separate slip. The completed list may be copied into a note book or on sheets, but slips or cards should be used for collecting material.

(b) *Accuracy*.—Make each entry accurately and put it in good form to save copying and to save going over the same ground twice. It is advisable to note on the back of the slip the exact source of the reference, e.g., Library Catalogue; A. L. A. Index; Poole's Index, v. 1; Readers' Guide, 1905-09; etc.

(c) *Form of Entry*.—

1. For book: example
Bourne, H. E.
The teaching of history and civics in the elementary and the secondary school. N. Y. Longmans. 1902.
2. For part of a book: example
Saintsbury, George.
(The) contrasts of English and French literature. (See his *Miscellaneous essays*. 1892. pp. 300-35.)
3. For periodical reference: example
McCook, H. C.
Language of insects. (See *Harper's Monthly*, Sept., 1907; v. 115, pp. 539-56.)
4. For reference to proceedings of associations: example
Miller, C. A. A. J.
Study of exceptional children. (See N. E. A. *Addresses and proceedings*, 1908, pp. 957-63.)

5. ARRANGEMENT OF MATERIAL.—This will depend somewhat on the subject. Usually the best arrangement is to group the books and parts of books alphabetically by authors and then the periodical articles alphabetically by authors.

EXERCISES.

Group 1.

1. Name an authoritative history of the French Revolution. Give author, title, date, and number of volumes. Where did you find the information?
2. Name three books, giving author and title, on the history of printing. Where did you find them listed?

3. Where can you find a list of references on Scholasticism?

4. Name three references to source material on the Plymouth colony. Where did you find the references?

5. Where can you find a critical essay on Washington Irving's Sketch Book? State where you found the reference.

6. Give author and title of a book on educational measurements published in 1924. Where did you find the book listed?

7. Mention (1) a book, (2) a magazine article, on some topic in education written by W. W. Charters since 1920. Where did you find the information?

Group 2.

After consultation with the instructor choose a topic and make a brief list of references, following the directions given in this chapter under How to Make a Bibliography.

Chapter XI

EVOLUTION OF THE BOOK

Ancient Writing.—At some time in the morning of history, primitive man developed the power to express pictorially what he had learned to say orally or by signs. These early records may have resulted from a need for putting facts down in "black and white," or they may have been the simple development of the imitative instinct. Whatever the cause, the savage, using material he had, scratched on bone, and painted on wood and bark and left the record of his civilization.

Materials.—From these pictures and signs developed letters and alphabets and the art of writing. The Ten Commandments were graven on two tablets of stone. The records of the Assyrians and Babylonians were written with the stylus on tablets of moist clay. These tablets were then baked and the writing preserved. Many ancient peoples used leaden tablets, which they inscribed by means of the stylus. Pausanias records having seen the original manuscript of Hesiod's Works and Days written on leaden tablets. Wooden and ivory tablets, two leaves or more, hinged with wire and covered with a preparation of wax, were in universal use in Rome during the Augustan Age and even later. Writing was done on the wax with a metal or wooden stylus, one end of which was pointed for writing and the other left

Illustration 9

Illustration 10

broad and unsharpened for erasing the impressions made in the wax

The tablets of metal and wood and the stone inscriptions that have come down to modern times, are records chiefly of the public acts, accounts, etc., of the government and the sacred accounts of the temples. Works of the imagination, the real literature of the Greeks and Romans and other ancient peoples, were written on other material—papyrus and parchment. However, there continued in use in England until the sixteenth century an interesting form of the wooden tablet—the horn book. (See illustration, p 229)

PAPYRUS.—The ancient Egyptians discovered a writing material in the beautiful reed that grew along the banks of the Nile. From this reed they manufactured a papyrus paper earlier than 2300 B. C. The process of manufacture is very clearly described by Professor J. H. Middleton. "The long stem of the plant was first cut up into convenient pieces of a foot or more in length; the pith in each piece was then very carefully and evenly cut with a sharp knife into thin slices. These slices were then laid side by side, their edges touching but not overlapping, on the smooth surface of a wooden table which was slightly inclined to let the superfluous sap run off, as it was squeezed out of the slices of pith by gentle blows from a smooth wooden mallet. When by repeated beating the layer of pith had been hammered down to a thinner substance, and a great deal of the sap had drained off, some fine paste made of wheat flour was carefully brushed over the whole surface of the pith. A second layer of slices of pith, previously prepared by beating, was then laid crosswise on the first layer made

Illustration II

adhesive by the paste, so that the slices in the second layer were at right angles to those of the first. The beating process was then repeated, the workmen being careful to get rid of all lumps or inequalities, and the beating was continued till the various slices of pith in the two layers were thoroughly united and amalgamated together

“For the best sort of papyrus these processes were repeated a third and sometimes even a fourth time, the separate slices in each layer being cut much thinner than in the coarser sorts of paper which consisted of two layers only. The next process was to dry and press the paper; after which its surface was carefully smoothed and polished with an ivory burnisher; its rough edges were trimmed, and it was then ready to be made up into sheets or rolls. There was nothing in the method of manufacture to limit strictly the size of the papyrus sheets either in breadth or length, the workman could lay side by side as many slices of the pith as he liked, and slices of great length might have been cut out of the long stem of the *papyrus*. Practically, however, it was found convenient to make the paper in rather small sheets, twelve to sixteen inches.”¹

Writing was done on one side only of a sheet of papyrus, in broad columns, with margins quite like the page of a modern book. Then the sheets of papyrus were glued together along the side edges, broad margins being left on both sides of each sheet for this purpose. About twenty sheets so joined formed the average length of a roll. To the right edge of the last sheet was glued

¹ Middleton, J. H. *Illuminated manuscripts in classical and mediæval times*, p. 22-23.

a thin strip of wood and another strip to the left edge of the first sheet. The manuscript was rolled tightly round

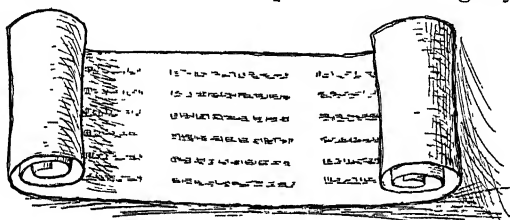

Illustration 12

the right hand stick and was called in Latin "volumen," a thing rolled up, from which we get our word volume.

Papyrus was exported from Egypt to Greece, Rome, and the cities of Asia Minor. Its use continued in Europe into medieval times as late as the eleventh century.

PARCIMENT.²—The skins of sheep and goats were used from very early times for writing material. Herodotus (460 B. C.) in his account of the introduction of the art of writing into Greece by the Phœnicians, mentions the fact that the Ionians called papyrus paper "prepared skins," because they had

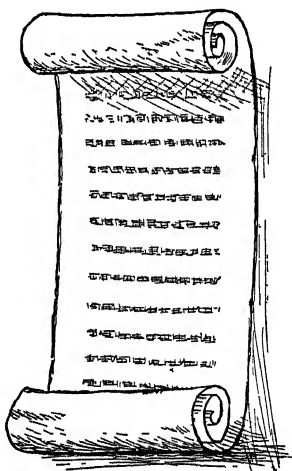

Illustration 13

² Cf. Vellum. Properly speaking vellum was made from the skins of calves but the terms parchment and vellum were loosely used and the distinction between them came to be that vellum was used for the finer, smoother, thinner material.

once been in the habit of using skins for writing on.³ The early name for this writing material was "membrana," but the later Greek and Latin name, "pergama,"

Illustration 14

Illustration 15

mena," from which parchment is derived, was given to it because the skins were specially prepared at Pergamon. Eumenes II, King of Pergamon, 197-159, B. C., reintro-

³ Middleton, J H Illuminated manuscripts, p. 14.

duced the use of skins for writing material and developed and improved the preparation of them, because he could not import papyrus from Egypt. Varro tells the story which Pliny⁴ quotes, that the Egyptian kings, jealous of the great library at Pergamon and wishing to prevent its growth, refused to export papyrus to Eumenes.

Parchment had distinct advantages over papyrus as a writing material. It was more durable, tougher for bearing the heavy strokes of a pen, and both sides could be used for writing. While papyrus manuscripts were

Illustration 16

always of the roll-form, manuscripts written on parchment began to assume the book-form even in classical times.⁵ The parchment was cut into leaves, the leaves were folded once, four of these were nested together and sewed in the fold. This combination, called a *quaternion*, in Latin (the source of the word quire), is the beginning of the "section" of the modern book.

PENS AND INK.—For inscribing on stone some form of chisel was used; the stilus, a pointed metal rod, was

⁴ Natural history, Book 13, Chapter II—quoted in Middleton—Illuminated manuscripts, p. 24.

⁵ Cim, A. Le livre, v. 1, p. 25 and 61

used for writing on wax and clay tablets; and a reed or quill pen for writing on papyrus and parchment.

The ancients used a black ink for most writing, a thick variety, much like India ink made of lamp-black and gum and water. Red, blue and purple inks were used on ancient manuscripts, the red for writing in headings, notes and titles, the other colors for decoration.

Manuscript Books. Ancient Times.—The profession of scribe was a very important one in Greece and Rome. It corresponded to the professions of printer and publisher of modern times. We know from contemporaneous accounts, that copying was done cheaply and quickly. No authentic records have been left in regard to the manner in which ancient scribes worked, but it is safe to infer that not only did they copy directly from the manuscript placed before them, but a reader often read from a manuscript for a number of scribes to copy simultaneously.

Medieval Books.—After the destruction of Rome by the barbarians, when the priceless public libraries and their books were ruthlessly destroyed, both pagan and Christian scholars the more carefully protected from destruction the contents of their private libraries. At Constantinople the destruction was never so great as at Rome. Many fires did damage, but all through the dark ages Byzantine scholarship preserved the Greek classics. Even in its overthrow by the Turks in 1453, manuscripts were not to any great extent deliberately destroyed at Constantinople. They were sold and scattered over the East and West.⁶

Monastic Scribes.—As early as 386, St. Jerome founded a monastery at Bethlehem where he introduced

⁶ Sandys, J. History of classical scholarship, v 1, p 437

the work of copying manuscripts. He recommended "that form of industry as one of the most suitable occupations of the monastic life."⁷ In other eastern monasteries the transcribing of manuscripts was assigned the monks among their manual labors. Thus were examples set to be worked out in greater perfection in the monasteries of the West.

Cassiodorus founded a monastery at Squillace in 540 (?) A. D., where he encouraged his monks to study the classics, not particularly for the sake of learning them, but for a better understanding of the Scriptures. He himself was an expert copyist and he encouraged his monks to do careful work.

At the famous monastery of Monte Cassino, founded by Benedict, the great work of the Scriptorium, which flourished later, not only in the Benedictine order, but also among the Cluniacs, Cistercians, and others, was instituted

In the monasteries of these Orders there was provided either one large room, called the Scriptorium, usually above the Chapter House; or individual alcoves, called carrels, around the cloister, where the work of copying manuscripts was performed. All transcribing was done under the direction of one supervising officer called the *armarius*, and the rule was laid down that no copyist could alter or change anything. The *armarius* provided the parchment, the pens, ink and markers for ruling and setting off the margins of the pages; he decided on the size and style of the letters; the monks simply followed directions. In the scriptorium a number of copies of the same manuscript were made simultaneously by the monks copying from dictation, the

⁷ Sandys. History of classical scholarship, v. 1, p. 621.

armarius usually doing the reading aloud Where a monastery was provided with carrels instead of a scriptorium, each monk copied directly from the manuscript before him, as was frequently the case also in the scriptorium.

The following vivid account of the daily task of the monastic scribe is taken from Madan's *Books in Manuscript*, pages 37-41: "A section of plain parchment is brought to him [the monk] to be written on, each sheet still separate from the others, though loosely put in the order and form in which it will be subsequently bound First, when the style and general size of the intended writing has been fixed, which would be a matter of custom, the largest style being reserved for psalters and other books to be used for public services on a desk or lectern, the sheets have to be ruled Down each side of the page, holes were pricked at proper intervals with an awl, and a hard, dry, metal stylus used to draw the lines from hole to hole, with others perpendicular to mark the margins; space was also left for illuminations when the place could be judged beforehand. . . . The scribe has now his ruled leaves before him, his pen and ink in readiness, and the volume to be copied on a desk beside him. he may begin to transcribe. How simple it seems! He is forbidden to correct, but must simply copy down letter for letter what is before him; no responsibility, except for power of reading and for accuracy is laid on him Yet all who know human nature, or who have studied palæography, will acknowledge that the probability against two consecutive leaves being really correctly transcribed is about a hundred to one . . . the wonder is, not that there is so much cause for critical treatment of the text of an ancient author, but that there

is so little. When the copyist had finished a quaternion, the writing was often compared with the original by another person. . . . Next, the sheets were given over to the rubricator, who inserted titles, sometimes concluding notes (called colophons), liturgical directions, lists of chapters, headlines and the like; and finally, if need were, to the illuminator. Nothing then remained, but that the binder's art should sew together the sections and put them in their covering. . . .

"The common binding in the Middle Ages for books of some size and interest was leather, plain or ornamented, white or brown, fastened over solid wooden boards, with raised bands, four or five in number, across the back. The sewing of the sheets and passing of the thread over these bands usually results in a firmness and permanence which no ordinary modern book possesses: not infrequently the solid oak sides may have given way from too great rigidity under violent treatment, while the sewing remains perfectly sound. In general, however, the oak sides are as permanent as the back and the solid pegging by which the parchment strings projecting from the thread-sewn back are wedged into the small square holes and grooves cut in the oak sides, is a sight worth seeing for workmanship and indestructibility."

Sometimes secular scribes were employed to come into a monastery and help with the work of copying; and the ornamentation, or illumination, as it is called, of manuscripts was often done by outside help, "when the abbey could not itself provide men capable of finishing off the manuscript by rubrication and painting."⁸

In the tenth, eleventh, and twelfth centuries the great-

est copying was done in the monasteries throughout Ireland, England, France, Germany, and Italy. Toward the end of the thirteenth century, the universities began to supervise the texts copied for their use, and gradually the industry passed from the monasteries into the hands of secular scribes licensed and controlled by the universities.

It is to the monasteries first and then the universities before the Renaissance, that we are indebted for the preservation and multiplication of the manuscripts of Greek and Roman classics and the beginnings of all modern literatures

The Printed Book.—The intermediate step between books written by hand and books printed from movable type, was the block-book—a book printed from blocks of wood, with both text and illustration carved upon the same block

Block-Books.—Block-printing had been practised by the Chinese as early as the sixth century, A. D., but it was not until the beginning of the fifteenth century that block-books were printed in Europe and so it is reasonable to suppose that block-printing in Europe developed quite independently of the Chinese invention. Even after the invention of movable types block-books continued to be issued during the fifteenth century. The number of different block-books in existence is estimated at almost one hundred.

Among the best known of the earlier block-books are the *Ars Moriendi*, the *Biblia Pauperum*, the *Apocalypse of St. John*, and the *Canticum Canticorum*. The *Speculum Humanae Salvationis* (Mirror of Salvation) is perhaps the most famous block-book because of the important place it holds in the history of printing. It is like

the block-book proper in that the pictures are printed from blocks; but the text, except in the case of one of the four editions, is printed from movable type, like the ordinary printed book. The sheets of the *Speculum* were arranged in quires, though printed on one side only, instead of being made up of the usual single sheets of the earlier block-books.

Movable Types.—When printing from movable types first began is still obscure. Contemporary accounts in the archives of Avignon show that experiments in printing with some kind of movable types, were being made there in the year 1444; and claims have been made in Holland for the invention by Laurens Janszoon Coster of Haarlem as early as 1440; but the earliest specimen of printing from movable types, known to exist, was printed at Mainz in 1454. This is the famous *Letter of Indulgence*, issued by Pope Nicholas V to the supporters of the King of Cyprus against the Turks. A copy of this, bearing the date of November 15, 1454, is now preserved in the Meerman-Westreenen Museum at The Hague. "In the years 1454 and 1455 there was a large demand for these Indulgences, and seven editions were issued. These may be divided into two sets, the one containing thirty-one lines, the other thirty lines; the first dated example belonging to the former. These two sets are unmistakably the work of two different printers, one of whom may well have been Peter Schoeffer, since we find the initial letters which are used in the thirty-line editions used again in an *Indulgence* of 1489 certainly printed by him. Who then was the printer of the other set? He is generally stated to have been John Gutenberg; and though we have no proof of this, or indeed of Gutenberg's having printed any book at all, there is a

strong weight of circumstantial evidence in his favour.”⁹

Gutenberg's fame rests upon two editions of the Bible, known as the 42-line and the 36-line Bible, which were printed by him at Mainz, the former probably in partnership with Fust. They are both Latin editions and the figures indicate the number of lines in a column to the page. The 42-line Bible is more generally called the Mazarin Bible, because the first copy that attracted attention belonged to the library of Cardinal Mazarin. “The 36-line Bible may have been printed at Bamberg, for Albrecht Pfister used this type there in 1461 and 1462 for the first books printed in the German language and the first that have survived which were illustrated with pictures.”¹⁰

About 1450, John Fust, a wealthy citizen of Mainz, supplied the money with which Gutenberg carried on his work of printing. In 1455, Fust sued Gutenberg to recover the loan, and won the suit, whereupon the press passed out of the possession of Gutenberg. The business was continued by Fust and Peter Schoeffer, his son-in-law, who had been in the employ of Gutenberg. This firm issued its first and most perfect work in 1457—a Psalter—and the first book with a printed date.

From Mainz, the art of printing was soon carried to other parts of Germany, to France, to Italy, and to England. To Italy and France, German printers introduced the art and set up printing presses; but to England an Englishman, William Caxton, born in Kent, brought the art that he had learned in Cologne and set up a press in Westminster.

⁹ Duff, E. Gordon. Early printed books, p. 22. The student is referred to the *Encyclopedia Britannica* under the article *Typography* for a full discussion of the invention of printing.

¹⁰ Winship, G. P. Gutenberg to Plantin. 1926, p. 13

Famous Printing Presses.—Of early presses outside of Mainz, the most famous were those of Sweynheim and Pannartz, established at Rome in 1467; Aldus Manutius, at Venice in 1488; Antony Koberger, at Nuremberg in 1472, Crantz, Gering and Friburger at Paris in 1470; William Caxton at Westminster in 1477; Wynken de Worde, successor to Caxton, in 1491; Richard Pynson at London in 1493.

In the 16th and 17th centuries the most celebrated presses were the Elzevir in Leyden; the Estienne in Paris; the Plantin in Antwerp; and the Cambridge and Oxford University Presses in England. "England was the only country in which printing started with books in the native language. Its first press was employed throughout its career in producing works in its own literature." ¹¹

"The spreading stream of printers trickled across the Atlantic, close on the heels of the Spanish conquistadores. Johann Cromberger of Seville, the leading 16th century Spanish printer, sent overseas an outfit in charge of a trusted workman, Juan Pablos, to establish the first American press at the City of Mexico in 1539." ¹² The first press in the United States was established at Cambridge, Massachusetts, in 1639. Its important productions were The Bay Psalm Book, printed in 1640; Eliot's Indian Bible in 1663; and The New England Primer between 1687 and 1690. Printing was begun in Boston in 1676; in Philadelphia in 1685 and in New York in 1693. After the revolutionary war printing presses were rapidly established throughout the country.

Famous presses of the 18th century were those of John

¹¹ Winship, G. P. Gutenberg to Plantin. 1926, p. 42.

¹² Ibid. p. 36.

Baskerville at Birmingham (England); of Robert and Andrew Foulis at Glasgow; of Bodoni at Parma; of the Didots at Paris; and in America of Benjamin Franklin, established in Philadelphia in 1728 under the firm name of Franklin and Meredith.

Among the well-known presses of the 19th and 20th centuries, the following are famous for the excellence and beauty of their typography.

The Chiswick Press was founded about 1810 by Charles Whittingham at Chiswick. In 1843 at this press the use of old face Caslon type was revived. The Diamond Classics,—miniature editions, noted for their utility and beauty—printed for the publisher, William Pickering, are the most characteristic volumes of this press.

In 1890 William Morris established his Kelmscott Press at Hammersmith. Of the fifty-three books printed there, all are noted for the ornamental character of their type and border decorations, and of them the edition of Chaucer, printed in 1896, is the most famous.

Among the private presses of England the Doves Press, under the management of Mr. J. Cobden Sanderson, is the next most distinguished after the Kelmscott. The character of its work is less decorative than that of the Kelmscott, but more pleasing in its typographical simplicity.

In America the DeVinne Press, founded by Theodore L. DeVinne in New York in 1883, has a world-wide reputation for the excellence of its press-work. The Merrymount Press, established at Boston in 1893 by Mr. D. B. Updyke, has been a prominent contributor to the best printing in America. "The aim of the Press has been to undertake the work of to-day in the spirit of the best days

of printing." In 1899 the Riverside Press of Houghton, Mifflin and Company at Cambridge, Massachusetts, established a special department for the production of fine books, under the direction of Mr. Bruce Rogers, who remained with the firm until 1912, during which time fine printing in America reached its highest peak.¹³

University Presses.—In addition to the historical Cambridge and Oxford University presses in England, there are some American university presses doing distinctive work in printing books, at Chicago, Columbia, Harvard, Princeton, the University of North Carolina and Yale. Many universities that issue their official publications under their own press names have no printing establishments of their own.

Later Developments.—The subsequent development of printing is largely a record of new and improved processes and machinery. Stereotyping, electrotyping, the invention of the linotype and the monotype have reduced the work of cutting and setting type by hand; have minimized the wear and tear on types; and in many other ways revolutionized the art of printing. The evolution of the press from the wooden screw, hand press of Gutenberg to the cylindrical, electric press of to-day has been the second great factor in the advancement of printing. The student will find a full account of these developments in any good encyclopedia.

Types.—For our particular purpose and study it is necessary, however, to know at least the important sizes and styles of type used in printing books. Until 1886 the various sizes of type were designated by names, but,

owing to the fact that the standards were not accurate, types of the same name, and supposedly of the same size, made by different foundries, could not be used side by side. Then the U. S. Type Founders Association selected the pica as a standard of measurement and, by dividing it into twelve equal parts and using a twelfth part— $\frac{1}{12}$ of an inch—called a “point” as a unit, they established a base for determining the sizes of all other bodies of type. All bodies are estimated on multiples of this “point”—the pica, 12-point, double pica 24-point, etc.,—and the numerical names are now used to designate them. The following illustrations show the sizes of type most commonly used in books:¹⁴

This line is set in 5 point or Pearl

This line is set in 6-point or Nonpareil

This line is set in 7-point or Minion

This line is set in 8-point or Brevier

This line is set in 9-point or Bourgeois

This line is set in 10-point or Long Primer

This line is set in 11-point or Small Pica

This line is set in 12-point or Pica

There are too many styles or “faces” of type to be described in this brief account; for convenience, therefore, is given the following illustration of types which are commonly used in book-work:

This line is set in roman

This line is set in italics

This line is set in bold-face

This line is set in Caslon

This line is set in Gothic

¹⁴ See De Vinne Plain printing types, 1906, for full descriptions and illustrations of types

Illustrations.—The illustration of books began before the invention of printing, with the crude wood-cuts of the block-books. Originally, designs were drawn on boards of pear, apple or sycamore wood, and cut in *relief* with a knife.

WOOD ENGRAVING.—This manner of wood-cutting continued until the eighteenth century when Thomas Bewick (1758–1828), in England, began to use blocks of box-wood, engraving his design across the grain of the wood with a burin. In the sixteenth century in Germany, the art of wood-engraving had received a new impetus in the work of Albert Durer, who drew his pictures on wood and had them faithfully cut by the engraver. Holbein's Dance of Death (1538), cut by Hans Lützelburger on wood, reached the high-water mark of wood-engraving. Then the art steadily declined until the great revival under Bewick and his successors. Bewick's most famous works are *Select Fables*, 1784; *History of Quadrupeds*, 1790; *History of British Birds*, 1797–1804. About 1861 it became the general practice to photograph the artist's drawing on the block, and so preserve the original with which to compare the engraver's work. Another development about this time was to make a metal cast of the wood-block and print from it. In the early 60's among the most famous illustrators was Arthur Boyd Houghton, whose work was engraved on wood by the Dalziel brothers. The *Arabian Nights* published in 1865 by Ward, Lock and Co. and *Don Quixote* published in 1866 by Warne, both contain some of his most remarkable work. At the present time the best wood-engraving is done in America. From the 80's on fine examples have appeared in the magazines—in the *Century*

in particular—where Timothy Cole's copies of paintings by the Old Masters have been exquisitely printed.

Printing illustrations from wood-blocks was usually done in the same manner as printing from type. The modern method of making a metal plate from the wood-block has not changed the manner of printing, for the plate is nailed to a block to make it "type-high," i.e., on a level with the type, and it is used side by side with the type.

LINE ENGRAVING.—In line engraving a very highly polished metal plate, either copper or steel, is used; with a burin, the design is cut, in reverse, in the metal. The result is an *intaglio* engraving, just the opposite of the design in *relief* which is cut out on a wood-block. This method of engraving was begun in Europe in the 15th century. The art came to England about 1588 and continued to flourish there until the middle of the 19th century.¹⁵

STEEL ENGRAVING.—In 1820 steel plates began to be used instead of copper. Steel was a more durable metal and could stand more wear and tear in printing; as a consequence it was cheaper and more books were illustrated than ever before. "The actual difference between a line engraving executed on copper and one engraved on steel . . . is so slight in a print that the one is not distinguishable from the other."¹⁶

ETCHING.—This kind of engraving is done on a metal plate, usually copper. The plate is heated and then coated with a "ground" of asphaltum, burgundy-pitch and beeswax. It is then held over the flame from a bunch of lighted tapers until the etching-ground is covered

¹⁵ Hayden Chats on old prints, p. 143.

¹⁶ *Ibid.*, p. 208

with a deposit of smoke. At this point it is ready for the design, which is drawn in reverse, by means of an etching needle. The needle cuts away the ground, leaving lines of copper exposed. The back of the plate is covered with varnish and then the plate is put into an acid bath. This mixture of nitric acid and chlorate of potash can touch the copper only where the design has been drawn with the needle. The acid bites into the metal and leaves a design. When the process of "biting in" has been finished, the wax and varnish are removed and the plate is ready for printing.¹⁷ Etching is more really artistic than other forms of engraving, due to the fact that more artists have done their own etching than have cut their designs in wood or engraved them with the burin.

MEZZOTINT.—In mezzotint engraving the copper-plate is "grounded" by running over the plate in every direction with a "sort of chisel, two and a half inches broad, sharpened to the segment of a circle, and with its surface engraved in many fine ridges, producing points at the edge."¹⁸ This process produces a "burr" over the plate and the design is made, not by cutting or "biting in" lines, but by scraping down the "burr" and smoothing out parts not to be printed. It is a better method for reproducing portraits than landscapes.

AQUATINT is another method of engraving and resembles etching. The plate is "grounded" by dusting it with finely powdered resin, or by covering the surface with a solution of resin dissolved in spirits of wine. After that the design is put on in very much the same way as an etching and the plate is put in an acid bath for "biting."

¹⁷ *Ibid*, chap. 2.

¹⁸ Hamerton. *Graphic arts*, 1883, p. 483.

LITHOGRAPHY, as the name implies, is the art of drawing designs on a special kind of stone, from which impressions can be made on paper. It was invented in 1798 by Alois Senefelder of Munich. The drawing is made on the stone with a greasy ink or chalk; the surface is then washed "with weak nitric acid and water to fix the drawing and somewhat reduce the surface of the stone; if the stone be now covered with gum, allowed to dry, and then inked, the ink adheres only to the drawing; and if a sheet of paper is placed on it, and the whole passed through a press, a print, or rather the drawing in ink will come off on the paper. This is roughly the art of lithography."¹⁹

Photo-Mechanical Processes.—Such were the chief methods of illustration up to about 1876 when the invention of photographic processes of reproduction largely superseded the work of the artist-engraver. Practically all book illustration is now done by some photo-mechanical process. While these methods have lowered, perhaps, the plane of artistic illustration, they have, nevertheless, broadened the field to such a remarkable extent, that a knowledge of, and a demand for, good illustration were never so great as now.

HALF TONES are made by photographing the drawing or photograph that is to be printed, through a "screen." This "screen" is made by placing together two thin pieces of plate glass, on which a series of parallel lines have been ruled diagonally. These intersecting lines give the effect of "mosquito-netting." With this screen directly in front of the negative, "the subject is photographed and the result is a negative completely covered

with a mass of fine transparent lines and dots.”²⁰ A print is made from this negative on a copper plate and the design is etched in *relief* for printing. Photographs and almost any colored subject are reproduced by this process.

THREE COLOR PROCESS.—This method aims to take any colored subject “and by photographing it three times, each time through a different colored piece of glass, to divide all the colors into what are called the three primary colors—red, yellow and blue. From each of these color separations a half-tone is made, and when these plates are put on the printing press, and the impressions are printed over each other in yellow, red and blue inks, respectively, the result is a printed picture reproducing correctly all the colors of the original subject.”²¹

ZINC ETCHING.—This process, often called “line engraving,” is the simplest form of photographic reproduction and is used for printing any line drawing in black and white. The drawing is photographed on a sensitized zinc plate. The lines of the picture are protected by a coating of resinous powder, which is melted on the plate and which adheres to the design, but not to the rest of the plate. The plate is put into a strong solution of nitric acid, which eats away the unprotected parts and leaves the design in relief. Mounted on a block, it is made type-high to be used for printing along with the type.

PHOTOGRAVURE.—Directly opposite from the *relief* plates made by the half-tone and zinc-etching processes, is the photogravure, or *intaglio* plate. It is a very expensive method of reproduction and is suitable only for limited editions and editions-de-luxe. There are several

²⁰ Hitchcock. Building of a book. 1906, p. 170.

²¹ Ibid, p. 174-5.

ways of making photogravure plates, the main point is that a copper plate is printed from a photographic positive which has been covered with a gelatine film, and the print is then etched in the copper. It is the most artistic of all photographic processes, but its cost limits the use of it.

Pedagogical Value of Illustration.—To-day when illustration has become so universal, and when much of it is so artistically mediocre, an additional responsibility is put upon the teacher and the librarian in the matter of book selection.

The pedagogical value of the illustrated book is recognized more than ever before and it is necessary that illustrations have the qualities of both accuracy and artistic fitness. Does the illustrator faithfully portray the idea of the author? Is the illustration so arranged that it comes near the matter it is describing? If the illustration is in color is it free from a glaring and crude quality? Has it the quality of imagination that arouses interest? These are the chief tests of the pedagogical value of an illustration.

Bindings.—The earliest specimens of books that have been preserved show that the ancients felt the need of protecting the contents of their books from injury. The clay tablets of the Assyrians were protected by terra-cotta covers, examples of which may be seen to-day in the British Museum. Papyrus and parchment books rolled on sticks were guarded by outside wrappers of papyrus and vellum, and ivory knobs attached to the ends of the sticks. In mediæval times the beautiful, illuminated manuscript books copied so patiently by the monks were protected by bindings of rough boards over which leather skins were stretched. The craftsmen discovered

that bindings could be made artistic as well as useful and the art of ornamental binding reached a high stage of development. Board and leather bindings were decorated with gold and silver designs, with ivories, enamels, and precious stones set in. Velvet ornamented with gold clasps and bosses was used for binding in England and on the Continent.²²

After the invention of printing, when books were made on paper instead of parchment or vellum, the style of binding was changed to meet the new conditions of arranging books upright on library shelves. This change resulted in a simpler binding in leather, unornamented with jewels or inlaid with metals.

"In the infancy of printing the whole art of book production was in the hands of the printer—he was printer, binder and publisher—but with the progress of the typographic art bookbinding speedily passed into the hands of the stationers. From this time the bindings group themselves naturally into two classes: trade bindings and private bindings. The printer supplied his books in sheets to the stationer for binding, but the wealthy patrons of literature continued to follow the dictates of their own taste, and have their books bound sumptuously."²³

Chapter XII

HISTORY OF LIBRARIES

With the development of literature and the evolution of the book, there arose, naturally, the question of collecting and preserving books for use, and so the history of libraries begins.

The first collections of books were probably those gathered together in the sacred temples and in the palaces of the kings of ancient times. These were not books in the modern sense, but were records, chiefly of religious matters, and annals of the kings, written on clay tablets.

Ancient.—In Assyria and Babylon, at Nineveh and Nippur, were the earliest collections of which we know anything. Assurbanipal's library at Nineveh consisted of some ten thousand distinct works—clay tablets with cuneiform inscriptions, including works in history, astronomy, and religion; school-books and dictionaries in the original languages and in translations. Many of these tablets are now in the British Museum, and among them, one on which the books are catalogued by subject. Excavations at Nippur by Professor Hilprecht disclosed a number of rooms adjoining the Temple, where clay tablets were arranged on shelves of clay. These tablets were also grouped by subject and the contents of the twenty-five thousand different tablets covered a variety of subjects.

Egypt.—In Egyptian libraries books consisted of

papyrus rolls. The earliest authentic date of any collection of these records is 3000 B. C. and we find reference to special libraries from 1500 to 1300 B. C., but it was not until the time of the Ptolemies from 300 to 200 B. C. that the great library at Alexandria was begun.

Greece.—There are almost no records of any libraries in Greece. The only authentic information we have is that Aristotle, Plato, Euripides and a few other famous men collected books. It is known also that 100 volumes were annually presented by the youth of Athens to the library of the Ptolemaion, "which was founded at Athens early in the Alexandrian age"¹ Cicero mentions the fact that there was an infinite number of books in the various libraries of Greece.²

Alexandria.—It was a Greek, Demetrius of Phaleron, who suggested to Ptolemy I the idea of founding the great library in the Greek city of Alexandria, and Greek scholars became its successive librarians. Here the learned men of the civilized world gathered to study and in this great library began the work of editing the texts of Greek literature and disseminating them. The number of volumes in the Alexandrian library is variously estimated from 200,000 to 700,000 papyrus rolls. In 47 B. C. it suffered the loss of 40,000 books, when Julius Cæsar set fire to the arsenal near by. The story goes, according to Plutarch, that Mark Antony presented 200,000 books from the library at Pergamon, a great rival of the Alexandrian library, to Cleopatra, who added them to the collection at Alexandria. The great library was destroyed during an invasion in 272 A. D. by the Em-

¹ Sandys, John. History of classical scholarship, 1906, v. 1, p. 87.

² Cicero. Tusculan disputations, II. 6. This statement, however, taken with its context does not lack evident exaggeration.

peror Aurelian. A smaller collection of books in a library called the Serapeion continued in existence for a century longer when it too was demolished in 391 A. D. during the reign of Theodosius I. After this the remnant of books was probably scattered among various temples; no authentic record exists of their actual fate

Pergamon.—Next in importance to the Alexandrian libraries was the library at Pergamon, the largest city in Asia Minor. To Eumenes II, 197–159 B. C., is given the credit of having founded the Pergamene library. Its collection of books, though never so large, rivalled the Alexandrian collection, and scholars flocked to it also. The head of the Pergamene school, Crates of Mallos, probably introduced the real study of literature to Rome when he visited there in 169 B. C. and it is supposed that his description of the Pergamene library had an influence on the building of Roman libraries³

The city of Pergamon became a Roman city by the gift of its last king, probably on account of the pressure of the Roman arms, but it is not known whether any part of the library was left to bequeath.

Rome.—Julius Cæsar planned to establish public libraries in Rome and commissioned Terentius Varro, "the most learned of the Romans," to collect and arrange the books, but Asinius Pollio had the distinction of being the first to dedicate a library to the public. This library was built on the Aventine Hill in 39 B. C. Greater than this, however, were the two libraries erected by Augustus—the Octavian and the Palatine. These buildings were modelled after the Pergamene library—a temple surrounded by colonnades from which opened a library. The library proper consisted of two compart-

³ Sandys History of classical scholarship, v 1, p. 159

ments, one for Greek and the other for Latin books, separated by a large curia. The Octavian building was burned when Nero fired Rome; and the Palatine was destroyed during the reign of Commodus about 190 A. D.⁴

The greatest of all Roman libraries, the Ulpian, was founded by Trajan about 100 A. D. It was also modelled on the Pergamene plan with two different rooms for Greek and Latin books. In this library were kept also the Roman archives. Although the books were removed to the Baths of Diocletian about 305 A. D. they were in use until the latter part of the fifth century.

Towards the close of the fourth century there were twenty-eight public libraries in Rome and many others throughout the provinces. With the downfall of the Western Empire in 476, the literary activities of Rome were very nearly at an end and the history of ancient libraries may be said to cease.

Mediæval Libraries.—In 330 A. D., when Constantine the Great moved the seat of empire from Rome to Byzantium and founded Constantinople, many Greek scholars followed him. He began the collection of manuscripts particularly of Christian literature, and his immediate successors continued the work until a large library was formed. Julian, the Apostate, founded a library of pagan literature. Libraries were founded in the monasteries of the East and many of the Greek classics were preserved therein throughout the Dark Ages, particularly in the monasteries of Mount Athos.

Monastic Libraries.—As the libraries in these eastern monasteries saved Greek literature from entire destruction through the Dark Ages, so, too, the monasteries of

⁴ Savage, Ernest. *Story of libraries*, p. 17

the West did a like service in preserving the manuscripts of Latin literature. In miraculous ways manuscripts were saved from the destroying hordes of vandals and found their ways to these safe, monastic retreats. Here they were copied by the monks, and together with church service books and works of theology, constituted the beginnings of monastic collections.

Among the most famous monastic libraries in Italy were those at Monte Cassino founded by St. Benedict in 529; at Squillace, by Cassiodorus about 540; and at Bobbio in Northern Italy, by an Irish monk, St. Columban, in 615. In France the principal monastic libraries were those of Cluny, Fleury, and Corbie; in Germany, those of Fulda, Corvey, and Reichenau.

The Benedictine Order was noted for its libraries, and in England no less than on the Continent did their monks establish them—at Canterbury, York, Wearmouth, Jarrow, Whitby, Glastonbury, Peterborough, and Durham.

With the dissolution of the monasteries during the reign of Henry VIII, "their libraries were dispersed, and the basis of the great modern libraries is the volumes thus scattered over England."⁵

University Libraries.—We have seen, in Chapter XI, how the work of copying manuscripts was gradually shifted from the monasteries to the universities. With the work of producing texts there developed the need of collecting them as well, and from the thirteenth century on, libraries were gradually founded in the mediæval universities of Italy, France, Germany, and England. "The fifteenth century was everywhere an age of Library-making; in the Library, the solitary student,

⁵ Madan, *Falconer Books in manuscript*, p. 76.

weary of the disputations of an effete scholasticism, could find richer intellectual pastures for himself.”⁶

Renaissance Libraries.—With the Revival of Learning there came, not only a thirst for knowledge, but to a group of famous men—rulers and scholars—the burning desire to collect manuscripts. These private collections of books are in large measure the beginnings of the great national libraries of Europe. Petrarch and Boccaccio were both eminent and assiduous collectors. They not only visited many places themselves in search of books, but they employed agents to travel over Europe in quest of them. Niccolo de Niccoli, 1364–1423, another famous collector, left over 800 manuscripts, which at his death came under the control of Cosimo de Medici. These, together with other collections formed by Cosimo, became the foundation of the Laurentian Library in Florence.

Associated with Cosimo was Tommaso Parentucelli, 1398–1455, afterwards Pope Nicholas V. He catalogued Niccolo’s collection and “added to the catalogue the titles of books he thought necessary to make the collection representative.”⁷ His love of books and his bibliographical knowledge were later put to excellent use, when as Pope he reorganized the Vatican Library, the foundation of which had been laid at the end of the fourth century.

In England, Duke Humphrey of Gloucester gave 600 manuscripts of his fine collection to the University Library of Oxford, afterwards the Bodleian. Richard de Bury, bishop of Durham, was the most energetic collector

⁶ Rashdall, *Hastings Universities of Europe in the Middle Ages* 1895, v 2, p 463

⁷ Savage. *Story of libraries*, p. 71.

in England. He travelled on the Continent in search of manuscripts and set up a scriptorium in his house where he had copies written and illuminated and bound. He gave to Durham College, now Trinity, Oxford, a part of his collection and drew up a set of rules to regulate the lending and use of his books.

With the invention of printing in 1450, the character and development of libraries were so radically changed that by the beginning of the sixteenth century we may well regard the mediæval period as ended.

Modern Libraries.—For three centuries the history of libraries is largely a story of accumulating books for the use of a very limited number of people, the scholars of the world, and to-day these same great libraries are the laboratories of scholarship the world over.

European.—In Italy the Vatican Library at Rome is renowned for its collection of important manuscripts. Among its treasures are Cicero's *De Republica*; Virgil manuscripts of the fourth, fifth, and sixth centuries, and a Bible of the fourth century. The Ambrosian Library at Milan, the Laurentian at Florence, and the Library of St. Mark at Venice complete the list of the most important libraries in Italy.

The Bibliothèque Nationale, the national library at Paris, is the largest and finest library in the world. It has grown since the fourteenth century and is the continuation of the old Royal Library. It "owes much to the pride with which not only France, but the ambassadors of France in foreign countries, have regarded it, as well as to the distinguished librarians who have fostered it, from DeThou and Colbert to M. Léopold Delisle."⁸

⁸ Madan Books in manuscript, p 89.

The Mazarine Library, the Library of the Sorbonne, the Bibliothèque St Geneviève, and the Arsenal Library, all in Paris, have important collections.

Germany has a large number of public and university libraries, many of which have renowned collections of priceless books. The Royal Library of Berlin, the Munich Royal Library, the university libraries of Göttingen, Heidelberg, and Leipsic have many treasures in both manuscripts and books.

In other European countries there are not so many libraries nor perhaps such famous ones as those already noted, but the Imperial library at Petrograd (St. Petersburg) with its collection of nearly three million printed books and over two hundred thousand manuscripts, many of them rare, with its treasure — the Codex Sinaiticus of the Greek Bible; its almost perfect sets of books from the Aldine and Elzevir presses and many other priceless possessions, takes rank among the four or five chief libraries of the world.

Spain has two important libraries, the Escorial and the National Library at Madrid. The Imperial Library at Vienna, the Royal Library at Brussels and in the Scandinavian countries the university libraries of Upsala and Christiania are all famous.

To American librarians the libraries of England are of greater interest and importance than those of any foreign country. The student of educational history needs to know when and how were founded the British Museum and the Bodleian; what are the chief treasures to be found in them and their contribution to educational development.

British Museum.—England's national library was founded in 1753. It was begun by uniting three private

collections of great extent the Cottonian, the Harleian, and the Sloane libraries. To these was added the Royal Library,* by George II in 1757. In 1759 it was opened at Montagu House under the name British Museum. The Royal Library collection had been very slowly accumulated by the kings of England from the time of Henry VII, and with no large or very notable addition until the time of James I, when Prince Henry secured the addition of a choice collection of manuscripts.

The Cottonian library was collected by Sir Robert Bruce Cotton, 1571-1631. It "contains many survivals from the old monastic collections";⁹ and "the chartularies of English abbeys, English historical deeds, and an immense series of English state papers are among the chief features of the library."¹⁰ In 1700, Sir John Cotton, grandson of the founder, put the collection into the hands of trustees for "public use and advantage."

The Harleian library collected by Robert Harley, Earl of Oxford, 1661-1724, numbers nearly 8,000 manuscripts and over 41,000 charters and rolls. It comprises works on English history, theology and general literature. Parliament bought this collection for ten thousand pounds and in 1753 transferred it to the Museum.

The Sloane collection comprised books, manuscripts and curiosities of various kinds gathered together by Sir Hans Sloane. After his death in 1752 it was purchased by the government for twenty thousand pounds and it was also added to the Museum.

To these collections others of great value have been added until to-day the collection has reached over three million books. "Among English-speaking peoples the

⁹ Savage Story of Libraries, p. 132

¹⁰ Madan Books in manuscript, p. 81

library of the British Museum stands without a rival, whether we regard the size or the importance of its printed and manuscript treasures.”¹¹

The Bodleian Library, Oxford, is, historically, the most interesting library in the world. Its foundation, begun with a small collection of books in St. Mary's Church, was greatly enriched between 1439 and 1446 by a donation of manuscripts from Humphrey, Duke of Gloucester. This gift necessitated more room, and an upper story, which became “Duke Humphrey's Library,” was added to the Divinity School. This room still exists, the oldest part of the Bodleian, though the books and furniture were ruthlessly destroyed by Edward VI's Commissioners in 1550.

Sir Thomas Bodley, ambassador to France and Holland under Queen Elizabeth, and a scholar, retired from court life and went to Oxford with the purpose of rebuilding the library. He set diligently to work refitting Duke Humphrey's Library; he used his influence in every quarter and secured valuable donations, and in 1602, the new library, possessed of some 2500 books and manuscripts, was opened. In 1610 Sir Thomas secured from the Stationer's Company the agreement to give to his library a copy of every book published in the kingdom.¹² This same year, 1610, he began the building of the main part of the quadrangle which is now the Bodleian, and before his death in 1613 had secured promises of other valuable gifts. The library continued to grow and passed through the Civil War unscathed. It suffered at the

¹¹ Madan. *Books in manuscript*, p. 80.

¹² This is the first library in England to receive the copyright privilege. Four others now have it: the British Museum, Cambridge University Library, Advocates Library, Edinburgh, and Trinity College Library, Dublin.

hands of careless librarians through the eighteenth century and even into the nineteenth, and now numbers over 800,000 volumes. "In the importance of its individual treasures it ranks nearly first among the collections of the world. Its Oriental manuscripts, Biblical codices, and Rabbinical literature are unrivalled; in materials for English history it is particularly rich, while its series of Greek and Latin *editiones principes* is unquestionably one of the finest."¹³

Charles Lamb has expressed the charm of the Bodleian in his essay, "Oxford in Vacation"; "Above all thy rarities old Oxenford, what do most arride and solace me, are thy shelves . . .

"What a place to be in is an old library! It seems as though all the souls of all the writers that have bequeathed their labours to these Bodleians, were reposing here, as in some dormitory, or middle state. I do not want to handle, to profane the leaves, their winding sheets. I could as soon dislodge a shade I seem to inhale learning, walking, amid their foliage; and the odour of their moth-scented coverings is fragrant as the first bloom of those scintial apples which grew amid the happy orchard"

Other English Libraries.—Cambridge University Library, with its valuable collections and very liberal lending privileges; the John Rylands Library, Manchester, with its 2500 incunabula (books printed before 1500); the Advocates Library, Edinburgh, founded in 1682; and the Library of Trinity College, Dublin, with its treasure—the Book of Kells—an eighth century manuscript and one of the most beautiful in the world, are the next in importance of the libraries of Great Britain.

¹³ Savage Story of libraries, p 154-5.

American Libraries.—The history of library development in the United States dates from the seventeenth century. Beginning with the private libraries of the colonial ministers, whose small collections of books in some instances became the foundations of college and other libraries, the development spreads out in four or five directions, and in the latter part of the nineteenth century evolves a distinctly American and democratic type—the tax-supported or free public library.

College Libraries.—The first kind of library founded in America was a college library, that of Harvard College in 1638. It began with a small collection of books given to the college by the Reverend John Harvard and for two hundred years was the largest library in the country. In the eighteenth century six other college libraries were founded: Yale in 1700; Princeton in 1746; University of Pennsylvania in 1755; Columbia in 1757; Brown in 1767, and Dartmouth in 1770. The nineteenth century has witnessed the development of libraries in every State University and in every standard college in the country. The larger university libraries all have valuable, and some of them, notable collections of books. These libraries are primarily for the use of their own students and faculties, but the very liberal custom of inter-library loans makes the particular, the rare, the valuable book accessible to smaller and less fortunate libraries whose readers may wish to use such books for serious work.

Proprietary and Subscription Libraries.—Library development branched out in another direction when Benjamin Franklin in 1731 began in Philadelphia the first subscription library in this country. “And now I set on foot my first project of a public nature, that for a sub-

scription library. . . . I was not able with great industry, to find more than fifty persons, mostly young tradesmen, willing to pay down for this purpose forty shillings each, and ten shillings per annum. On this little fund we began. The books were imported; the library was open one day in the week for lending to the subscribers, on their promissory notes to pay double their value if not duly returned." Begun as a subscription library, this foundation developed into a proprietary one — the Library Company of Philadelphia

Subscription and proprietary libraries, though different in conception, for our purpose of studying types, may well be grouped together "These libraries represent more or less completely the principle of corporate ownership instead of fees, and, if we judge by their atmosphere, there is just the difference between the proprietary and the subscription library in the attitude of its patrons that there is between the proprietor of land and the tenant."¹⁴ The idea of financial interest in the books whether as stockholder in the corporation or simply as renter, is the point of interest between this type of library and other types. Besides Franklin's library, the Charleston Library Society (1748), the New York Society Library (1754), and the Boston Athenæum (1807), other proprietary or subscription libraries were established in nearly every city in America. The influence of this type of library on the development and growth of the free public library has been marked.

State Libraries.— In 1796 New Jersey established the first *State Library*; South Carolina followed in 1814 with the same type; Pennsylvania in 1816, and New Hamp-

¹⁴ Bolton, C. K. Proprietary and subscription libraries A. L. A. 1912, p. 2.

shire and New York in 1818. Every state now has its state library, begun at first simply for the use of its legislature and government officials, but enlarged in some instances into libraries of very much wider scope; e g, the New York State Library and the Wisconsin State Library.

Library of Congress.—In 1800, just four years after the founding of the first state library, the Library of Congress was established in Washington by an Act of Congress “appropriating \$5,000 for the purchase of books and for fitting up a suitable apartment in the Capitol to contain them.”¹⁵ This library was destroyed in 1814 when the British burned the Capitol. Soon afterwards a new library was begun by the purchase of President Jefferson’s collection of 7000 volumes. This grew slowly to about 55,000 volumes when a second fire in 1851 destroyed over half of it. From 1864 to the present time the library has grown enormously under the able direction of Mr. Spofford and Dr. Herbert Putnam, who succeeded Mr. Spofford in 1899. The Library of Congress is truly a national library in the scope of its work and in the importance of its collection. It serves the entire country most liberally with its inter-library loans, and scholars find a most cordial and efficient service at the library. The size of its collection now places it in the fourth place of the world’s largest libraries.

School District Libraries.—One form of library development in America, which extended over fifty-five years, proved a failure—that was the school district library. In 1835 New York passed a law for the establishment of such libraries and spent over \$50,000 annually on the system. Twenty other states passed similar laws,

¹⁵ Bishop, W W Library of Congress. A. L. A. 1911, p. 1

but the system was generally a failure. "It had its place as an effective educator of public sentiment in the right direction, and perhaps by its very failure to meet the growing demand for free libraries in a satisfactory way, led to increased efforts to devise an effective scheme for that purpose."¹⁶

Tax-Supported or Free Public Libraries.—The history of libraries in America up to this point shows no material difference in types from those founded in Great Britain. But in 1848 when the Massachusetts legislature passed a law allowing Boston to tax itself to establish a free public library, the great public library movement was definitely begun. This antedated by two years the first free library act for Great Britain. To-day, the tax-supported library has been universally adopted not only in the United States but throughout Europe.

Many of the free public libraries have been richly endowed by private benefactors as well as supported by public taxation and no city of any importance is to-day without its public libraries any more than it is without its public schools.

State Aid.—A further step in library progress has been the natural growth of State Library Commissions and again Massachusetts is the first state to conceive the idea. In 1890 by an act of the Massachusetts legislature the Massachusetts Free Public Library Commission was created with the function of aiding the establishment and development of free public libraries throughout the state.

The idea has spread and now library extension carried on by state aid, whether by a commission, or the state library or the state education department, is found in all but fourteen of the forty-eight states of the union.

¹⁶ Fletcher, W. I. *Public libraries in America*, p. 21.

County Libraries.—"The county library, as now generally defined, starts with a small tax levied on the entire county, exempting (in most states) any community which is already taxing itself for library service. Provision is made for contracts to operate or serve local libraries, or to have the county system operated by an existing library. There is a county headquarters, in charge of trained workers, and from this an intensive system of book shipments and book service is carried on." ¹⁷

The county library is the most effective type of library to serve rural communities and particularly rural schools. In 1927, thirty-three states had permissive laws for the establishment of county libraries. California leads all the states in its system of county libraries.

Within the compass of this single chapter we have but briefly mentioned the stages of library development and have merely sketched a few of the great European libraries. The following list of references will furnish the student with much additional and interesting information.

PART II

SELECTION OF BOOKS AND CHILDREN'S
LITERATURE

SELECTION OF BOOKS

Chapter XIII

GENERAL PRINCIPLES OF SELECTION

Why it is Necessary for Teachers to Have Some Principles of Book Selection.—The subject of this chapter may seem, at first glance, one with which teachers have little or no concern. It is true that frequently all books for schools must be chosen from a list issued by the State Superintendent of Instruction, and if a collection of books is sent to the class rooms, the choice of the books is determined not by the teachers but by the Public Library, or the Board of Education, or whatever agency sends out the collections. It is, nevertheless, important that teachers should have in mind some clearly defined standards in judging books.

Not all books included in a list recommended by a State Education Department are of equal value and there is considerable opportunity for choice within the limits of such a list. This is a particular instance where teachers need principles of book selection, but there is a far broader reason for formulating standards of selection. Never has the printing press been more active than today, never has its output been more bewilderingly varied. More people than ever before are making a business of writing, and, like mushrooms, books seem to spring into being overnight. Such abundance and such variety

bring us to confusion unless we are fortified by definite standards of excellence; and confusion is indicated when we find teachers urging their pupils to read any book, mediocre or not, which interests them rather than a work of literature which does not

The Test for a Book.—In Mrs Richards' little autobiographical story, *When I Was Your Age*, she tells how for many years she used Charles Sumner as a sort of "imaginary foot rule." Any one or anything over six feet was "taller than Mr. Sumner." The best and most easily applied test for a book is to measure it mentally by what we know is real literature. This test is by no means a Procrustean bed; our "foot rules" range from Jane Austen's sparkling comedy of manners to the breezy spirit of adventure in *Treasure Island*; from the friendly companionableness of Boswell's *Life of Johnson* to the cameo-like beauty of Francis Thompson's *Essay on Shelley*. No two of these books make us feel the same way, but the mental atmosphere which they all leave behind them is a world apart from the atmosphere, or lack of atmosphere, created by the cheap, poorly written, ephemeral book. The way a book makes us feel is a sure indication of its value.

The Best Books.—The best books are those which leave us broader in sympathy, keener in appreciation, more courageous, more eager for the fine things of life. The books which do this will doubtless be different for each one of us; but so long as all of us find some books which will do this it does not matter if they differ from those which perform the same office for our friends.

Literature of Power.—It is from what De Quincey in his well-known definition calls the literature of power, rather than the literature of knowledge that this light

comes. Teachers whose daily work often keeps them closely confined to the literature of knowledge need to remember that the literature of power is waiting to offer them refreshment and inspiration. There are times when we may well say with Montaigne: "I doe not search or tosse over books but for an honester recreation to please and pastime to delight myselfe." *Essay on Bookes*.

General Test for Books.—A general test, then, and in a sense a personal test in selecting books is to ask "How do they compare with books we already know to be real literature? Do they leave behind them sanity, strength and inspiration?" For convenience in ranking particular kinds of books the following more detailed tests are suggested.

Specific Tests.—History.—In selecting histories we should ask such questions as these. First, concerning the author's preparation: 1. Has he based his book on source material or secondary material? 2. If the former, to how much of the original source material has he had access? 3. Has he himself been to the places he writes of? (As for example, Parkman explored the scenes of the French settlement of Canada and the French and Indian Wars.) 4. Has he informed himself of all recent material on his subject? (For example, in writing an account of ancient history the results of the most recent archaeological investigation would have to be taken into account.) The second group of questions concerns the author's attitude of mind. 1. Has he in mind what Mr. Morse Stephens calls the duty of the historian "to discover as far as he can and to narrate as impartially as he can what happened in the past," or is he so committed to some thesis of his own that he twists

facts in order to prove his thesis? Mr. Stephens cites Buckle's *History of Civilization* as a book which "bolsters up a theory" and endeavors "to prove that a certain philosophical scheme is justified by the facts of history." 2. Is the author impartial in treatment, or is he biased by national, political, or religious prejudice? The third group of questions deals with the ability of the historian as a maker of literature. Has he the critical faculty which helps him to make a wise choice of material, the imagination which gives him insight into the past and the skill in expression which makes the civilizations, the events, and the men he writes of, live again?

Of course some of the historians most successful in doing this last violate all the rules of an impartial treatment, yet so valuable are their books for their vividness, their power to make the past alive, their quality as literature, that they cannot be disregarded. The historical accuracy of parts of Carlyle's *French Revolution* is questioned by present-day scholars, but no student or general reader can afford to neglect this book with its striking pictures, its brilliant style. "To give a true picture of any country, or man, or group of men, in the past requires industry and knowledge, for only the documents can tell us the truth, but it requires also insight, sympathy and imagination of the finest, and last but not least, the art of making our ancestors live again in modern narrative. Carlyle at his rare best could do it. If you would know what the night before a *journée* in the French Revolution was like, read his account of the eve of August 10, in the chapter called 'The Steeples at Midnight' Whether or not it is entirely accurate in detail, it is true in effect; the spirit of that long dead

hour rises on us from the night of time past" G. M. Trevelyan. *Clio, a Muse, and Other Essays*. 1913. Page 17.

Tests for Biography.—For biography the tests are not unlike those applied to history. 1. What are the author's sources of information; has he had access to the papers, letters, and family records of the man of whom he writes? 2. Has he known him personally? 3. What use has he made of his material? That is, has he used it wisely and skilfully to make a careful portrait and at the same time has he taken care not to violate the laws of good taste? "It is possible to write an almost perfect biography without taking the public wholly and unreservedly into confidence. Lockhart, in his masterly *Life of Sir Walter Scott*, maintains a dignified reserve, a decent reticence concerning things which good taste naturally withholds from the gaping curiosity of the world" — *Agnes Repplier. Memoirs and Biographies in Counsel upon the Reading of Books*. 4. Is the biographer in sympathy with the man he tries to portray? 5. Has he the power to make us also feel sympathy and nearness?

Tests for Travel.—In books of travel we ask: 1. Has the author himself visited the country he describes? 2. Has he spent a long enough time there to justify his treatment? The book may claim to be simply the record of a traveller's impressions, or it may claim to be a study of national characteristics and customs. In the latter case we should expect the author to have actually lived in the country. 3. Does the author observe keenly and with sympathy? 4. Does he observe the law of proportion in his picture of a country or a people? 5. Has he the ability to convey to his readers the impression

made upon him? Suitable illustrations are of importance in books of travel.

Tests for Science.—It is necessary to divide books on Science into two groups: First, the books which are contributions to scientific knowledge, as Darwin's *Origin of Species*, and Tyndall's *Sound*; second, the books which are written to explain certain fields of scientific knowledge to the general reader, as Burroughs' *Squirrels and Other Fur Bearers*, Serviss's *Astronomy Through an Opera Glass*, and for children, Morley's *Bee People*, Parsons' *Plants and Their Children*.

Class 1. Pure Science.—1. Whether or not a book is a contribution to scientific knowledge must be left, of course, to the specialists and to time to determine, but the layman may consider the question of style, its clearness and exactness, and whether the book will have an appeal to the general reader who is interested in science, but who has not had scientific training.

Class 2 Popular Science.—"Popular science," that is, books belonging to the second group, must be accurate, and since they are written primarily for the general reader they must have a style that is not only clear but one which will awaken and sustain interest in the subject.

Nature Books.—Many books are written both for young people and adults with the purpose of encouraging observation of animals, and plant life, and arousing a love for out-of-doors. Such are: *Wake Robin* by John Burroughs, *White's Natural History of Selborne*, *Gibson's Eye Spy*, *Sharp's Watcher in the Woods*. The best of these books have value both as literature and as incentives to a love of nature, but we must be on our guard against the mediocre books of this group, which are too often inaccurate, undignified and sentimental.

The author of this type of book when writing for children is particularly prone to fall into the error of "writing down" to what he considers their level.

Useful Arts.—Books dealing with the useful arts, such as Watts' Vegetable Gardening, Terrill's Household Management, Wheeler's Woodworking for Beginners, Hopkins' Home Mechanics for Amateurs, to mention only a few examples, should be clear, practical, up to date, and fully illustrated, when it is necessary, by pictures and diagrams.

The Fine Arts.—Books on the fine arts, such as Tarbell's History of Greek Art, Mathews' Story of Architecture, Caffin's How to Study Pictures, Krehbiel's How to Listen to Music, etc., besides being accurate and reliable should have the power to awaken and promote the quality of appreciation in the reader. Fine illustrations are of especial importance in books on painting, architecture and sculpture.

Economics and Sociology.—In the case of books on economics and sociology we ask somewhat the same questions as in the case of history. Is the book based on an impartial, thorough investigation of facts? Is the author familiar with the authorities on his subject? Does he present his facts fairly and impartially? Is his style clear and interesting?

Literature.—Last of all we come to literature—poetry, drama, essays, fiction. Here we can do no better than return to our first general test: How does the book—the thought and the manner of its expression—make us feel?

Poetry.—If it is poetry, does it lift us to heights where we breathe the bracing air of idealism? Does it lead us in other moods to what Lowell calls "the realm

of might-be, our haven from the shortcomings and disillusion of life"; or does it present such a truthful picture of the world in which we live, that it helps us to interpret life?

Drama.—Does a play enlarge our knowledge of human nature, as Shakespeare's plays? Stevenson says: "Few living friends have had upon me an influence so strong for good as Hamlet or Rosalind."¹ Does it charm our ears with the roll of stately blank verse and the ripple of dainty lyric as the Elizabethans? Does it sparkle with wit as the School for Scandal? Or give us a sweet and wholesome and inspiring land of make-believe as The Blue Bird and Chantecler, and Noyes's Sherwood, and Josephine Preston Peabody's The Piper?

Essays.—If our author is an essayist, does he stimulate thought and imagination, and make us feel the richer through contact with his wide human experience and gracious personality, as Montaigne and Lamb, Stevenson and James Russell Lowell?

Fiction.—If the book is fiction, does it help us to adjust ourselves to life by aiding us to understand other conditions of life than our own? Does it rest and refresh us by carrying us away on a magic carpet to lands of faery and the romance of chivalry and feudalism? Stevenson says in his essay on Books That Have Influenced Me: "The most influential books and the truest in their influence, are works of fiction. They do not pin the reader to a dogma, which he must afterwards discover to be inexact; they do not teach him a lesson which he must afterwards unlearn. They repeat, they rearrange, they clarify the lessons of life; they disengage

¹ Books that have influenced me.

us from ourselves; they constrain us to the acquaintance of others; and they show us the web of experience not as we can see it for ourselves but with a singular change — that monstrous, consuming ego of our being, for the nonce, struck out.” He adds, “To do so they must be reasonably true to human comedy,” and here we see clearly the difference between fiction which is real literature and the ephemeral current novel whose paper doll characters are able to show us none of the true values of life.

It is worth noting that in Mrs. Burnett’s novel, *T. Tembarom*, the hero gets his first comprehension of England, of the complexity and the traditions of the life to which he suddenly finds himself transplanted, through the English novelists. He says, in talking of reading to the old Duke of Stone, “I tell you, for a fellow that knows nothing, it’s an easy way of finding out a lot of things. You find out what different kinds of people there are and what different kinds of ways. If you’ve lived in one place and been up against nothing but earning your living, you think that’s all there is of it — that it’s the whole thing. But it isn’t, by Gee! . . . I’ve begun to get on to what all this means to you people; how a fellow like T. T. must look to you. I’ve always sort of guessed, but reading a few dozen novels has helped me to see *why* it’s that way. I’ve yelled right out laughing over it, many a time. That fellow called Thackeray — I can’t read his things right through — but he’s an eye-opener.” And later speaking of Kingsley’s *Hereward, the Wake*: “When Palford was explaining things to me he’d jerk in every now and then something about ‘coming over with the Conqueror,’ or being here

'before the Conqueror,' I didn't know what it meant, I found out in this book I'm talking about. It gave me the whole thing so that you *saw* it."

SOME AIDS IN BOOK SELECTION.

American Library Association Catalog, 1926. Chic.
A. L. A. 1926. \$6.

The Book List: a Guide to the Best New Books (10 numbers yearly). Chicago. A. L. A. Publishing Board.
\$2 a year.

These publications are described in the chapter on Bibliographies.

Book Review Digest. N. Y. H. W. Wilson Co.
Price on service basis.

Over 2500 books a year are recorded, with such information as price, publisher, a descriptive note, and an index of the reviews of the book. Plus and minus signs are used to show the character of the review, whether favorable or unfavorable. Published monthly.

Standard Catalog for High School Libraries; ed. by Zaidee Brown 2 v. N. Y. H. W. Wilson Co.

Bibliographies.—The bibliographies listed in Chapter X and other bibliographies should be consulted in buying books along special lines.

Reviews.—Many periodicals contain reviews of current books; the most important are those in the *Nation*, *New Republic*, *The Saturday Review*, *Atlantic Monthly*, *Books*, (the literary supplement of the New York *Herald-Tribune*).

Lists of Children's Books.—Special lists useful in selecting children's books are given in Chapter XXIII.

EXERCISE.

1. Name three books which seem to you to answer the general test in book selection and tell why.

2. Name one biography (other than those mentioned in the text) which you consider answers the tests for biography.

3. Mention a book which seems to you to answer the requirements for a nature book, compare it with one which you consider does not meet the requirements.

4. With the help of the Aids in Book Selection listed in this chapter, select:

- a. Ten books on history suitable for a school library.
- b. Three books on travel of general interest.
- c. Five recent books of value written for children.
- d. Three textbooks on the history of literature.

Give them in the order of their value.

Chapter XIV

SELECTION OF BOOKS FOR THE HIGH SCHOOL LIBRARY

The High School Library.—At the meeting of the Library Department of the National Education Association in 1909, the following statement was made: "A high school without a library is as impossible as a high school without a laboratory."¹ This suggests a further comparison. The word laboratory carries with it the idea of equipment, the best and most up-to-date devices for chemical or physical or biological study. And so the word library should suggest not a lumber room for the storing of infrequently used volumes, but a live means of supplementing the work of the classroom and of stimulating the students to a real interest in books.

The usefulness of the High School Library depends on three things: administration, instruction of students in its use, and the selection of books. The first two points have been dealt with elsewhere, the third will be considered in this chapter.

Reference Books.—The High School Library may very properly make the Reference Collection its first care. No matter how small this may have to be at first, consisting, perhaps, of only two or three books, it is essential to have some means by which the pupils may learn the use of books as tools. Something may be ac-

¹ R. J. Aley, Superintendent of Public Instruction of Indiana. Books and high school pupils. N. E. A. Proceedings. 1909. p. 846.

complished even with Webster's Unabridged Dictionary and a copy of the World Almanac. The next step should be a good encyclopedia. The New International Encyclopedia is excellent for the High School Library.² A good atlas is, of course, a necessity, a handbook of quotations and one good reference book from every class, or nearly every class, i e., history, biography, literature, sociology, and government, etc. (see Chapter V). The list at the end of this chapter suggests a small reference collection for a High School Library. It should be kept in mind that there is much useful reference material which may be had at little or no expense. Suggestions for collecting such material are given in Chapter XXXI.

Magazines.—Magazines form an important part of the Reference Collection, as they contain much valuable material for reference work which is made available by magazine indexes. The Readers' Guide to Periodical Literature is issued monthly by the H. W. Wilson Company, N. Y. Publishers should be consulted for the price, which varies with the number of periodicals subscribed for by the library. Only those magazines which are worth while should be subscribed for and, as a rule, the selection should be made from those indexed in the Readers' Guide. The report of the Committee on Library Revenues, American Library Association, 1923, gives \$1 per student as a reasonable minimum for the purchase of reading matter. Of this sum from \$75 to \$125 may well be spent for magazines, this sum to include binding and a periodical index. A list of magazines recommended for a High School Library will be found at the end of this chapter.

² See What is the best encyclopedia? by A. V. Milner in *Public Libraries*, v 18 105-6, March, 1913

Books for General Reading.—While it is true that the Reference Collection should be first provided for, the High School Library cannot fulfill its proper function until it has on its shelves books which will interest and appeal to the students and encourage in them a real love of reading. For many students formal education stops with the end of the high school course. For them there can be no better training than forming the library habit which will put within their reach the opportunity to continue their education after school days are over.

Co-operation with the Public Library.—In cases where the High School Library is unable to provide anything but reference books it may be possible to borrow books for general reading from the Public Library, or to supplement a small collection by a loan from the Public Library and from the State Library Commission. Though often expedient and helpful such loans ought not to keep the High School Library from building up its own general collection.

A Well-Rounded Collection.—Sometimes, owing to lack of funds, the growth of the High School Library must necessarily be slow, but the final aim of a well-rounded collection should always be kept in view. It must be remembered that there are all kinds of pupils to whom an appeal is to be made. Some boys do not naturally care for books, but if the library can contrive to attract them by some interesting, not too technical book on electricity, some book, which, like Brigham's Box Furniture, will show them how to make something, they may be led gradually to care for reading for its own sake. There should be, of course, representative books from the best of English and American literature—poetry, drama, essays, and fiction; plenty of good biog-

raphy; history; some of the best travel books; and up-to-date scientific books, not too technical in character. Good modern fiction is not without its use,³ though this might better come last on the purchase list. Fortunately the average boy if he finds out the thrilling character of Farrar's *Darkness and Dawn* does not care whether it was first printed this year or twenty years ago

Complete Sets of an Author's Works.—It is usually best to avoid complete sets of an author's works, duplicating instead the best and most called for volumes. Do not, for example, be tempted by an attractive offer of a "complete set" of James Fenimore Cooper. Much of it will stand on the shelves unused, while one copy each of *The Deerslayer* and *The Pathfinder* may prove insufficient for the demand. A complete de luxe edition in half morocco binding of any author has a most forbidding appearance on the shelves of a school library.

Editions.—Attractive editions have an important influence in fostering the reading habit. High school students are not too old to be charmed by the spirited and well colored drawings of E. Boyd Smith in Scott's *Ivanhoe* (Houghton, \$4.00), or Cooper's *Last of the Mohicans* (Holt, \$2.00), or by the edition of Bunyan's *Pilgrim's Progress*, illustrated by the Rhead Brothers (Century, \$3 00). Among inexpensive editions, *Everyman's Library* (Dutton, 80 cents each, reinforced binding \$1.00) is much more likely to attract young readers than the somewhat uninteresting *Home Library* (Burt) and the *Astor Library* (Crowell).⁴

³ See an interesting and suggestive article by Herbert Bates, *The school and current fiction*, *English Journal*, v. 1 15-38

⁴ Help in choosing editions may be found in the following: E. M. Pfutzenreuter, ed *Illustrated editions of High School Classics Univ*

The Reference Collection.—The following list of books for the reference collection of a small High School Library is suggestive rather than final and choice of books will, of course, be influenced by local conditions.

The Standard Catalog for High School Libraries (H. W. Wilson Co.), Books for the High School Library (American Library Association), The Children's Catalog (H. W. Wilson Co.), and the Graded List of Books for Children, compiled by the Elementary School Committee of the Library Department of the N. E. A. (American Library Association), will serve as authoritative aids in choosing books for both the reference and the general collection.

Owing to lack of space it has been impossible to include annotations. Descriptive notes for most of the books included may be found in Mudge, Guide to Reference Books; American Library Association Catalog and Supplements; Standard Catalog for High School Libraries.

BOOKS FOR A HIGH SCHOOL LIBRARY

REFERENCE BOOKS

Dictionaries and Encyclopedias.

- 423 Webster's New international dictionary. Rev. ed. Springfield Merriam 1924 \$16
031 New international encyclopedia Ed 2. 25 v. N. Y. Dodd. 1922-25 Price on application to publisher.

Chapter XV

AN HISTORICAL SURVEY OF CHILDREN'S LITERATURE

Why We Should Know Something of the History of Books for Children.—For those who take a serious interest in the problem of children's reading, there is profit as well as entertainment in a survey of the children's books of former days. Those who are trying to provide the right reading for all sorts of children will find it helpful to study the qualities in children's books which have kept them alive through many generations of boys and girls. Just as we call upon the memory of our own childish tastes to aid us in sifting the mass of juvenile literature to-day, so we may turn to the books read by our grandmothers and great-grandmothers to find, under all the changing fashions of speech and thought and custom, those vital qualities which go to make up a child's classic, and keep some of the quaint little volumes of olden time still as dear to childish hearts as in the days of hoopskirt and courtesy.

The Beginnings of Literature for Children.—Some writers on the history of children's literature take as their starting point Isaac Watts's *Divine and Moral Songs*, published in 1715. Mrs. Field, however, in her *The Child and His Book*, an *Account of the History and Progress of Children's Literature in England*, begins her record with the times before the Norman Conquest.

Children's Literature Before 1066.—To be sure, the children's books of those early days hardly coincide with our modern definition of literature for children. They were chiefly lesson books, books written to give instruction, and most of them were probably only available to the pupils in the monastery schools. But this very early period in the history of children's literature is so little known that it is worth while to consider it in beginning our survey.

ALDHELM.—The author whom Mrs. Field notes as the first to write a book which was definitely intended for young people was Aldhelm, Abbot of Malmesbury, living in the seventh century. This book was called *De Septenario, de Metris, Ænigmatibus, ac Pedum Regulis*, according to Henry Morley, "first citing the numerous examples of the Scriptural use of the number Seven, adding to this a small treatise on Latin Prosody, which passes into the form of a dialogue between pupil and teacher; and then presenting to the pupil in Latin hexameter a collection of enigmas, which he is asked to solve and scan¹ . . . After the enigmas the dialogue is resumed and in reply to the questions of Discipulus, Magister tells of the rules governing the feet of Latin meters, closing with a final section upon Prosody in general."²

BEDE AND ALCUIN.—To the Venerable Bede, born in 672, are attributed various school texts on grammar, rhetoric, and music, and Alcuin, who was born about the time of Bede's death, probably 735, and who became a resident of Charlemagne's court, followed Bede's example. With Alcuin the dialogue was a popular form.

¹ That on the pen, *De penna scriptoria*, with a translation into English is given in Morley's *English writers*, v. 2, p. 136-7.

² *Ibid*, v. 2, p. 135-37.

He employed it for his grammar, which was divided into two parts; the first, a dialogue between Alcuin and his pupils on philosophy and liberal studies in general, the other, a dialogue on grammar between two boys, one a Saxon, and one a Frank. Another dialogue is called the Disputation of Pepin, the Most Noble and Royal Youth, with Albinus, the Scholastic. Here the author ranges rapidly over wide territory in such fashion as the following:

Pepin What is water? *Albinus*. A supporter of life; a cleanser of filth. *Pepin*. What is fire? *Albinus*. Excessive heat; the nurse of growing things; the ripener of crops. *Pepin*. What is cold? *Albinus*. The febricity of our members. *Pepin*. What is frost? *Albinus*. The persecutor of plants; the destruction of leaves; the bond of the earth; the source of waters. *Pepin*. What is snow? *Albinus*. Dry water. *Pepin*. What is the winter? *Albinus*. The exile of summer. *Pepin*. What is the spring? *Albinus*. The painter of the earth. *Pepin*. What is the autumn? *Albinus*. The barn of the year.³

The fact that almost the first use a child makes of language and the power of speech is to ask a constant series of questions, seems to suggest a psychological reason underlying these early dialogues.

ÆLFRIC'S COLLOQUY.—Toward the end of the tenth century we find one of the most interesting of these early books for young people in Ælfric's Colloquy. It was written while the author was teaching in the monastery at the town of Winchester—still famous for its boys' school. The book, according to Henry Morley in *English Writers* (v. 2, p. 311), "was, by making the disciple

³ West's Alcuin, c. 1892, p. 107

who begs to be taught, answer questions on his own occupation and the various trades of his companions, to introduce into a not very long lesson book, the Latin for the greatest possible number of words applicable to the different pursuits of common life." Incidentally, of course, it illustrates manners and customs of the day, the life of the oxherd, the cook, etc., the customary diet of young people, and other details of their daily life.

Fifteenth-Century Rhymed Treatises.—The books mentioned and the others of the period were written in Latin. Occasionally, as in the Colloquy, there is an inter-linear translation into Anglo-Saxon. Not till the fourteenth century do we find English used to any extent as a written language. During the fifteenth century, treatises in rhyme became very popular, instruction in all sorts of subjects, from Latin grammar to religion, being given in this way. Most of the treatises on manners and morals, and they are numerous, are addressed to young people, though servants are not forgotten. It is probable, however, that these treatises reached only a limited class, for book making at this time was too costly for any but the members of the higher classes, and those connected with wealthy houses, to own or to have access to books. The instruction, too, in the main, seems to be addressed to the boys of noble family, who were brought up in the houses of other nobles, serving first as page, then as esquire, which rank in its turn led to knighthood. Dr Furnivall in vol. 32 of the Early English Text Society Publications has preserved a number of these quaint manuals.

THE BABEES BOKE.—Most familiar perhaps by name, is *The Babees Boke*; or, *A lytyl Reporte of how Young People should behave*, its date, about 1475. The writer begins by stating that his book is only for young people,

"babees yonge," and, after an introduction of fifty-six lines, proceeds in the remaining one hundred and sixty, to set forth the "whole duty of children." They are to look at people who speak to them and listen until they have finished without letting their eyes wander about the house. Until they are told to sit down, they are to stand quietly, not "leaning on a post," or fingering anything, are not to turn their backs to any one nor interfere when their lord or lady is talking about the household. Especially are young people cautioned as to their table manners: they are not to lean on the table, or fill their mouths too full or eat with their knives, or cut their food like farm labourers!

THE BOKE OF CURTESYE.—The Boke of Curtesye, which was well known before the introduction of printing, dating from about 1460, consists of eight hundred and forty-eight rhymed lines, divided into three books. The first book describes the correct behavior for a young gentleman who dines at the house of a nobleman, the proper way to enter the room and greet his host, and then detailed rules for table manners similar to those in the Babees Boke. The second book gives moral advice and instruction, and the third book sets forth in much detail the duties of all the officers of a great household, porters, cooks, carvers, ushers, etc., all of which was doubtless illuminating and useful to the young page who wished to rise in his master's service. For many of these household and even menial tasks fell to the share of the lads, noble in birth though they might be, who were brought up as pages in noblemen's houses.

CAXTON'S BOOK OF CURTESEYE.—Another Boke of Curteseye, called, to distinguish it, Caxton's Book of Curteseye, was printed by Caxton, about 1477, thus indi-

cating the popularity of these treatises. It is noticeable because in addition to the usual rules for behavior at table, in church, and when serving at meals, the author suggests the books which "Lytyl John," to whom the poem is addressed, should read. To quote from Dr Furnivall's preface to the reprint in the Early English Text Society papers (Extra series, vol 3), "It was very pleasant to come off the directions not to . . . burnish one's bones with one's teeth, to the burst of enthusiasm with which the writer speaks of our old poets." "Lytyl John" is bidden to read Gower.

"Hym to rede shall give you corage
He is so full of fruyt, sentence and langage"

Occlif (Occleve), Father Chaucer, Lydgate, these writers who "reaped the fresshe fields," gathered up the "faire flowers" and the "treasure and richness of silver words," until he who would have the same,

"Must of hem begge, ther is no more to saye
For of oure tounge they were both locke and key."

It is interesting to note, in passing, this early appearance (1477) of the familiar complaint often heard in our own day, viz., that all the really gifted writers are dead and gone!

Line 238 in the Caxton Book of Curteseye bids the reader,

"Remember well that manners⁴ maketh man."

It is reassuring to know that a goodly number of writers were thus endeavoring to inculcate the niceties of social intercourse. But some of the sins of omission and commission which they warn against make us shudder to

think what the "unmade" child or man must have been like.

STANS PUER AD MENSAM — Stans Puer ad Mensam (The Page Standing at the Table), about 1430, attributed to Lydgate, also addresses the page in a noble household and contains similar advice on table manners and general behaviour. Other books of this class were, The Lytylle Children's Lytil Boke, about 1480, the Boke of Nurture and Schoole of Good Manners, by Hugh Rhodes "of the Kinges Chappell," so popular that it was printed at least five times, the last in 1577; and another Boke of Nurture, by John Russell, usher to Humphrey, Duke of Gloucester, written about the middle of the fifteenth century⁴. One of the most popular of these manuals was the Schoole of Vertue and Booke of Good Nourture for Chyldren and Youth to Learne their Dutie By, written by F. S. Seager, 1577. "If any require any other little booke meet to enter children; the Schoole of Vertue is one of the principall, and easiest for the first enterers, being full of precepts of civilitie, and such as children will soone learne and take delight in thorow the roundnesse of the metre."⁵

SIMON'S LESSON OF WYSEDOM.—One of the most attractive of these treatises, because of its naïveté, is Simon's Lesson of Wyседom for all Manner Chyldryn. In its one hundred and two lines it seems to warn against every possible fault that a child could commit — throwing stones at dogs, horses and hogs, playing in church, tumbling in wells and brooks, losing books, cap, and gloves, soiling his clothes, telling untruths, being only

⁴ See Early English text society publications. Vol 32.

⁵ John Brusley Grammar schoole of 1612, quoted by Furnivall in E. E. T. S. Pubs. Vol 32, Foreword, p cxiii.

a few of the offences mentioned. Some of the lines read thus:

"And, chyld, worship thy fader and thy moder,
 And look that thou greve neither one nor the other.
 But ever among thou shalt knele adowne,
 And ask their blessing and their benesoun.
 And, chyld, kepe thy clothes fayre and clene,
 And let no fowle fylth on them be sene
 Chyld, climb thou not over house nor walle
 For no frute, bryddes, nor balle

* * * * *

And, chyld, when thou goest to play,
 Loke thou come home by lyght of day
 And, chyld, I warn thee of another matter,
 Loke thou kepe thee wel from fyre and water;
 And be ware and wyse how thou lokys
 Over any brynk, welle, or brokys;"

The author then suggests a reward for diligence,—

"And, chyld, rise by tyme and go to schoole,
 And fare not as a Wanton fool,
 And lerne as fast as thou may and can,
 For our Byschop is an old man,
 And therfor thou must lerne fast
 If thou wilt be byschop when he is past."

After mentioning the dire penalties which children will bring upon themselves by failure to profit by these instructions, the writer concludes,

"Thus may ye all be ryght gode men,
 God graunt you grace so to preserve yow, Amen!"⁶

THE GIRLS NOT FORGOTTEN.—That the girls were not neglected is shown by a manuscript of about 1430 entitled

⁶ Copied with slightly altered spelling from E E T. S. Pubs. Vol. 32, p 399-402 A partial and modernized version may be found in E V. Lucas's Book of verses for children

How the Good Wife Taught her Daughter, and by a French book, translated and printed by Caxton, called, *The Booke of the Enseynments and Teachynge that the Knyght of the Toure made to his Daughter.*⁷

THE BIRCHED SCHOOLBOY.—A little poem called "The Birched Schoolboy," date about 1500, while probably not written for children, presents in a life-like fashion what must have been the feelings of many a small scholar suffering under the discipline of a fifteenth century school-master; and, indeed, the complaint over school on Monday has a strangely modern sound.

"On Monday in the morning when I shall ryse,
At VI of the clock, it is the gise (way)
To go to school without a-vise
I had lever go XX mile twyse!
What availeth me though I say nay?"

In the last stanza, the boy, punished for truancy, consoles himself in true child fashion by drawing an imaginary picture of a fitting fate to befall his tyrant:

"I wold my master were an hare,
And all his bookes houndes were
And I myself a joly huntere:
To bloue my horn I wold not spare!
For if he were dede I wold not care.
What vayleth me though I say nay?"⁸

The Ballads.—Another class of literature though not written for children, doubtless contributed to their pleasure and amusement. Ballads circulated freely among the common people and must have appealed to the younger members of society as much as to the grown-people.

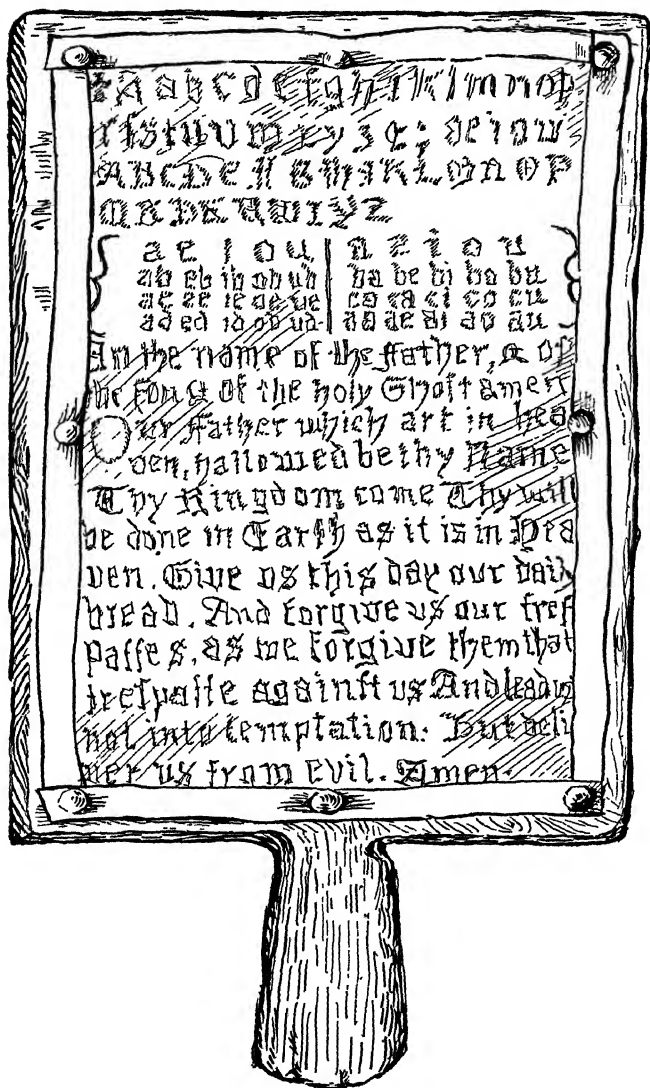

⁷ E. T. S. Pubs., vol. 32, and Mrs. Field's *Child and his book*, p. 46-7.

⁸ E. T. S. Pubs., vol. 32, p. 403-4. Also quoted in part in Field, p. 86.

Among these ballads were: Bevis, Adam Bell, Guy of Warwick, Friar Bacon and Friar Bungay, the Robin Hood series, and many others. Goldsmith mentions some of them in the *Vicar of Wakefield*. "The tale went round, he (Mr. Burchell) sang us old songs, and gave the children the story of the Buck of Beverland, with the history of Patient Grissell, the adventures of Catskin, and then Fair Rosamond's Bower."⁹ It was these ballads which formed many of the chap-books — the little cheaply made, rudely illustrated tracts which were so popular during the seventeenth and eighteenth centuries. It must be kept in mind that the chap-books were not written for children, but it is significant, as Mrs. Field points out, that those stories which have survived the longest are those which appeal most strongly to children, as Jack the Giant Killer, The Babes in the Wood, Tom Thumb, and others still familiar in the nursery.

The Hornbook.—Towards the end of the sixteenth century a new feature appeared in children's literature with the invention of the hornbook, and we find for the first time provision made for the children to handle their own books. Heretofore, even the school books were probably kept pretty closely in the masters' hands. The hornbook was the first attempt at making something less perishable and precious. Its appearance is familiar to us in pictures: a sheet containing the alphabet, mounted on an oblong piece of wood with a handle, and covered with transparent horn. There was usually a hole in the wooden frame so that it might be hung from the child's girdle. "The sheet which in ancient times was of vellum and latterly of paper, contained first a large

* *Vicar of Wakefield*, chap. 6

criss-cross (or, Christ's Cross) from which the hornbook was called the Christ-cross row, or criss-cross row. The alphabet in large and small letters followed. The vowels then formed a line and their combinations with the consonants were given in tabular form. The usual exorcism, 'In the name of the Father, and of the Son, and of the Holy Ghost, Amen'—followed, then the Lord's Prayer, the whole concluding with the Roman numerals."¹⁰ The hornbook is mentioned in *Love's Labour's Lost* and in *The Schoolmistress* by Shenstone.

The Battledore.—About 1770, some authorities say earlier, appeared a variation of the hornbook, called a battledore. This was of cardboard, made in three leaves which folded together. It "contained easy reading lessons and little wood cuts, besides the alphabets, numerals and so forth, but never any religious teaching. Now and then a short fable or didactic story appears"¹¹ The inventor was Benjamin Collins of Salisbury. Battledores were very popular, they sold in large numbers and were printed as late as 1840.¹²

The Orbis Pictus.—During the sixteenth and seventeenth centuries many new school books were written. To describe them in detail would turn this chapter into a history of education rather than a survey of children's literature. We mention only one, and that because it is often called "the first picture book for children." This is the *Orbis Pictus*, or, *The World in Pictures*, written by Comenius in 1657 in German and Latin. It was translated by Hoole into English in 1658. In the preface the author declares that his purpose is "to entice

¹⁰ *Encyclopedia Britannica*.

¹¹ Field. *The child and his book*, p. 121.

¹² *Ibid*, p. 122.

witty children" and expresses the hope that by this book "the scare crows may be taken away out of Wisdom's garden" Each object in the picture was given a number and the name of the object was then given in Latin and in the vernacular. It was very popular and many editions were issued.

Puritan Times.—In the seventeenth century what little literature there was for children assumed a stern and gloomy tone James Janeway, writing about the middle of the century, gives us, *The Token for Children, an Exact Account of the Conversion, Holy and Exemplary Lives and Joyful Deaths of Several Young Children*, and several similar works. The following is a sample of his verse:

"When by spectators I am told
What beauty doth adorn me,
Or in a glass when I behold
How sweetly God did form me
Hath God such comeliness bestowed
And on me made to dwell,
What pity such a pretty maid
As I should go to Hell!"¹³

Other books of this period were *Divine Blossoms, Prospect or Looking Glass for Youth*, by Francis Cockain.¹⁴ *The Apprentice's Companion*, containing "plain and useful directions for servants, especially apprentices, how to perform their particular duties to their masters, so as to please God, and discovering such sins and vices which are the common hindrances to them herein. With some examples of God's judgments upon such as have taken ill courses. Together with prayers and devotions

¹³ Ibid., p. 188

¹⁴ See Ibid., p. 191-92 for full title covering 12 lines.

for Morning and Evening To which is added a short and familiar Method of Arithmetic and some copies of the most useful writing hands”¹⁵ Another is Youth’s Divine Pastime, consisting of “forty remarkable Scripture Histories turned into common English verse With forty Curious Pictures proper to each story Very delightful to the virtuous employing the Vacant Hours of Young Persons, and preventing vain and vicious Divertisements Together with several Scripture Hymns upon divers occasions.”

BUNYAN.—The Pilgrim’s Progress though not written for the young must have been welcomed by many a child of that day as light literature, after these accounts of virtuous and short lived infants. And no doubt Bunyan’s masterpiece was a greater favorite than the book which he wrote with young people in mind, called Divine Emblems; or, Temporal Things Spiritualized; fitted for the use of boys and girls (at least he does not call them Young Persons!) The lines on the frog serve as a fair illustration:

“The frog by nature is both damp and cold,
Her mouth is large, her belly much will hold.
She sits somewhat ascending, loves to be
Croaking in gardens though unpleasantly.

COMPARISON

“The hypocrite is like unto this frog,
As like as is the puppy to the dog
He is of Nature cold, his Mouth is wide
To prate, and at true goodness to deride.
He mounts his head, as if he was above
The world, when yet ’tis that which has his love.
And though he seeks in Churches for to croak,
He loveth neither Jesus nor His Yoke”

¹⁵ Ibid, p 195-6.

EMBLEMS—"Emblems" were a popular form of literary expression in the seventeenth and eighteenth centuries and their vogue lasted through the early years of the nineteenth. Those of Quarles, George Herbert, and Richard Crashaw are rightly famous, but there were numbers of less gifted writers whose efforts were directed particularly towards children. An example is a little volume entitled, *Choice Emblems, Natural, Historical, Fabulous, Moral and Divine for the Improvement and Pastime of Youth, displaying the Beauties and Morals of the Ancient Fabulists; the Whole calculated to convey the Golden Lessons of Instruction under a new and more delightful Dress For the Use of Schools Written for the Amusement of a young Nobleman (who, poor child, is discovered on referring to the preface, to have been "not more than nine years old"!)*. This work reached an 11th edition in 1812. Each emblem consisted of a wood-cut, a description in verse, with a moral, an amplification of the description in prose, and the application.

In America.—The few books written, with children in mind, on this side of the Atlantic were either reprinted from the English books or were native products tinged by the same, or even greater gloom. We can guess what they were like from the titles: *Godly Children their Parents' Joy*; *Young People Warned, the Voice of God in the Late Terrible Throat Distemper*; *A Dying Father's Legacy to an Only Child*; and Cotton Mather's *Token for the Children of New England*, examples of children in whom the fear of God was remarkably budding before they died, added as a supplement to Janeway's *Token for Children*. The American *Token for Children*, Mr. Charles Welsh tells us, in his *Early History of Chil-*

dren's books in New England,¹⁶ was printed in Boston in 1700, from the English book by Janeway. Janeway's book itself was also extremely popular in America as well as another English book by Thomas White, called *The Little Book for Little Children*. This was first published in 1702 and contained among much that was morbid and gloomy, the famous, "A was an Archer."

THE NEW ENGLAND PRIMER—Sometime during the seventeenth century, probably about 1691, appeared the first edition of the famous New England Primer, which was reissued well into the nineteenth century. It is too well known to need description, first the alphabet with its rhymed couplets and triplets, from,

"In Adam's fall
We sinned all"

to

"Zaccheus he
Did climb a tree
His Lord to see,"

then the Lord's Prayer, the Creed and Catechism, some of Watts's Hymns, John Cotton's *Spiritual Milk for American Babes*, and ending with the famous Dialogue between Christ, a Youth and the Devil.

Fairy Tales.—Such were the books that were written for the children of the seventeenth century, but it is consoling to remember that to this period belong also the charming fairy tales of Charles Perrault (1628-1703), "that pleasant fountain-head of fairy tales,"¹⁷ and Countess d'Aulnoy (1650-1705). Written with the French Court in mind, *Cinderella*, *Valentine and Orson*, *Beauty and the Beast*, and others, as well as many folk-tales of

¹⁶ *New England Magazine*, n.s., v. 20, p. 147-60, April, 1899.

¹⁷ Andrew Lang *Books and bookmen*, 1892, p. 22.

English origin were published in the Chapbooks spoken of on page 240 and so became accessible to the children

John Newbery.—About the middle of the eighteenth century we come upon a striking figure in the history of children's literature, John Newbery, called by Goldsmith "the philanthropic bookseller of St. Paul's Churchyard, who has written so many little books for children."¹⁸ Goldsmith, himself, is known to have written a number of books for Newbery and while we cannot tell certainly which are to be attributed to him, most critics agree that the *History of Margery Two-Shoes* is Goldsmith's work. This was published in 1765 and may be called the first real children's story. The telling has the charm of humour and naturalness and it is still a favourite. Newbery published the first collection of *Mother Goose Rhymes* and Goldsmith is thought to have edited them. Dr. Johnson also wrote for Newbery and with the help of these two and other less distinguished contributors, Newbery published hundreds of little volumes. They were not all of the same rank as *Goody Two-Shoes*, but they were very popular and Newbery was so well known that we find allusions to him in the works of many writers. Leigh Hunt in *The Town*, writes of him with enthusiasm as one of his boyhood memories. "The most illustrious of all booksellers in our boyish days, not for the great names, nor for his dinners, nor for his riches that we know of, nor for any other full-grown celebrity, but for certain little penny books, radiant with gold and rich with bad pictures, was Mr. Newbery, the famous children's bookseller at the corner of St. Paul's Churchyard and Ludgate Street."¹⁹

¹⁸ There is a fuller description of him in the *Vicar of Wakefield*, chap. 18

¹⁹ Hunt. *The town*, 1889, p. 53.

Southey was presented, as soon as he could read, with a series of Newbery's six penny books for children: Goody Two-Shoes, Giles Gingerbread, and the rest, resplendent in flowered and Dutch gilt paper.²⁰ Miss Yonge speaks of *The Village School*, *Jemima Placid*, *Life and Perambulations of a Mouse*, and *Keeper's Travels*, as "the élite of the St. Paul's Churchyard literature." Of the third, Miss Yonge says: "We should like to know who was the author of the *Perambulations* for it certainly obtained the sort of lodgement in our minds that has generally been unconsciously taken possession of by works of real inherent talent."²¹ It is now known that this book, with *Jemima Placid* and many other little stories was written for Newbery by a lady named Dorothy Kilner.

Newbery's Advertisements.—Newbery was not only a bookseller but he dealt also in patent medicines, and his method of making one part of his stock in trade advertise the other, and in fact his whole system of advertising was nothing short of genius. Thus in *Goody Two Shoes*, little Margery's father was "seized with a violent fit of fever in a place where Dr. James's powder was not to be had and where he died miserably." Some of the notices of Newbery's books are ingenious enough to be quoted. In 1744: "According to Act of Parliament (neatly bound and gilt) a little pretty pocketbook intended for the instruction and amusement of little Master Tommy and pretty Miss Polly with an agreeable letter from Jack the Giant Killer, the use of which will infallibly make Tommy a good boy and Polly a good girl.

²⁰ Dowden. Southey (English men of letters ser.) p. 10.

²¹ Yonge. Children's literature of the last century. In *Living Age*, v. 102, p. 373-80, Aug. 7, 1869.

Price of this book alone Six Pence or with a ball and pincushion Eight Pence. To the whole is prefixed a letter on Education addressed to all parents, guardians, and governesses, etc., wherein rules are laid down for making children strong, healthy, virtuous, wise and happy" In 1755: "This day was published Nurse Truelove's New Year's Gift, the book of books for children, adorned with cuts and designed as a present for every little boy who would become a great man and ride upon a fine horse, and for every little girl who would become a great woman and ride in a lord-mayor's gilt coach Printed for the author who has ordered these books to be given gratis to all little boys and girls at the Bible and Sun in St Paul's Churchyard, they paying for the binding, which is only two pence each" And another "The Philosophers, Politicians, Necromancers and the learned in every faculty are desired to observe that on the first of January being New Year's day (oh, that we may all lead good lives!) Mr. Newbery intends to publish the following important volumes, bound and gilt, and hereby invites all his little friends who are good, or intend to be good, to call for them at the Bible and Sun in St. Paul's Churchyard, but those who are naughty to have none." Then follows a list of the books.²² Many of Newbery's books were reprinted in America, chiefly by Isaiah Thomas of Boston and Worcester (1749-1831) and the very advertisements were taken over, edited to suit an American public.

The Didactic Age.—The latter part of the eighteenth and early part of the nineteenth centuries may be called the didactic age in children's literature. The children's

²² See Welsh Early history of children's books in New England. In *New England Magazine*, n s v. 20, p. 147-60, April, 1899.

books written during this period were largely inspired by the impetus given to child-study by Rousseau, and, wooden as they seem now, marked an advance over the writers of the Janeway-Mather school, to whom the child was interesting only as a soul to be saved. Since Rousseau preached the development of the "natural man" as the purpose of education, the little heroes and heroines of the didactic writers were left to exercise their moral judgment and to abide by the consequences. Thus Rosamond, in Miss Edgeworth's story is allowed by her Spartan mamma to choose between the purple jar in the chemist's shop and the shoes she really needs, only to find that the beautiful color disappears when the fluid is poured out and that she is deprived of an anticipated outing with her father, because her old shoes are too shabby to be worn on the street. In all the stories of the period the virtuous infant infallibly prospers, the bad child comes to an appropriate downfall, thus pointing a somewhat dubious moral. But while we condemn this teaching as faulty and conducive to priggishness, we find admirable qualities in the best of these stories. They are natural, full of realistic detail, while the plots and incidents are well within the range of a child's experience.

THOMAS DAY.—In 1783 appeared one of the most famous books of this school, Sandford and Merton, by Thomas Day. This long tale of good little Harry and bad little Tommy and their very informative tutor, Mr. Barlow, seems dull enough to us, but no doubt was welcome to children of that day with their meagre supply of books. At least they could skip Mr. Barlow's homilies and read the History of Leonidas, King of Sparta, Sophron and Tegrane, Cyrus and the Coats or An-

drocles and the Lion. The extracts from Plutarch's Lives, Xenophon's *Cyropedia* and other works inserted by the author must have proved the most interesting part of the book.²³ Day was a warm friend of the Edgeworth family. He and Mr. Edgeworth were one in their admiration for Rousseau and in their opinions on the training of youth. In his writings for children Mr. Edgeworth attempted to work out his and Day's joint educational theories. The results would have been drier than they were had it not been for Mr. Edgeworth's daughter, Maria, "whose bright Irish wit," to quote Mrs. Field, "had a hankering after nonsense to make sense work well." Maria helped her father in the writing of *Practical Education* (1798), and *Harry and Lucy*, begun by him to encourage the teaching of natural science, was finally given to his daughter to finish. Her best known and most successful books for children are *The Parents' Assistant*, published in 1796, and *The Moral Tales*, published in 1801. The stories in these two works were first tried on Maria's brothers and sisters. As the next to the oldest of nineteen children (Mr. Edgeworth was married four times), Maria had considerable opportunity for testing her stories.

Opinions differ in regard to Miss Edgeworth as a writer for children. Sir Walter Scott was a warm admirer of her stories. Ruskin, though he objected to her system of material rewards and punishment, as likely to be misleading as an interpretation of life, says of her: "I can read her over and over again, without ever tiring; there's no one whose every page is so full and so de-

²³ Day's experiment of bringing up two orphan girls, with the purpose of taking for his wife the one who best profited by his educational theories, is more interesting than his books. See *Dictionary of National Biography*.

lightful; no one who brings you into the company of pleasanter or wiser people; no one who tells you more truly how to do right.”²⁴ Charlotte Yonge declares that the minor morals of life have never been better treated.²⁵ Lady Ritchie, Thackeray’s daughter, tells how her father read the *Little Merchants* aloud to her, and how the characters in *The Parents’ Assistant* became her daily, familiar companions from that day forth.²⁶ Agnes Repplier compares “foolish, warm-hearted, impetuous little Rosamond” and her purple jar with Miss Alcott’s *Rose* in *Eight Cousins*, not altogether to the advantage of the latter,²⁷ while Mr. E. V. Lucas in the preface to his *Old Fashioned Tales*, calls *The Basket Woman* one of the best stories for children that has been written. Edward Salmon, writing in the *Nineteenth Century* in 1887 voices the extreme opinion of the other side when he declares that there is “no pathos, no humour, little true sympathy in her children’s stories.”²⁸

MRS. BARBAULD.—Another well-known writer of the didactic school was Mrs Barbauld (1743–1825), who wrote *Early Lessons for Children*, *Hymns in Prose for Children*, and others. She is best known, however, by *Evenings at Home*, written in collaboration with her brother, Dr. Aiken. Of this Miss Yonge says, “Every chapter conveyed some clearly defined bit of instruction.”²⁹

MRS. SARAH KIRBY TRIMMER (1741–1810), who has been called the parent of the didactic age in England,

²⁴ Ethics of the dust.

²⁵ Children’s literature of the last century *Liv Age*, v 102, p 613

²⁶ Preface to *The parents’ assistant* Macmillan. 1903

²⁷ Repplier. What children read *Atl M* v. 59, p 23–32, Jan., 1887.

²⁸ *Liv. Age.* v 175, p 323.

²⁹ *Ibid*, v. 102, p. 376.

wrote a long list of books for children. Influenced by Rousseau and his disciple, Mme. de Genlis, on the one hand, she was also closely identified with the movement for teaching the poor children by means of the Sunday Schools. The Sunday School Movement was started by Robert Raikes (1735-1811). His first Sunday School was opened in 1780; in 1786, largely through Mrs. Trimmer's efforts, one was opened at Brentford, her home. Henceforth her writings consisted chiefly of books for use in the Sunday Schools. But it is not for her *Easy Introduction to the Knowledge of Nature* (1782) nor for her religious writings that Mrs. Trimmer is best remembered, but for her *Story of the Robins*, originally known as *Fabulous Histories* (1789). This book is still reprinted. It is interesting as one of the first attempts to instil in children a spirit of kindness toward animals.

Verse Writers.—If Miss Edgeworth, Mrs. Trimmer and the rest were teaching moral and religious lessons in prose, the writers of verse were no whit behind them. Jane and Ann Taylor in their *Original Poems for Infant Minds*, published in 1804, sought to emphasize lessons of truthfulness, generosity, honesty, and neatness. Many of the verses of the Taylor sisters have real merit, and children still enjoy the accounts of meddlesome Matty, heedless Eliza, Lucy, the Chatterbox, and others, and the dire retribution which befell them. Mrs. Elizabeth Turner, author of the *Daisy: or, Cautionary Stories in Verse, Adapted to the Ideas of Children from Four to Eight Years Old*, and the companion volume, *The Cowslip*, is not so well known as the Taylors; on the whole, her verse has less of the poetic quality, but her portraits of old-fashioned boys and girls are quaint and pleasing. For example:

"Miss Lucy was a charming child,
 Who never said I won't
 When little Dick her playthings spoiled
 She said, 'Pray, Dicky, don't!'

He took her waxen doll one day
 And banged it round and round;
 Then tore its legs and arms away
 And threw them on the ground

His good Mamma was angry quite,
 And Lucy's tears ran down
 But Dick went supperless that night
 And since has better grown."³⁰

BLAKE'S SONGS OF INNOCENCE.—Since the poetry written for children at this period might be characterized by the following verse taken from *The Child's Keepsake*, published in Boston in 1854:

"My dear little readers the moment you look
 At the pictures and poems contained in this book
 You'll see 'tis a volume intended for you
 To guide your young hearts to the good and the true"³¹

it is with almost a shock of astonishment that we come upon Blake's *Songs of Innocence* (1787). With its wonderful imagery and poetic quality it seems strangely out of place amid the conventional, didactic writing of the period.

Religious Books and Sunday School Stories.—The didactic school, with its moral, educational and religious tendencies, persisted well into the nineteenth century. Mrs. Sherwood, author of the *Fairchild Family*, *Little Henry and His Bearer*, *The Child's Pilgrim's Progress*, and other stories, in England; and in America,¹ Elizabeth

³¹ Quoted by a writer in the *Nation*, v. 37, p. 307-8, Oct 1, 1908

Wetherell (Susan Warner) with her *Wide Wide World*, and *Queechy*, are followers of the third line. The Wetherell books, though religiously sentimental in the extreme, have a certain turn for the description of everyday things which places them above the mass of religious stories and "Sunday School books" written in America during the nineteenth century. Miss Yonge draws a distinction between the "religious tale, over-loaded with controversy and with a forced moral," and "the tale constructed on a strong basis of religious principle, which attempts to give a picture of life as it really is seen by Christian eyes." To the former group belong the *Elsie* books, the *Pansy* books, and other similar series; while Miss Yonge's own stories are happy examples of the second kind.

Descendants of the Moral and Educational Writers.—Mrs. Marcet with her "*Conversations*" on Chemistry, on Political Economy, Natural History, etc., and Mrs. Gatty (*Parables of Nature*), were descendants of Aiken and Barbauld, the Edgeworths, and Thomas Day. Peter Parley, a pseudonym of Samuel Goodrich, the first well-known writer for children in America, wrote a long series of instructive books. These were so well received that according to Mr. Lucas, an "outbreak of Peter Parlishness began to be general among juvenile firms in England," for at least six other writers adopted the pseudonym.³² Jacob Abbott, writing about 1850, was the author of many historical biographies for young people. Some of these were written with his brother, J. S. C. Abbott. He also wrote the *Rollo* books, *Jonas* books, *Lucy* books, and the *Franconia* stories, making in all some two hundred volumes. Many of the biographies

³² Preface to *Old fashioned tales*.

are interesting and still liked by children, but on the whole Abbott is not read nowadays. His very informing Rollo books are little more than a name and it is doubtful if even the Franconia stories are found in many children's libraries. Perhaps, as has been said, "the life of the modern American child is too fast moving for much sympathy with these pictures of quiet, wholesome life."³³ But it seems a pity that these stories should be allowed to slip entirely into oblivion. The author understands a child's interests and the atmosphere is full of the feeling of out-of-doors and of pleasant country life; it is, moreover, characteristically American.

THE FAIRCHILD FAMILY.—Mrs. Sherwood has already been mentioned, but her chief work, *The Fairchild Family*, needs a word of description. Its full title reads, "The History of the Fairchild Family; or, The Child's Manual. Being a collection of stories calculated to show the importance and effects of a religious education," by Martha Sherwood. The first part appeared in 1818, the second and third parts many years later. A writer in *Good Words*, in 1904,³⁴ describes the book as follows: "Read in her own day for her religious teaching she is read to-day in spite of it. . . . Mrs. Sherwood in her interesting autobiography tells us that the book was written after she had found peace and light in the 'doctrine of the total depravity of the human heart!' Indeed, this doctrine pervades like sunshine the whole of the *Fairchild Family*. Mr. and Mrs. Fairchild and even the serious man-servant Job, welcome alike childish peccadilloes and serious faults of character with the

³³ Caroline Burnite. *Beginnings of children's literature* Library Journal, v. 31, p. 107-12. Conference number, 1906

³⁴ Florence Maccunn. *Liv. Age*, v. 241, p. 746-53, June 18, 1904.

cheerful alertness of specialists who recognize their pet discovery in all the diseases brought to their notice. The book begins with a sort of solemn round game, each child in turn repeating texts 'about mankind having wicked hearts.' 'This,' sums up the Papa, 'is the dreadful state into which Adam fell; he made us children of wrath and heirs of Hell.' This is sufficiently appalling as the text of the book, but with Mrs. Sherwood, as with Dr. Johnson's friend, Mr. Edwardes, 'natural cheerfulness is always breaking in.' The book is crowded with episodes; and the entertaining story and crude religious teaching are so loosely compacted that, on the same page with one of Mr. Fairchild's lurid harangues the eye is pleasantly arrested by some such substantive as 'honeysuckle,' 'custard,' 'green-satin slip' No one would have been more surprised, more mortified, more truly grieved than Mrs. Sherwood, if she could have foreseen that the day would come when her religious teaching would have been seriously disapproved of. Nor would it have consoled her to know that her story would survive by reason of its style and its simple idyllic charm. Children even more than grown-ups are fascinated by style. It is less the story itself than the manner of telling that gains their affection. Long after the incidents of the Fairchild family have faded from memory the impression remains of certain little 'Heavens below' where dear old ladies sit in bow windows and smile themselves into acquaintance with little girls going hand in hand to school 'in light green stuff frocks with lawn tippets and aprons, and very tight neat silk bonnets.' There is also a cheerful kitchen where an exactly similar old lady welcomes a starved and bullied little school boy into warmth and abundance, and her charming old servant lets him make the toast.

Even more delightful than the comfort and kindness of these interiors, are the descriptions of lanes and woods and hayfields. It is well to be sparing in describing natural beauty in a child's story. Reading the other day in a recent and popular child's story about 'meadows starred with daffodils' and 'white clouds sailing high in the noon blue of a summer sky,' one felt how such stuff lent itself to skipping. But Mrs. Sherwood's ar-
bours and hayfields are an integral part of the story. She sees the world as the child sees it, a place to play in, 'a world three feet high.' 'There is not a pleasanter lane in any village in England; the hedge on each side was of hawthorne, which was then in blossom, and the grass was soft under the feet as a velvet cushion, and on the bank under the hedge were all manner of sweet flowers, violets, primroses, and veronica.' What a place to play in, with that heaven of white blossom overhead."

The Child in the Nineteenth Century.—In the years preceding the nineteenth century, and during a part of the nineteenth century, childhood was looked upon merely as a necessary but trying period of preparation for manhood, during which the chief duty of children was to be seen and not heard, learning assiduously, meanwhile, the various necessary lessons, in books, in manners, in religion, until with the advent of adult years they might aspire to the dignity of personality and individuality. In the nineteenth century people began to be interested in children for their own sake, not only as prospective men and women, and nowhere is the change of attitude more noticeable than in the field of literature. Hitherto the child had been assigned the rôle of the miserable little sinner, who must be brought to a sense of sin and salvation; or of the self-satisfied little prig, the product of a

System. Now Wordsworth shows him to us, trailing clouds of glory, and the poets—Coventry Patmore, Hartley Coleridge, and others—as well as Wordsworth, found in childhood a source of inspiration.

IMAGINATIVE LITERATURE.—When the value of cultivating a child's imagination was recognized, children's literature began at once to profit by the general reawakening of interest in imaginative literature which marked the nineteenth century. Its field was broadened and its quality improved. The fairy tale came into its own and translations of Grimm's *Popular Stories* and Andersen's *Fairy Tales* took their places as classics of the nursery.

MYTHOLOGY.—The first attempt at opening the great wonder room of Greek mythology was made early in the latter half of the century by Kingsley with his *Greek Heroes*, and by Hawthorne with his *Wonder Book* and *Tanglewood Tales*. Hawthorne's retelling of the myths has been called romantic and realistic compared with Kingsley's more classic atmosphere. Children, however, will not stop to consider schools, but will revel in them both, and no child should escape making the acquaintance of either one.³⁵

NONSENSE STORIES AND RHYMES.—Hawthorne and Kingsley gave children the key to the treasure house of Greek mythology; Lewis Carroll in 1865 put them in possession of that even dearer kingdom of Nonsense with his "immortal Alice." How strange, and indeed, how sad to think of growing up without knowing Alice, the White Rabbit, the Red Queen, and all the rest of the delightful dwellers in *Wonderland* and *Through the*

³⁵ See Hawthorne's own defence of the "Gothic" treatment of the myths in "The tanglewood fireside," following "The three golden apples," *Wonderbook*. Houghton. 1910. p. 137-38.

Looking Glass. Nonsense verses (can we imagine the little Fairchilds relaxing on aught but Scripture texts?) are represented by Dame Wiggins of Lea and Her Seven Wonderful Cats, which was edited later with additional verses by John Ruskin. Mother Goose was reprinted on both sides of the Atlantic.

HISTORICAL TALES — Sir Walter Scott's *Tales of a Grandfather*, that successful attempt to make history vivid and interesting to child readers, shows us how far we have come from the early, dry-as-dust efforts to present facts and dates.³⁶ Dickens's *Child's History of England*, Charlotte Yonge's *Book of Golden Deeds*, and other historical works for young people illustrate the new emphasis placed on the romantic and heroic side of history. No longer was it considered a little undignified and trivial to be caught writing children's books, and pseudonyms largely disappeared when some of the greatest writers of the day did not feel that they were stooping in putting their pens to work for children.

ADULT BOOKS APPROPRIATED BY THE CHILDREN.— Long before the nineteenth century certain "classics" had been written, not at all with children in mind. But they were speedily appropriated by youthful readers and have belonged ever since primarily, one is tempted to say, to the children's shelves; at any rate, no other class of readers takes the same unadulterated pleasure in them that the children take. These books were *The Pilgrim's Progress*, *Robinson Crusoe*, *Gulliver's Travels*, and

³⁶ Scott's comment on writing for children is significant. "I am persuaded children hate books which are written down to their capacity, and love those which are composed more for their elders. I will make, if possible, a book that a child shall understand, yet a man will feel some temptation to peruse should he chance to take it up." Lockhart's *Life of Scott*. 1901. v 5, p. 82-3.

Baron Munchausen. Add to these the Arabian Nights, Æsop's Fables, and De La Motte Fouqué's Undine and Sintram, and you have an excellent juvenile library which delighted the boyhood of many a well-known man. Their value as juvenile books was recognized in the nineteenth century when they were republished in editions accessible to children.

CLASSICS RETOLD FOR CHILDREN.—In the early years of the century, three books appeared which seem twenty-five or thirty years before their time. These were *The Tales from Shakespeare*, and *Mrs. Leicester's School* by Charles and Mary Lamb, and *The Adventures of Ulysses* by Charles Lamb alone. These were the first books written for children, with the exception of Blake's *Songs of Innocence*, in which the author attempted, not to point a moral nor to instruct, but to present real literature in a way to appeal to children. *Mrs. Leicester's School* is interesting to adults as well because of its truthful studies of child-nature, but the *Tales from Shakespeare*, and the *Adventures of Ulysses* are even more important as the first attempt to retell the classics for children. They stand at the beginning of a long list of successful attempts by many different writers, and after many years still hold their own.

HARRIET MARTINEAU.—In *Miss Martineau's Feats on the Fjord* (1841) we have one of the first combinations of an accurate description of life in a foreign country and an excellent story. Her *Crofton Boys* (1841) shows the advance in characterization in juvenile books. Miss Martineau's delineation of boy nature is so true that the book is still as readable as it was half a century ago. This book and *Tom Brown at Rugby* were the forerunners of the modern school story.

RELIGIOUS POETRY.—A new and more tender religious teaching is found in Keble's *Lyra Innocentiarum*, *Thoughts in Verse for Christian Children, Their Ways and Privileges* (1846), and in Mrs. Alexander's *Hymns for Little Children* (1848).

THE ADVENTURE STORY.—Another kind of writing for children which first appeared in the nineteenth century, is the adventure story. James Fenimore Cooper's *Natty Bumppo*, *Chingachgook*, and *Uncas in the Leather Stocking Tales* were the first of a long line of scouts and Indians. Cooper's sea stories, too, served as models, and furnished inspiration. Captain Marryat, Mayne Reid, Ballantyne, and many others wrote thrilling tales of adventure on sea and land. Their stories were exceedingly popular; some of them are still favorites and we recognize their direct descendants in many of the present day books for boys.

THE REALISTIC STORY.—In the nineteenth century the realistic story, what Mrs. Field calls "the novel of childhood in which no effort is spared to make children appear as they are," was developed. The books of Mrs. Ewing and Charlotte Yonge in England, and of Louisa Alcott in America are its best examples. Mrs. Ewing's delightful books³⁷ are too little known in America. This is partly due, no doubt, to the fact that the setting of her stories is so thoroughly English and partly to the fact that she is too literary to appeal to the child who does not read easily or has read chiefly the mediocre. It would be worth while, through attractive editions, and perhaps through reading aloud and story-telling, to make

³⁷ *Lob-lie-by-the-fire*; *Jackanapes*, *Story of a short life*, *Daddy Darwin's dovecot*, *Flat-iron for a farthing*, *Jan of the windmill*, and others

children acquainted with the high ideals and refinement of Mrs. Ewing's books.

Charlotte Yonge's stories have a strong religious element but it is neither mawkish nor combative, and the ideals of family life and individual conduct are high and noble. Miss Yonge's description of what she thought a religious tale should be may well be applied to her own books, "drawing out the poetry of all that is good, enlisting the sympathy on behalf of purity, faith and forgiveness, and making vice hateful and despicable."³⁸ "Jo," in *Little Women*, has been called the lineal descendant of the "harum-scarum, impulsive, quick tempered but thoroughly lovable 'Ethel' of Miss Yonge's *Daisy Chain*." Miss Maccunn, in the article already quoted, makes the same suggestion. Her comparison of the two characters is interesting and it is pleasant to hear from across the Atlantic this hearty tribute to our American writer. "But her (Miss Yonge's) large families with their good principles, culture, family affection, small means and genuine Anglican piety, how good they are and how intimate one feels with them Ethel in the *Daisy Chain* was everybody's favorite character in fiction until there appeared from across the Atlantic a similar character but infinitely richer, funnier, more sympathetic, more universally human, the beloved 'Jo' of *Little Women*. This book is passing through new editions every day, and if by a miracle they were all swallowed up, women and children of all ages and all degrees of culture would unite to reproduce the book from memory. It is level with the intelligence of all of us, it deals with things we are all interested in, food, clothes, left-overs,

³⁸ Yonge. *Children's literature of the last century* Liv. Age, v 102, p 618

making both ends meet, having 'good times,' doing one's duty when one would rather not, and it deals with them with a 'go,' a sense of pleasure that is little short of genius."³⁹

Modern Developments.—The field of children's literature to-day is characterized by great activity. We find most of the varieties of children's books which originated in the nineteenth century still flourishing. The purely religious story is the only type that has vanished. No one has yet written another *Little Women* nor a *Tom Brown at Rugby*, but the home and school story have some excellent representatives. The large output of adventure stories and historical stories for boys is perhaps more generally mediocre, and from these it is but an easy step downward to the "series books," interminable series of cheap juveniles, worthless in style, wooden in characterization, and misleading in their picture of life.⁴⁰ We have the historical story and the travel story; books descriptive of foreign countries have had great popularity during the last decade. Fairy tales retain their popularity, beautiful editions of the old classic collections are published, authors are constantly adding to the list of modern fairy stories and editing new collections of folk-tales for children. There is a marked tendency not only to retell the classics but to simplify and dilute former successful adaptations.⁴¹ Much real poetry has been written for children. In the earlier group of names we

³⁹ Children's story-books. *Liv Age*, v. 241, p. 746-53, June 18, 1904.

⁴⁰ The Library Commission of the Boy Scouts of America is doing good service by its book lists and the inexpensive reprints of better books, issued by Grosset and Dunlap in "Every boy's library," to supplant the poorest of these series.

⁴¹ Even the classics of infancy have not escaped, *Mother Goose* has been re-edited for American children, and *Alice in Wonderland*, *Swiss family Robinson* and the *Wonder book* have been simplified.

find Christina Rossetti, Mary Howitt, Lucy Larcom, Celia Thaxter, Alice and Phœbe Cary. Whittier's *Child Life* is a delightful anthology representing most of these writers. A number of very charming books of verse for children have been recently written with Stevenson's *Child's Garden of Verses* as forerunner and inspiration.⁴²

As the pendulum swung far away from the severely instructive book for children it reached the Comic Supplement and the book modeled thereon. There are hopeful indications, however, that the days of this type of children's literature are numbered.

In this Day of the Child, when education, reading and even play are so carefully supervised and made easy, it is well to remember that there is much in adult literature which, after all, children should know as children. "In wise households the big, beautiful, interesting, grown-up books are kept on low study shelves, or on broad flat window seats where a child with the irrepressible instinct for reading may find them for himself. In a lovely passage Cowley describes 'the little chance which filled his heart with such chimes of verse as have never since left ringing there. For, I remember, when I began to read and to take some pleasure in it, when there was wont to lie on my mother's parlor (I know not by what accident, for she herself never in her life read a book 'but of devotion,' but there was wont to lie) Spenser's works; this I happened to fall upon, and was infinitely delighted with the stories of knights and giants and monsters and brave houses that I found there.'"⁴³

⁴² For example: Josephine Preston Peabody's *Singing leaves*; A. F. Brown's *Pocketful of posies*, and Betty Sage's *Rhymes of real children*.

⁴³ Quoted by Maccunn. *Children's story-books*. *Liv. Age*, v 241, p. 753.

EXERCISE.

1. Read a story by Maria Edgeworth, one by Thomas Day, and one by Peter Parley. (Stories by these authors may be found in the collections mentioned below.) In general, how do these seem to differ from such stories for children as *Under the Lilacs* (Alcott), *Heidi* (Spyri), *The Birds' Christmas Carol* (Wiggin)?

2. Look over Catherine Sinclair's *Holiday House* (1839); Mrs. Sherwood's *Fairchild Family* (1818), and Harriet Martineau's *Feats on the Fjord* (1841). Which would you select to put in a present day library for children, and why?

3. Read Malleville's *Night of Adventure* by Jacob Abbot in Lucas, *Forgotten Tales of Long Ago*, also *Embellishment* by Abbot in Lucas, *Old Fashioned Tales*. Give your opinion of these stories. Do you think children would like them? If possible read them to a child and note results.

4. Compare *Tom Brown at Rugby* (Hughes, 1857) with one of Ralph Henry Barbour's school stories. From your experience, what can you say of the popularity of *Tom Brown* with the present generation of children?

5. Read Mrs. Ewing's *Jackanapes*. Do you think children would like it? Did you like it as a child? What is its value for children?

6. Read Miss Edgeworth's *Waste Not, Want Not* in *The Parents' Assistant* (also in *Forgotten Tales of Long*

Ago, and Scudder's *Children's Book*). Does this seem to you a good child's story as regards (1) moral lesson, (2) interest? Do you find it popular with children?

7. Read *Eyes and No Eyes* in Aiken and Barbauld's *Evenings at Home*. (Also in Scudder's *Children's Book*.) How would you compare it with the present day nature readers and stories for children? Do you think children would find it interesting?

8. Read the account of the battle of Culloden and the escape of Charles Edward in Scott's *Tales of a Grandfather*. Do you think boys and girls of the seventh and eighth grades would enjoy it if read or told to them? Why? If possible, try the experiment.

9. Did you as a child enjoy Charlotte Yonge's stories of home life—*The Daisy Chain*, *Pillars of the Household*, *Countess Kate*, etc.? Have you found them, as a rule, popular with children? Why do you think girls do or do not like them?

10. Read *The Young Mahometan* in Mrs. Leicester's *School* by Charles and Mary Lamb. How would you compare this with the stories which you have read by Miss Edgeworth and Thomas Day?

11. Examine the edition of Mrs. Sherwood's *The Fairchild Family*, edited by M. E. Palgrave and illustrated by M. F. Rudland (Stokes); or, Miss Edgeworth's *The Parents' Assistant*, illustrated by Chris Hammond (Macmillan, 1903). Do you think the modern form of the book likely to revive interest in the story?

Chapter XVI

THE PRESENT PROBLEM OF CHILDREN'S READING

Chapter XV attempted a brief survey of the history of children's literature. This chapter deals with the present day problem of children's reading.

Importance.—Not infrequently we find people who shrug their shoulders and smile a little at the advocates of a careful consideration of this matter. No doubt most teachers have met the mother who, questioned as to what her children are reading at home, replies: "My children seldom read anything, they have enough to do to keep up with their school work." She is a fortunate mother if her children suffer only a negative ill and are not, for the want of the proper food for their imaginations, driven to the vulgar and the sensational, in the shape of the cheap show, the wrong kind of moving pictures, and the trashy book.

What the Problem Consists Of.—You cannot, of course, drag a boy away from a nickel show and thrust the *Jungle Book* into his hands with, "read that, it is much better for you." The best way to make a child love good books is to set his father and mother to reading them and loving them, when they, too, are boys and girls. Oliver Wendell Holmes's oft quoted saying to the effect that the child who has never tumbled about in a library is always afraid of books, comes frequently to

mind in dealing with the young person of to-day. The good doctor might have said not only afraid of books but contemptuous of them, with the contempt born of ignorance. We must face the fact that unfortunately in many hundreds of American homes there are no libraries for children to tumble about in; and that a corresponding familiarity in early years with the recent novels borrowed from the Public Library, several monthly and weekly magazines and the daily papers, is by no means conducive to a corresponding amount of culture. The problem is how to deal with the non-reading child, who comes of non-reading parents from a bookless home.

The Teacher's Opportunity.—Librarians are doing what they can in the Children's Room with carefully selected books, assistants trained in library work with children, story hours, and co-operation with school libraries. Teachers may do even more. In their longer and closer companionship with children they have opportunities, second only to those of the parent, of putting a child in touch with books which may influence his whole after life. Teachers, too, in their daily association with children, are continually reminded of their successive interests.

Danger in Becoming Too Theoretical.—To be sure, we cannot make a neat, little, theoretical time-table of a child's development and expect every change to take place according to schedule. We must be ever ready to adapt general rules to individual children; to differences caused by inheritance and environment. The following are the words of a teacher in a preparatory school for boys in England. Librarian, as he uses the term, refers to the teacher in charge of the school library. "The ideal librarian must have that true wisdom—the product of

experience and sympathy—which recognizes that boys must be led on very gradually, and that to recommend books of a better class too early is apt to discourage a taste for reading altogether. One librarian of long standing has told me that he is only just beginning to learn after many years of this work what can really be done towards helping boys to make a true progress in the choice of books. He points out to us that it is of no value to say that a boy of a certain age should read and enjoy a certain book, and the comparison must not be made between one boy and others of his age, but between a boy as he is and as he was at earlier stages in his life.”¹

Characteristic Interests.—Writers on child psychology, parents and teachers agree that the little child from three to six enjoys rhythm and repetition, imaginative and dramatic forms of activity and plays involving imitation. Children’s tastes in the first books that they like to read and have read to them clearly coincide with these interests for their favorites are Mother Goose, poetry with a strongly marked rhythm, such as the Child’s Garden of Verses, and stories with a dramatic, actable quality, such as is preeminently supplied by the fairy tale. In the fairy tale nothing is impossible, seven league boots, bean stalks as tall as the sky, fiery dragons and magic swords with which to kill them; the power to do whatsoever he will—all these are possessed by the child as he identifies himself with the hero, thus giving him, indeed, “the freedom and pleasure denied him in a world of fact.” The more gifted children only may invent stories for themselves, as did George Meredith, “in the manner of St. George and the Dragon or of the kind found in the

¹ Preparatory school libraries by W. Douglas See Great Britain. Education Department Special Reports, v. 6

Arabian Nights";² but all children may enter the magic kingdom through the gate of the old familiar fairy tale.

DRAMATIC INTEREST.—The actable quality of a story or poem is a sure test of its popularity. Quite little children enjoy the Pied Piper and are found acting out the story. Stevenson is speaking of this characteristic of children where in his *Essay on Child Play* he says: "He (the child) works all with lay figures and stage properties. When his story comes to the fighting, he must rise, get something by way of a sword and have a set to with a piece of furniture until he is out of breath. When he comes to the ride with the king's pardon he must bestride a chair. . . . If his romance involves an accident upon a cliff, he must clamber in person upon a chest of drawers."

ANIMAL STORIES.—Closely allied with the fairy tale is the imaginative animal story—the *Jungle Books*, Seton-Thompson's stories. But to make an appeal to this age, animal stories must be of the kind which present animal life in the forest and in the jungle so that the child can picture it and can play at living it. The book of information belongs to a later period.

EIGHT TO TWELVE:—When the child is about eight years old, we begin to hear the question asked, "Is it true?" Not that the answer in the negative detracts from the popularity of the story; older brothers and sisters are, if you notice, quite as eager to hear the fairy tale, which you may be telling, as the little ones themselves. But they wish to enjoy it as make believe, not as something which was or may be true. An interest in persons and the relations of individuals to life is developing, as is shown by the liking for the hero story which

² Meredith. *Letters*, v. 1, p. 3.

appears at this time, for the history story where the emphasis is laid on individuals, the book of deeds, Robin Hood, King Arthur, or, with the less imaginative child, the stories of Stoddard, Kirk Monroe and Altsheler.

It is not true that the child in turning from the fairy tale and wonder story to the realistic story is looking for accounts of the happenings of daily life. On the contrary, the more unlike every-day doings the feats performed by the hero, the more unheard of and stupendous the experiences he undergoes, the better the story pleases, provided, always, that it *seems* possible and believable. A writer in the *Edinburgh Review* in 1902 puts it excellently when he says: "When Grimm, Andersen, and all the fairy classics of the first ages of youth—the jewel age which antedates the golden, and to which we far more easily in later years return—are drifting into the unacceptable region of the unbelieved, realism, in its first claims, demands of fiction that it should present not maybe yet the actual, but the credible, the possible. It is then that the book of adventure has its reign. Worlds unrealized, unexplored seas, undiscovered countries, must figure in the tale, but worlds that may be thought to exist, countries with shores of solid rock, with bays and creeks and harbors—seas real ships might sail. And fiction must picture them plain with compass and map, longitude and latitude, and the full similitude of veracity."³ *Treasure Island* should have its map as well as its illustrations. Other books which satisfy this demand are *Robinson Crusoe*, the *Swiss Family Robinson*, *Munchausen*, *Gulliver's Travels*, and the scientific romances of Jules Verne.

³ Schoolroom classics in fiction—a survey *Littell's Living Age*, v 232, p. 385-401.

The greater interest in the details of life outside a child's own circle is satisfied by the stories of industries and books descriptive of foreign countries. The Little Cousin Books and other geographical series are popular at this age.

This age is more or less a time of competition and rivalry with other children. Most of a small boy's fighting is done at this time and books which describe all kinds of encounters from tournaments to Indian ambushes make a strong appeal. Now is the time to form ideals of true courage through such books as Pyle's Robin Hood and Men of Iron, Ivanhoe, Sewall's Little Jarvis and Decatur and Somers.

Adolescence.—With this period (from twelve or fourteen to sixteen or eighteen years) come marked changes. A child's feelings about himself, about his surroundings, are more intense than ever before. Poetry which expresses the feelings, stories which deal with love and romance, books which appeal to a child's religious nature and to his instincts for self-sacrifice are eagerly read.

We are told, with the period of adolescence, "the child for the first time enters fully into his social inheritance," and "that the key to the adolescent is his interest in living up to what he conceives to be the social demands upon him."⁴ Hazlitt, in his essay, "On the Reading of Old Books," describes this social awakening in his own case. "Tom Jones," he says, "was the first work to break the spell." (That is, the spell of the time when he was "a little thoughtless child and had no other wish but to con his daily tasks and be happy.") Then "Tom Jones" came in his way. "It came down in numbers once a fortnight, in Cooke's pocket edition, em-

⁴ Tauner, *The child* p. 245-6.

bellished with cuts. . . . It smacked of the world I lived in and showed me groups of 'gay creatures,' not of 'the clement,' but of the earth; not 'living in the clouds,' but travelling the same road that I did;—some that had passed on before me, and others that might soon overtake me.”⁵

Ideals Furnished by Literature.—Since his relationship to the world around him has consciously become a problem to the adolescent, books which will show him how others have attacked this problem are welcome. “Little can be done by parent and teacher in a positive or specific way toward determining just what the imaginative activity shall be during this period. Indirectly much may be done by furnishing literature that stimulates and provides abundant opportunity for the choice of ideals.”⁶

Now is the time for instance to present by means of such novels as *The Tale of Two Cities*, *Hypatia*, *Ivanhoe*, *Lorna Doone*, fine and ennobling ideals of love and marriage, such as the child, perhaps, does not find in his own environment.

Wide Reading Not in Itself Harmful.—Wide reading on the part of the adolescent boy and girl need not alarm us, if only really good literature is placed in their way. It is the trashy novel, the cheap and commonplace product of modern writers, which encourages the wrong kind of moral outlook; not the books of the great writers of the past.

The Right Book at the Right Time.—This brief outline of a child's successive interests in literature has been given to emphasize the fact that in the guidance of

⁵ Hazlitt Collected works, v 7, p. 222-3

⁶ Kirkpatrick The individual in the making, p 238

a child's reading, as in everything else, there is a psychological moment, and it is, therefore, the business of the teacher who wishes to influence the forming of a child's taste in books, to be on the watch for the opportunity to present the right book at the right time. When a boy is longing for fighting and Indians, and adventure in the most stirring form, of what use will it be to press upon him the finest, most spiritual of stories, the most imaginative fairy tale or allegory? It may rather do positive harm in causing him to lose faith altogether in our recommendations of books and he will satisfy his desire for excitement and a hero to imitate with the sensational stuff he will get, not from the school or the public library, but from some less reputable source.

Danger of Cheap Juveniles.—Judge Lindsey once said, "I recall a group of boys in my court room. In the trunk of one of them in an attic were found hundreds of cheap juveniles, and I think they had much to do with the misdirected energy and spirit of adventure in these boys, which, instead of taking the wholesome channels, took really to serious crime. The coarse, cheap appeal of some of this literature is certainly dangerous."⁷ We have Josiah Flynt's testimony in *Tramping with Tramps* in the chapter called "Children of the Road," which every teacher should read, that it is the literature of "desperadoism thrust upon them from the shop-windows through the picture-covered dime novels and the flaring faces of the *Police Gazette*, that by suggestion starts many an honest but romantic boy off to the road."

Danger of the Mediocre.—Less easy to detect but

⁷ Quoted by Edward W. Mumford in a paper read before the American Booksellers' Association, May 15, 1912.

more widespread is the danger of the mediocre in literature. Quantities of juvenile books are turned out every day which, wholesome enough morally, are entirely commonplace in tone and altogether lacking in qualities of style and distinction. Moreover, whether a child reads books or not, and more probably if he does not, he is almost certain to read the daily papers. As Stevenson says: "The sneering, the selfish and the cowardly" (to which list we may well add the vulgar), "are scattered in broad sheets on every table, while the antidote in small volumes lies unread upon the shelf."⁸ One part of the paper, at least, is looked upon as the particular property of even the youngest children—the Comic Supplement. Hundreds of fathers and mothers in refined homes hand over these supplements without question to the children, because the children ask for them, not realizing that every issue tends to blunt a little the sensibilities for art and beauty, dulls the sense of humour and encourages the lack of respect for authority, characteristic of the young American.

The Remedy.—The chief safeguard of children's reading must be in the home atmosphere, in the companionship of parents and children in the field of books. As an editorial in the *Outlook* said some years ago, "Children ought to form the reading habit, as they form the habit of being courteous, because it is the normal habit of the home and they ought to read good books, because no books which are not good books ought to be within their reach."⁹ In the forming of a child's taste in literature, next to the parents, teachers have the greatest opportunity and the greatest responsibility.

EXERCISE.

1. Name three books which you know by experience appeal to children between nine and twelve. Suggest reasons why they do appeal.
2. Name two stories which you think especially suitable to be told to children before they are old enough to read. Why do you think so?
3. Suggest three novels which you would include in a high school library. Give reasons.
4. Name a poem other than the Pied Piper which little children enjoy because of its actable quality.
5. Outline the successive tastes in reading of some

child whom you know, stating whether you found abrupt changes of interests, or whether early likings continued at the same time that new tastes developed. Does this seem to you an average or an exceptional case?

6. Name several writers for adults with whose books you think children should be familiar in the home. Why?

7. Suggest ways in which the teacher and the parent may co-operate in encouraging children to read good literature.

8. How important does it seem to you that a child should have the right book at the right time? Can you recall any instance when the wrong book has done positive harm?

9. Have you found much difference in the reading done by boys and girls? If you have found divergence in taste, describe it, in general, and state at what age it seems to appear.

10. Mention ways in which mediocre books do harm. What has been your experience in regard to children who have read chiefly mediocre books?

Chapter XVII

FAIRY TALES

Once upon a time, in the days when all well brought up Puritan infants were learning their catechisms and reading Fox's Book of Martyrs by way of diversion, fairy tales were considered not only useless but actually pernicious. In the eighteenth century Rousseau protested against all fairy lore. "Fables may instruct men," he wrote in *Émile*, "but children must be told the bare truth, for the moment we cover truth with a veil they no longer give themselves the trouble to lift it." His protest seems to have had some influence when we recall the didactic literature of the eighteenth and early nineteenth centuries, and find Lamb writing to Coleridge as follows: "Mrs. Barbauld's stuff has banished all the old classics of the nursery; and the Shopman at Newbery's hardly deigned to reach them off an old exploded corner of a shelf when Mary asked for them. Mrs. B——'s and Mrs. Trimmer's nonsense lay in piles about Knowledge insignificant and vapid as Mrs. B——'s books convey, it seems, must come to a child in the shape of knowledge, and his empty noddle must be turned with conceit of his own powers when he has learnt that a Horse is an animal, and Billy is better than a Horse, and such like; instead of that beautiful interest in wild tales which made the Child a man, while all the time he suspected himself to be no bigger than a child."¹

¹ Life of Charles Lamb by E. V. Lucas, 1905, v 1, p 318-19.

The Persistence of Fairy Tales.—Nevertheless, in spite of Puritan divines and educational theorists, the fairies and giants of folk-lore were not altogether submerged by the flood of didacticism. Jack the Giant Killer, Rosamond in the Bower, The Babes in the Wood, Tom Thumb, and many other tales were still current in chapbook form. The French fairies slipped over to England with Perrault's Tales of Mother Goose (*Contes de ma Mère l'Oye*), and Mme. d'Aulnoy's *Contes de Fées*, and in 1824 with the translation of the Grimm Brothers' Household Tales, the German elves and kobolds became a part of the joy of childhood for all English speaking children

Value of Fairy Tales Recognized.—As the years have gone on, the fairy tale has steadily acquired prestige. We may still find, occasionally, a mother like the one Miss Olcott mentions² who says, "I do not like to read lies to my child," or, a child like the little girl, who several years ago, used to steal into the public library every day on her way from school to read the fairy book forbidden at home. But these are exceptional cases, most parents even if they do not favor the fairy tale do not taboo it. Students of children are agreed that folk-tales, taking their origin as they do, in the youngest, most childlike period of the world's history, should serve as the child's introduction to literature; and that they have an educational value.

Why Fairy Tales Are Good for Children.—First, fairy tales cultivate the imagination, and after all it is lack of imagination which causes most of the evil in the world. It is only unimaginative people who are cruel and brutal. And if imagination safeguards, it also en-

² *Children's Reading* 1912, p. 68

riches, adding a never failing charm to the dullest and most sordid surroundings and giving us the means of escape from the commonplace.

Second, fairy tales broaden the mental horizon. Many a child whose daily life seems of the narrowest and most prosaic kind, has found through the fairy tale all the wonder and mystery of

“Songs the sirens never sung,
Shores Ulysses never knew.”³

Third, fairy tales deepen and enlarge a child's emotional experience. He thrills with pride as the little tailor gets the better of the giant; he holds his breath in suspense as the last mantle is thrown over the eleventh swan brother, he shudders before the locked door in Bluebeard's Castle; and as a result, he is all his life more sensitive to the appeal of “brave romance,” wherever he may find it.

Fourth, fairy tales develop a sense of humour. Some children possess this sense in a much higher degree than others. This is apparent to the story-teller who often finds one child listening without a smile to the tale that has drawn a series of appreciative chuckles from others. For the child who takes life seriously, perhaps a little anxiously, or for the stolid youngster, such stories as the Three Sillies, Lazy Jack, Mr. Vinegar, or Hans in Luck⁴ are an excellent training in the perception of humour. Nearly all the old folk tales, and, in particular, the Drolls (to which class belong the four tales mentioned) are full of a vigorous and spontaneous humour.

³ Alfred Noyes. *Flower of Old Japan*.

⁴ The first three may be found in Jacob's *English Fairy Tales*, the last in Grimm's *Household Tales*. Lucretia Hale's modern nonsense stories of the Peterkin Family are also good for this purpose.

Uncle Remus's genial fun awakens a ready response. The literary fairy tale, when really excellent, is invaluable. It is often said that a child cannot fully appreciate the clever fooling of Alice in Wonderland, but while he is eagerly following Alice's adventures he is laying, unconsciously, the foundation for an appreciation of humour in literature. Kipling's *Just So Stories* have a similar value. Howard Pyle's fairy stories in *The Wonder Clock* and *Pepper and Salt* are full of humour and are told with a delightful drollness, irresistibly appealing. Stockton's stories, *The Bee Man of Orn*, *Clocks of Rondaine*, and others, are full of a humorous fancy. Thackeray's *The Rose and The Ring* belongs to the older children, who are leaving the fairy tale age behind them. They can appreciate its delightful absurdity without being puzzled by its burlesque quality. Of this book Andrew Lang said that he thought it "quite indispensable in every child's library, and that parents should be urged to purchase it at the first opportunity, as without it no education is complete."⁵

Fifth, indirectly and without preaching, fairy tales teach the child many priceless lessons. Teaching by parable is a time-honored method. Children especially need concrete examples, not abstract generalizations. Many are the lessons of truthfulness, temperance, courtesy, and generosity which the fairy tale brings home, while the qualities of greed, cruelty, and laziness are held up to ridicule. To a child there are no shades in conduct, bad is bad, and good is good; hence, the clear black and white of the old fairy tale is peculiarly satisfying. The prompt dispensation of reward and punishment appeals to his sense of justice. If the adult has forgotten how

⁵ Preface to the *Yellow Fairy Book*

he felt as a child when he came to the end of the fairy story, let him reread the conclusion of Martin Chuzzlewit. Mr. Pecksniff, with "a disconcerted meekness on his face . . . enormously ridiculous," Mr. Pecksniff completely unmasked by the old man he would have tricked and wronged and, moreover, laid flat on the floor by a blow from this same irate old gentleman's stick, while Martin, Tom Pinch, Mary, Ruth and Mark Tapley stand by as witnesses of the discomfiture of hypocrisy, gives us the same pleasurable sensation, as did the summary disposal of the wicked step-mother

Sixth, fairy tales counteract certain unfortunate tendencies of modern life. The constant bustle and hurry, the daily papers with their glaring headlines, the theatrical bill-boards and moving picture posters, the moving pictures themselves, all tend to make the modern child more sophisticated than the young person of an earlier day, and to keep him living at a high tension. He will crave the dramatic fairy tale, therefore, but however full of giants and ogres and exciting rescues of princesses this tale may be, the atmosphere is a healthy one, neither morbid, nor vulgar, nor encouraging precociousness.

Seventh, there is no better introduction to poetry. In the letter to Coleridge quoted above, Lamb says: "Think what you would have been now if instead of being fed with Tales and old wives' fables in childhood, you had been crammed with geography and natural history!" The atmosphere of the fairy tale, its "high hill among the trees of the forest, where the fox and the hare bid each other good night"; its talking beasts and flowers; its lakes and mountain caverns prepare a child for the magic of the great poets. "We cannot all hope to be classical scholars, but all may be steeped in folk-lore and

heroic romance in childhood, when the imagination is fresh and keen and so acquire a share of the old-world culture." ⁶

Danger in Adaptation.—If we think of the fairy tale as the child's introduction to literature we shall be chary of mutilating the old favorites under the guise of adaptation. There are, it is true, many folk tales which are not suitable for children; let these, then, be left out of the children's libraries; let us be sure that our editors and compilers are to be trusted, but let us refrain from destroying the strength and dramatic qualities of the versions which have stood the test of centuries.⁷ The changes are usually made by mistakenly zealous persons, on the ground that the originals are too painful for children. Andrew Lang had a word to say about these sentimentalists and, as usual, said it with refreshing vigour. "He could but indifferently sympathize with those anxious parents who think the stories of Bluebeard and Jack the Giant Killer too shocking for infant ears to hear. Our grandmothers, he declared, were not ferocious old ladies, yet they told us these tales and many more which we were not the worse for hearing 'Not to know them is to be sadly ignorant and to miss that which all people have relished in all ages.' Moreover, it is apparent to him and indeed to most of us, that we cannot take even our earliest steps in the world of literature, or in the shaded paths of knowledge, without encountering suffering and sin in some shape; while as we advance a little further, these grisly forms fly ever on before. 'Cain,' remarks Mr. Lang, 'killed Abel. The

⁶ C. T. Dodd. *Fairy tales in the schoolroom* Living Age v 235, p 373.

⁷ For examples of how *not* to treat fairy tales, see Miss Olcott's *The children's reading* 1912, chap 7 and Miss Gleason's *A word on picture books, good and bad* Public Libraries, v. 11, p 171-75, April, 1906.

flood drowned quite a number of persons David was not a stainless knight, and Henry VIII was nearly as bad as Bluebeard Several deserving gentlemen were killed at Marathon. Front-de-Boeuf came to an end shocking to sensibility and Mr. Ruskin.'"⁸

The Pathetic Realistic Story.—It is not the fate of the giant in Jack the Giant Killer, nor the death of Bluebeard that make the children's tender hearts ache; it is rather the too pathetic modern story of the ill-used child or animal The shade of a little yellow dog, homeless, abused, cold, and hungry, went trotting forlornly on for years through the imagination of one child, until childhood was left behind. It is a pity to bring home to children too early the sad truth that there is unhappiness and suffering in the world from which there is no immediate and visible relief. The young life should grow as Sophocles pictured it growing, "in those sheltered regions of its own, and the Sungod's heat vexes it not, nor rain nor wind, but it rejoices in its sweet untroubled being."⁹

The Classification of Fairy Tales.—Folk-lore is variously classified.¹⁰ For our purpose a simple division into myths; fairy tales, "taken to include tales in which occurs something 'fairy,' something extraordinary—fairies, giants, dwarfs, speaking animals";¹¹ fables; and legends will answer.

Early Favorites.—It is, of course, impossible to make a hard and fast rule which will apply in all cases to all children. In general, the little children, from four,

⁸ Atlantic monthly. Contributor's Club, v 69, p 854-5, June, 1892

⁹ Sophocles. *Trachineae*, tr. by R. C. Jebb, 144ff, quoted by Butcher in *Some aspects of the Greek genius*. 1893, p 315.

¹⁰ See E. S. Hartland's *English fairy and other folk tales*, also his *Science of fairy tales*, and the article on Folk-lore in the *Encyclopedia Britannica*

¹¹ Jacobs. *Preface to English fairy tales*.

five and six years on, are best pleased with, (1) the fables; the talking animals of the fable appeal to them, and its brevity is a distinct point in its favour; (2) with the simplest of the folk tales (nursery tales or *Marchen*), such as Jack the Giant Killer, Jack and the Bean Stalk, and Rumpelstiltskin. If the story deals with animals as the Three Little Pigs, or the Three Bears, so much the better; and the cumulative tales like *The Old Woman and Her Pig*, or *Henny Penny* (*Chicken Licken*) are always popular. As children grow older simple versions of some of the myths, such as the story of Echo, or Phaethon, may be told or read to them.¹² For the most part, however, the myths are better appreciated later.

Second Stage.—Here belong the more complicated and more romantic fairy tales, such as *The White Cat*, *Beauty and the Beast*, *Puss in Boots*, *Prince Darling* and *Princess Goldilocks*, *Snow White* and *Rose Red*. The *Arabian Nights*, of which Carlyle said, "It has given me more pleasure in my life time than any other book,"¹³ Grimm, Andersen, Andrew Lang's color fairy books, are enjoyed. Now is the time when the myths make their strongest appeal. Many of us can recall with what zest, between the ages of nine and twelve, we first read and then acted out the mythological stories.¹⁴

Children should certainly be familiar with Hawthorne's *Wonder Book* and *Tanglewood Tales*. The stories as told by Eustace Bright to Primrose, Periwinkle, Sweet Fern, Dandelion and the rest, seize upon the elements

¹² Good versions for this purpose are to be found in Coe, *First book of stories for the story-teller*

¹³ Charles Eliot Norton. *Life and letters* 1913, v 1, p 437.

which appeal to a child's imagination and best give him his first knowledge of Greek mythology. One can hardly be too young or too old for the Wonder Book. Nothing has ever been written for children more filled with idealism and poetry than the story of Pegasus and Bellerophon. Some of Hawthorne's most exquisite descriptions are found in the little introductions and conclusions to each story, which bring the gold of Indian Summer, the soft grays and whites of a winter landscape and the spring greenness before the eyes, and give children an unconscious liking for style. After Hawthorne, Kingsley's Greek Heroes should be read; and Bulfinch's Age of Fable, a book which has delighted many children, must by no means be forgotten. "Written for the reader of English literature . . . who wishes to comprehend the allusions so frequently made by public speakers, lecturers, essayists, and poets, and those which occur in polite conversation"¹⁵ And for entertainment as well. If children were familiar with it, there would be fewer complaints of the ignorance displayed by college students of even the simplest allusions. The child who knows his Hawthorne and his Bulfinch thoroughly is well equipped for his later reading. There are some recent versions of the Greek myths for children which are worth knowing. Peabody's Folk Stories is an excellent, simple version for little children. In Hutchinson's Orpheus and His Lute, the legend of Orpheus and Eurydice is used as the thread of a story with which other myths are interwoven, with so much poetry in thought and expression that older readers, as well as children, enjoy the book. Children of twelve and over, should be given Buckley's Children of the Dawn. This

includes the stories of Eros and Psyche, Alcestis, Atalanta, Hero and Leander, Paris and Oenone, and others. These stories are charmingly told, with unusual literary merit and a closer following of the originals than is usual. For Norse mythology we have Abbie Farwell Brown's *In the Days of the Giants*, Padraic Colum's *Children of Odin* and, for older children, Mabie's *Norse Stories Retold from the Eddas*. The heroic legend is especially appropriate for the child on the border line of the fairy tale age, when elves and witches are beginning to lose their magic and he is looking about him for new heroes and fresh worlds to conquer. The legends which grew up around the chivalrous Outlaw of Sherwood are delightfully told by Howard Pyle in his *Merry Adventures of Robin Hood*. Sidney Lanier's *Knightly Legends of Wales*; or, *The Boy's Mabinogion*, and other *King Arthur Stories*, Lang's *Tales of Troy and Greece*, Marshall's *William Tell*, Baldwin's *Roland*, and his *Siegfried*, should be in every school library.

The Modern Fairy or Wonder Story.—With the modern wonder stories we must class the fairy tales of Hans Christian Andersen, though so true is he to the spirit of the old tales that one is tempted to include him in the folk-lore group. Most children prefer Grimm to Andersen, many of whose stories are in truth too mature in thought for childish comprehension, but the fortunate child who turns over the pages of the thick volume until he finds and loves *The Nightingale*, *The Emperor's New Clothes*, *Thumbelina*, *Five Out of One Shell*, *The Ugly Duckling*, *The Little Sea Maid*, *The Wild Swans*, and best of all the *Snow Queen*, carries with him into adult years a touchstone to aid him in the choice of real literature.

Other literary fairy tales which the child should know besides those already mentioned are Mrs. Craik's *The Brownie*, and *The Little Lame Prince*. The latter, in particular, is a beautiful, idealistic story, and the ethical teaching of both is excellent. George Macdonald's fairy tales have a fine spiritual quality and a touch of mystery in the telling and atmosphere which charms children. All children should have read or told to them Ruskin's *King of the Golden River* and should be given the book to read it again for themselves. It seems to be the fashion nowadays to call Kingsley's *Water Babies* (as it is the fashion to call a great many other things) too difficult for children. Yet no child ought to miss its fine moral teaching and literary flavor. The best way to induce the average child to read it would doubtless be to read it aloud. De La Motte Fouqué's *Undine* and *Sintram*, with their mystery and romance, their forests and ancient castles, have fascinated many children. For older girls they are a good introduction to romance and love stories, while younger children enjoy them as pure fairy tales. These stories have rightly taken their place among the children's classics; we must, however, be wary of the modern fairy story as it is turned out to-day. It seems to appeal to many mediocre writers, who should not be writing for children at all, as an easy kind of book to write and sell. Their tales are poorly written, lacking in imagination, occasionally tinged with vulgarity. The best way to test a modern fairy story is to read at the same time one of the real masterpieces of fairy literature, new or old. The clumsy, tawdry or prosaic qualities of the poor tale will stand out unmistakably.

Recommended Fairy Tales and Collections.—There are many excellent lists of fairy tales, myths, fables and

legends, so it is unnecessary to do more than suggest good editions of the tales and collections of tales mentioned in this chapter. Versions for children of the Arthurian Legends are treated in the chapter on Classics for Children

The Teacher's Familiarity with Folk-lore.—Since fairy tales are a child's introduction to literature, and since in many cases it is the school and not the home which gives this introduction, much depends on the teacher's familiarity with myth, folk tale and legend, and also on his or her own appreciation of the beauty, humour, and ethical value to be found in the old stories. Teachers should familiarize themselves with the tales cited in this chapter and with many more. They should compare the folk-lore of different peoples, they should know where to turn for the best and most usable versions; above all they should test the stories by reading and telling them to children.

- Pyle, Howard. Merry adventures of Robin Hood. Scribner \$3 50. Abridged school edition. Scribner. .75.

284 THE USE OF BOOKS AND LIBRARIES

Rhys, Ernest, ed. *Fairy gold*. Dutton \$1.00.

Rickert, Edith. *Bojabi tree*. Doubleday. .75.

African folk tale with the repetition that appeals to little children.

Scudder, H E. *Book of folk stories* Houghton \$1 00 *Book of legends, told over again*. Houghton. \$1.00

Thorne-Thomsen, Mrs Gudrun.

East o' the sun and west o' the moon Row, Peterson. .64.

Young, Ella. *Celtic wonder tales retold; with decorations by Maud Gonne*. Dutton. \$2 50

Young, Ella. *The wonder smith and his son; illustrated by Boris Artzybasheff*. Longmans. \$2 25.

These two volumes contain folk tales collected from the Gaelic speaking people of Ireland, retold with rare beauty.
Zitkala-Sa *Old Indian legends retold* Ginn .76.

MODERN WONDER AND FAIRY TALES

Anderson, H. C. *Fairy tales*, tr. by Mrs. E Lucas, il. by Thomas, Charles and William Robinson. Dutton. \$3 00
The same in *Everyman's library*. Dutton. .80. This has some of the illustrations in reduced size and in black and white.

Aspinwall, Alicia *Short stories for short people*. Dutton. \$2.00.

Aulnoy, Comtesse d'. *Fairy tales* McKay \$3 50.

Barrie, Sir J. M. *Peter and Wendy*, illustrated by F. D. Bedford. Scribner. \$2 50.

Benson, E. F. *David Blaize and the blue door*. Doran. \$1 50

Bergengren, Ralph. *David the dreamer; illustrated by Tom Freud* Atlantic Monthly Press. \$2.50.

Beston, H. B *Firelight fairy book*. *Starlight wonder book*. Houghton \$2 50 each.

Full of delightful humour.

Bianco, Mrs M. W. *Poor Cecco; illustrated by Arthur Rackham*. Doran \$3 00

Brooks. W R *To and again*. Knopf \$2 00.

Delightfully humorous animal fairy tale.

Browne, Frances. *Granny's wonderful chair*. Macmillan. \$1.75.

Carroll, Lewis. *Alice in Wonderland and Through the Looking Glass* Macmillan. \$1 75.

- Casserley, Anne. *Michael of Ireland* Harper. \$1 50
Suggests the old folk tales in its simplicity, beauty and humour.
- Chrisman, A. B. *Shen of the sea* Dutton. \$2 00.
Short stories about China with a folklore quality and a delightful humour.
- Craik, Mrs. D. M. *Adventures of a brownie*. Harper. 75.
- Craik, Mrs. D. M. *Little lame prince*. Rand, McNally. \$1 50.
Beautifully illus. in colour by Hope Dunlap
- Dickens, Charles. *The magic fishbone*; illustrated by F. D Bedford. Warne. \$1 50.
- Farjeon, Eleanor. *Martin Pippin in the apple orchard*. Stokes. \$2 50 For older girls.
- Grahame, Kenneth. *The wind in the willows* Scribner. \$1 75.
- Hale, L. P. *Peterkin papers* Houghton. \$2 00.
Humorous tales of the absurd efforts of the Peterkin family to learn wisdom
- Howells, W. D. *Christmas everyday and other stories*. Harper. \$1 75.
- James, M. R. *The five jars*. Longmans. \$2 00.
- Kingsley, Charles. *Water-babies*. Dodd. \$1 50.
- Kipling, Rudyard *Jungle book*. Second jungle book. Century. \$1 90 each.

- Macdonald, Greville. *Billy Barnicoat*; a fairy romance for young and old; illustrated by F. D. Bedford. Dutton. \$2 50.
- Milne, A A *Winnie the Pooh*. Dutton \$2.00.
- Molesworth, Mrs M L. *The cuckoo clock*. Macmillan \$1 00.
- Moore, A. C *Nicholas; a Manhattan Christmas story*. Putnam. \$2 00

- Phillpotts, Eden. Flint heart. N Y Dutton \$1.50
 Ruskin, John King of the Golden River: Macmillan. \$1 00
 Stockton, F. R. Bee-man of Orn and other fanciful tales Scribner. \$2 00
 Clocks of Rondane and other stories Scribner \$1 35. A school edition with title Fanciful Tales, Scribner, .72, contains Bee-man of Orn, Old Pipes and the Dryad, and Clocks of Rondane
 Tarn, W. W. Treasure of the Isle of Mist. Putnam. \$1 90
 "A fairy tale for grown ups and children"
 Thackeray, W. M. The Rose and the Ring Macmillan. \$1 00.
 Turner, N. B. Zodiac town, illustrated by Winifred Bromhall. Atlantic Monthly. \$1 50
 White, E. O. The enchanted mountain Houghton. \$1.65.
 Wilkins, M. E. Pot of gold. Lothrop \$1 50
 Chiefly fairy tales but includes also "The Bound Girl" and one or two other stories of colonial times

EXERCISE.

These questions are meant to be suggestive rather than final. The instructor will probably prefer to make up her own set of questions based on the books available for the class work, and the special character of the class.

1. Read the story of The Little Mill, in Bryant's How to Tell Stories to Children. (The same story may be found in Lang's Blue Fairy Book, in Tappan's Folk-Stories and Fables, with the title "Why the Sea is Salt," and in Abjörnsen's Fairy Tales from the Far North, with the title "Quern at the Bottom of the Sea.") If possible, read or tell it to a child. Read also The Arab and His Camel in Scudder's Fables and Folk Stories (also in Baldwin's Fairy Stories and Fables); also The Greedy Shepherd in Browne's Wonderful Chair, or Which is Best? in Pyle's Wonder Clock Which seems to you best to present to children the folly of greed over-reaching itself? Why?

2. Of the three stories, Puss in Boots, Jack and the Bean Stalk, and Little Red Riding Hood, which would you select to tell to a child of five? Give the reasons for your choice.

3. Examine Jacobs' English Fairy tales and Lang's Blue Fairy Book. What seems to you the chief difference between the two collections?

4. Name three fables which you would recommend to tell to children in the first grade. Give reasons for your choice.

5. Read The Tiger, the Brahmin and the Jackal in Jacobs' Indian Fairy Tales (or in Bryant's Stories to Tell; or in Wiggin's and Smith's The Fairy Ring). If possible read or tell it to a child. Read also Big Claus and Little Claus in Andersen's Fairy Tales (given also in Lang's Yellow Fairy Book and Scudder's Children's Book). Which do you think the better story for use with children, and why?

6. Read The Princess on the Glass Hill in Lang's Blue Fairy Book (also in Wiggin's and Smith's Fairy Ring), or, East o' the Sun and West o' the Moon in Lang or Wiggin and Smith. Compare it with Andersen's Swineherd. Which would be preferred by most children under ten, and why?

7. Select one story to illustrate each of the following qualities: Courtesy, Generosity, Perseverance, Temperance.

8. Read Rumpelstiltskin in Grimm, in Lang, in Norton's Heart of Oak Books, v. 3, in Scudder, in Wiggin and Smith, and in any other place you can find it. Which version do you think the best? Why? Compare this story with Tom-Tit-Tot in Jacobs' English Fairy Tales, or in Hartland's English Folk and Fairy Tales, or

in Tileston's Children's Treasure Trove of Pearls. Which story do you think children would prefer? Why? Try the experiment of reading or telling both stories to a class or group of children.

9. Name several legends which you think would appeal especially to boys of twelve. Give reasons for your choice.

10 Read one story from Hawthorne's Wonder Book, and one from Kingsley's Greek Heroes. Which author seems to you most successfully to present the myth to children? Have you ever known a child who very much preferred one of these two books to the other? Read selections from each book to a child or a class of children and note which book seems the more popular.

11. Mention two legends and two modern fairy tales which you think especially suitable for girls of twelve or thirteen. Give reasons for your selection.

12 Is there any folk tale, or legend, which from your own experience you think should not be given to children? If so, why?

Chapter XVIII

POETRY

When the world was a quieter, less bustling place, before ears were deafened by the creaking of machinery and green places were blackened by the smoke of factories, people had more time for poetry. In olden days the minstrel was a welcome visitor, whether he stopped on the village green or sought admission at the castle gate. For years there was such a demand for songs and for stories in verse that ballads were peddled all over England by the chapman. Perhaps at no time in the world's history has there seemed as little natural taste for poetry as to-day. Where we find one child who delights in the Blue Poetry Book, we find dozens who regard poetry only as a school task.

Why Children Do Not Care for Poetry.—1. Indifference to poetry on the part of adults. The children's feeling is due largely to the attitude toward poetry assumed by the adults with whom they are associated. For the one adult who is familiar with the poets of the past and interested in the poetry of the present, there are a hundred who are utterly indifferent. When youngsters of five or six announce that they "do not like poetry," they are only reflecting something in the atmosphere around them. While there may be some few people whose bent, natural or acquired, makes poetry for them a sealed book, for the majority of us it should be a nat-

ural form of enjoyment, inspiration and relaxation. No amount of conscientious effort on our part to cultivate in children a love of poetry will be of any avail unless we love it ourselves

2. Unwise selection. Many of the poems selected by adults for children to read and memorize, belong to children only in name, for example, Whittier's Barefoot Boy, which expresses the feelings of middle-age looking back on boyhood. Many of Eugene Field's poems are reminiscent of childhood, rather than childlike in tone. How most children feel about this type of poem is illustrated by the little girl to whom an older friend suggested Mrs. Browning's "Child's Thought of God," as a poem to be learned by heart. After a conscientious effort to become interested, she quietly laid it aside, selecting for herself and memorizing with great enjoyment Mary Howitt's "Fairies of the Caldon Low."

3. Method of study. If a child's first and perhaps only association with a poem is a careful word by word analysis, it is morally certain that he is not going to love that poem and very probable that he will never love any other. Those of us who cried with the Knight of Snowden,

"Come one, come all, this rock shall fly
From its firm base as soon as I,"

shared the exile of the noble Douglas and the lovely Ellen, thrilled at the gathering of Clan Alpine, and lived for days in a world of Romance with the Lady of the Lake, are inclined to feel indignant on finding children confronted with questions which bring them rudely to earth. Unless children are first allowed to feel the romantic spirit of the poem they will gain little from a dis-

cussion of Scott's use of color words, or the effect of proper names in his verse

Value of Poetry.—If we are inclined to feel that it is of little consequence whether or not children are encouraged to become poetry lovers, let us think what it means to go through life without an appreciation of poetry. As Bliss Perry says, "Your true enthusiast [for poetry] is caught young." And so a love of poetry should be cultivated in boys and girls, not only because the music and swing of its verse, its stirring spirit, its beauty and magic and mystery belong to childhood, but also because he who makes a poetry lover of a child sends out into the world a man quicker to see and feel the beauty around him and stronger because of this keener perception. "Poetry lifts the veil from the hidden beauty of the world," said Shelley. "The great instrument of moral good is the imagination, and poetry ministers to the effect by acting on the cause." And he adds, "What were virtue, patriotism, friendship — what were the scenery of this beautiful universe which we inhabit, what were our consolation on this side of the grave and what were our aspirations beyond it, if poetry did not ascend to bring light and fire from those eternal regions where the owl-winged faculty of calculation dare not ever soar?"¹

Qualities in Poetry Which Children Like.—1. Rhyme and rhythm are the qualities which make the earliest appeal to children,—witness the fondness of very little children for repeating aloud the Mother Goose rhymes. Nowhere do we find more perfect rhythm than in these old nursery jingles, and this combined, as Mr. Charles Welsh says, "with the appeal to the imagination evoking the sense of wonder all along the plane of the

¹ Essay on poetry.

baby mind, account for the abiding place which these rhymes and jingles have in the literature of the nursery." ² It is the matchless music of the rhyme and rhythm in the *Child's Garden of Verses*, rather than the marvellous expression of the life of a child, which fascinates little children. This love for rhythm lasts long after baby days, and explains the popularity of Kipling with the older boys and girls

2. Objective quality. Children prefer action to reflection and poems of the epic and ballad type, or in other words, poems which tell a story, to poems which are purely subjective. Occasionally, a definitely reminiscent poem, such as Hood's,

"I remember, I remember
The house where I was born"

is a favorite, but on investigation, it proves to be, not the half-sad, musing note that attracts, but the swinging metre, the "roses red and white," the laburnum planted on the brother's birthday (the somewhat unfamiliar word *laburnum* adding a charm). It is by no means necessary that every line in a poem be clearly understood. Many children have been carried into Fairyland by the sound of the words and the wonderful color in Keats's "Eve of St. Agnes," or Coleridge's "Kubla Khan," and "Christabel," without understanding a half of what the poem is about. It is a grave mistake to provide children with only such poetry as they can easily understand. A great poem half comprehended is of more value to a child than many simple poems perfectly within his grasp.

In Scudder's *Children's Book*, there is an excellent selection of story poems or rhymes, which are prime

favorites with children. Among them are: "The Spider and the Fly," "Meddlesome Matty," "The Chatterbox," and others by Jane Taylor; "A Visit from St. Nicholas," "John Gilpin," "The Pied Piper," "Llewellyn and His Dog," "Paul Revere," "Lochinvar," "The Skeleton in Armor," and others. To these may be added "The Jackdaw of Rheims," "The Romance of the Swan's Nest" (Mrs. Browning), and "The Lady of Shalott"³

3. Lyrical quality. While it is natural that after the nursery rhyme stage is past, children should look for a story, many are so responsive to the music in verse, that pure lyrics, such as "Full fathom five thy father lies," and Tennyson's "Blow, bugles, blow," are loved and learned by children for sheer delight in their singing cadences.

4. The moral. Children do not object to, but rather enjoy a moral, hence the popularity, for many generations, of Hoffman's "Struwpeter," and the rhymes of the Taylor sisters. For the same reason they like "Goody Blake and Harry Gill," by Wordsworth.

5. Adventure and heroism. As children grow older the stirring qualities in poetry — heroism, patriotism, martial pomp, honor and daring, make an increasing appeal. Such poems as "How They Brought the Good News from Ghent to Aix"; "Incident of the French Camp," "Horatius," "Old Ironsides," "The Burial of Sir John Moore," "Charge of the Light Brigade," "Pibroch of Donald Dhu," "Sir Galahad," "The Destruction of Sennacherib," and many others of like character should be a part of the experience of every child. The ballad "knows no deserts but thinks of the world

³ See also "Story poems" in Wiggan and Smith. Golden numbers, and in other collections cited at the end of this chapter.

as all green and fresh and alive with poetry, with heaven above and all the hairs counted on every head,"⁴ and so seems to belong particularly to the realm of childhood. "Robin Hood and Alan-a-Dale," "Robin Hood and the Bishop," "Sir Patrick Spens," "The Hunting of the Cheviot," "The Heir of Lynne," "Kinmont Willie," and Scott's "Lovely Rosabelle," "Young Lochinvar," and "The Eve of St. John," are favorites. Nor should the modern ballads, such as "Lord Ullin's Daughter," "The Wreck of the Hesperus," "Lucknow," "The Sons of the Birkenhead," "The Red Thread of Honour," be forgotten. Scudder's *Children's Book* contains a selection of ballads, and Lang includes many in the *Blue Poetry Book*. The *Boy's Percy*, by Lanier, and the *Ballad Book*, compiled by Katherine Lee Bates, are excellent collections. The *Robin Hood Ballads* have been published with delightful colored illustrations by Mrs. Lucy Fitch Perkins in the *Dandelion Classics* series.

6. Romance and sentiment. With girls there usually comes a time when sentiment holds sway and they pass through a period of Adelaide Procter, Jean Ingelow, Owen Meredith, Moore's *Lalla Rookh*. Many of Mrs. Browning's and Tennyson's poems are popular, and Longfellow's "Golden Legend" is enjoyed.

Sir Walter Scott.—Scott's poetry gives us both romance and adventure in its finest form and the value of his poems for both boys and girls can hardly be overestimated. Stopford Brooke says, "I am sorry for the children who are not brought up on the poetry of Scott. It is an excellent foundation for the appreciation and love of all other poetry; it lays up in the minds of those who care for it elements of enchanting pleasure in after life.

⁴ Wilhelm Grimm, quoted by Gunmere in Preface to *Old English ballads*.

“My father waked us every morning with snatches from the ‘Lay,’ from ‘Marmion,’ and from the ‘Lady of the Lake,’ and the day was haunted with their charm. We learnt for ourselves more than half the poems. Wherever we played or walked on the hills, or by the sea, Scott taught us to build up tales of war and love around the names and scenery of the places, and to fill them with romantic adventures. The first expedition I made after I was twenty-one was made with my brother to Loch Katrine and the Trosachs, to Glenfinlas and Stirling, and it was one long ravishment; nor did I enjoy Wordsworth, who was then my companion, the less, but the more, because I was living every step of the way with Scott. Many years after, when years of London life had, I thought, lessened the romantic wonder, I went north and found myself in the early morning looking from a height over a castle famed in Border Minstrelsy, and beyond it lay the Solway and its hills, Lanercost, Askerten, Bewcastle, Liddesdale, Teviot, and Eskdale, and on the right the ridges of the Roman Wall, the valleys, the rolling rig and flow of the Border mosses and Border hills. There was scarcely a single name of river, mountain, or sea-estuary, castle or farmhouse, which was not known to me from the poetry of Scott. I leaned over the gate and looked long over the poetic land, and it seemed as if all the dew of youth fell upon me again, as if I were again in the ancient world of adventure, romance, love and war, which we have replaced by science and philosophy, trade and misery, luxury and poverty. But it was to Scott I owed the pre-eminent pleasure of that hour, an hour the impression of which I kept like a precious jewel, and which I have never lost.

“This is the power of Scott, and this a result of his

work. Every boy and girl who reads him with love feels the same, every man and woman who has read him with love has a similar experience. It is a great power and a great result, far more important than those imagine who, limiting themselves to the poetry of thought alone, are apart from the romance of the past, and from the freshening spirit it brings to an over-curious, over-wearied, over-peopled life. To be the voice and the inspirer of the young and of their romance; to have their praise, which is contained in their pleasure, from age to age, to be the kindler of their first joy in nature, in ancient, historic places, in the story-telling of wild love and sorrow; to establish that pleasure so that in after years they carry with them the power to make all lands romantic; to nourish into strength and passion the romantic heart—this is Scott's enduring fame as a poet. It is a just fame, worth a man's life, and it is the final criticism of his place as a poet for humanity."

Reading Aloud.—In no way is a taste for poetry more successfully cultivated in children than by the reading aloud of fine poems by someone who loves them and can read them well.

- Wiggin K. D., and Smith, N. A. Golden Numbers. Introduction.

EXERCISE.

1. Mention a poem which was a favorite of yours when a child or which is a favorite of some child you know. What is there in this poem which appeals to children?

2. What poet (not a writer for children) seems to you especially suitable for children? Why?

3. Make a selection of six poems to read aloud to children in the sixth grade. Give reasons for your choice.

4. What long poems of Tennyson do you consider as especially interesting and appropriate for boys and girls from 12 to 14? Is there any long poem which you would consider particularly unsuitable?

5. What qualities seem to you most necessary in a poem in order that it should appeal to children. Name a poem which you think has these qualities.

6. Mention a poem which you think gains greatly by being read aloud. Do you know of any instance where a child was led to like a poem by hearing it read aloud?

7. Mention a poem of the reflective type which you have found liked by some child.

8. If you were reading Lowell's Vision of Sir Launfal to children in the fifth grade, would you begin with the first line of the poem? If not where would you begin?

9. Compare *The Wind* in Stevenson's *Child's Garden of Verses* with *The Night Wind* in Eugene Field's *Poems of Childhood*. Which do you think a child would prefer and why?

10. Mention three lyrical poems which you think children would enjoy learning.

COLLECTIONS FOR THE YOUNGEST READERS

Edgar, M. G. *Treasury of verse for little children*, il. by Pogany Macmillan \$2.50 Crowell 75.

Forbes, E. E. comp. *Favorites of a nursery of 70 years ago*. Houghton. \$3.00.

McMurray, Mrs. L. B., and Cook, A. S. *Songs of the tree-top and meadow*. Public School Publishing Co. 60
Chiefly out-of-door poems

Roadknight, Mrs. *Old-fashioned rhymes and poems*. Longmans. \$1.00.

Pleasant collections of simple poems, including old-time favorites

Chapter XIX

CLASSICS FOR CHILDREN

What is a Classic? — One of the literary designations which come most trippingly from the tongue is that of a "classic." "Oh, that is one of the classics of the English language," we remark; or, "every one should have some acquaintance with the classics of other languages than his own" Yet if we were called upon suddenly for a definition of a "classic" in this sense, we might find ourselves at a loss for words. Let us recall some of the works which we may, without hesitation, place in this category; for example, the King James version of the Bible, Homer's *Iliad* and *Odyssey*, Malory's *Morte d'Arthur*, Chaucer's *Canterbury Tales*, Spenser's *Faerie Queen*, Shakespeare's plays, *Pilgrim's Progress*, *Robinson Crusoe*. With these in mind should we not say something like the following in describing a classic? A classic is a work which has appealed to a great variety of people at widely different periods of the world's history, and is therefore a work which presents permanent and universal truths. A classic not only has something to say but says it surpassingly well, with simplicity, beauty, and force, and with a perfect fitness of form to thought. The effect is to quicken and strengthen the reader's imagination. Lowell in his well-known definition says: "A classic is properly a book which maintains itself by virtue of that happy coalescence of matter and style, that innate and exquisite sympathy between the thought that gives

life and the form that consents to every mood of grace and dignity, which can be simple without being vulgar, elevated without being distant, and which is something neither ancient nor modern, always new and incapable of growing old."¹

Why Classics Appeal to Children.—Thinking of the qualities we have mentioned it is not hard to see why the classics appropriate for children appeal to those who can be led to read them. The story of the Iliad and of the Odyssey, the Old Testament stories, parts of the Arthurian legends have the very qualities which a child craves,—simplicity of speech, singleness of motive, and directness of action. The early civilizations, too, which they describe, create for the child a world which he can easily understand—simple, adventurous, full of a vigorous give and take. The story-teller keeps strictly to the matter in hand, with no digressions or expressions of opinion, and he uses the minute, realistic detail which children enjoy. Recall the story of Odysseus and his companions in the Cave of Polyphemus, or Robinson Crusoe building his raft.

Why Children Should Know the Classics Suitable for Them.—First, because in the classics children get a taste of real literature. They need an acquaintance with a few of the great books to counteract the mediocre quality of much of the present day juvenile literature. Second, the classics' breadth of vision enlarges a child's outlook. The boy who has defended the walls of Troy with Hector, wandered over the loud sounding seas with Odysseus, and sat at the Round Table with Arthur and

¹ Among my books 1870-75, v. 2, p. 126. See also Sainte-Beuve's essay: What is a classic. For definition see also Course of study for normal school pupils on literature for children, by Harron, Bacon and Dana Part 1 of the School department in modern library economy series.

his Knights will never be limited to the narrow horizon of the boy who knows only the ephemeral, modern, story. The classics help him to see in childhood and keep in manhood the vision splendid. Lowell says: "For my part, I believe that the love and study of works of the imagination is of practical utility in a country so profoundly material (or, as we like to call it, practical) in its leading tendencies as ours. The hunger after purely intellectual delights, the content with ideal possessions cannot but be good for us in maintaining a wholesome balance of the character and the faculties. I, for one, shall never be persuaded that Shakespeare left a less useful legacy to his country than Watts. We hold all the deepest, all the highest satisfactions of life as tenants of imagination"² In a more material way, as well, the classics enlarge a child's experience in the knowledge they give him of other times than his own; for instance, Homeric civilization in the *Iliad* and *Odyssey*, the days of chivalry in the Arthurian stories. Third, the classics supply young people with the best material for hero-worship. Every child is by nature a hero-worshipper, and this quality, if the right ideals are supplied, develops character. Is any moral teaching so successful as that which fills us with a glow of pride and enthusiasm and the resolve to be like our favourite heroes? Could any disquisition on truthfulness, honour, and courtesy be so effective with the boy or girl as the vision of Arthur and his Knights standing about the Round Table, each holding the cross of the hilt of his sword before him and each promising "to be gentle in deed, true in friendship, and faithful in love"? The classics teach us not in didactic fashion but by providing ideals. Mr. Mc-

² Books and libraries

Murry says in his *Special Method of Reading for the Grades* (p. 170): "A masterpiece works at the foundations of our sympathies and moral judgments. To bring ourselves under the spell of a great author and to allow him, hour after hour, and perhaps days in succession, to sway our feelings and rule far up among the sources of our moral judgments, is to give him great opportunity to stamp our character with his convictions. . . . Children are susceptible to this strong influence. Many of them take easily to books, and many others need but wise direction to bring them under the touch of their formative influence. A book sometimes produces a more lasting effect upon the character and conduct of a child than a close companion. Nor is this true only in the case of book lovers. It is probable that the great majority of children feel the wholesome effect of such books if wisely used at the right time. To select a few of the best books as companions to a child, and teach him to love their companionship, is one of the most hopeful things in education. The boy or girl who reads some of our choice epics, stories, novels, dramas, biographies, allowing the mind to ponder upon the problems of conduct involved, will receive many deep and permanent moral lessons. . . . Even in early childhood we are able to detect what is noble and debasing in conduct as thus graphically and naturally revealed, and a child forms unerring judgment along moral lines. The best influence that literature has to bestow, therefore, may produce its effect in tender years, where impressions are deep and permanent. There are many other elements of lasting culture-value in the study of literature, but first of all the deep and permanent truths taught by the classics are those of human life and conduct."

Last but not least an acquaintance with the classics gives the child the power to interpret his later reading. All literature is filled with allusions, which have no significance for him, unless he knows something of the Iliad, the Odyssey, King Arthur, Pilgrim's Progress, Gulliver's Travels, Chaucer and Spenser.

When Children Should Know the Classics.—Children should become acquainted with the classics suitable for them, early during their school days while their taste is being formed. Many children, indeed, enjoy having stories from Homer and the King Arthur stories read to them before they are old enough to go to school. Those who knew Christian, his burden on his back, Apollyon breathing forth fire and smoke, the Interpreter, Mr. Worldly Wiseman, and the terrible Giant Despair, as characters in a sort of delightful fairy tale familiar to their childhood, return to the Pilgrim's Progress in later life with a delight which the college student, making his first acquaintance with it as "required reading," utterly fails to find.

Selection and Adaptation.—Obviously, not all classics are appropriate for children. Among those most suitable are stories from Homer, the King Arthur stories, Pilgrim's Progress, Gulliver's Travels, Robinson Crusoe, and some of Shakespeare's plays. Whether children should be given adaptations of the Canterbury Tales and the Faerie Queen is, at least, an open question. Some children come naturally to the reading of these in their original form and it is of far more value to the growing boy and girl to light upon the Faerie Queen for himself, and, like Cowley, to be "infinitely delighted with the stories of knights and giants and monsters and brave houses," that he finds there, than to know it in an adapted

form. If the child, in the natural course of his education, is likely to read the *Canterbury Tales*, let him wait until he can feel the charm of "Whan that Aprille with his shoures soote" in Chaucer's own words. But many will have no further acquaintance with great English literature after they leave school. To them it is, perhaps, worth while to give some of the stories in adapted form that they may at least have heard of Una and the Red Cross Knight, the Maiden Britomart, the joyous *Canterbury pilgrims*, Palamon and Arcite and Emily, and Patient Griselda.

This brings us to the question of presentation. Many classics cannot be put into the hands of the average child as they stand, though some children enjoy Bryant's translations of Homer, Shakespeare's plays, *Paradise Lost* and others. The adaptation, retelling, abridgement, whatever method is used to bring a particular masterpiece within a child's reach, is of great importance. The spirit of the original should be retained or reproduced. It is not fair to palm off on children a milk and water dilution which bears no resemblance to the original except in name. There is too much of the "classic made easy." Florence Hill Winterburn says in *From a Child's Standpoint*: "The careful educators who are cutting down the classics to fit the youthful understanding should recollect to leave something for them to reach forward to. That which is a little beyond us is a stimulant and inspiration. Probably the bookish youngsters who read Shakespeare and Spenser before they were a dozen years old comprehended only a moiety of what their eyes rested upon, yet because the true and the beautiful is always simple, the atmosphere even of pre-eminent genius was not so rarified to them but they could delight in it

and breathe it over again, years after, in memories that were sweet and precious." And Lang, in the introduction to the Blue Poetry Book, remarks, "we make a mistake when we write down to children, still more do we err when we tell a child not to read this or that because he cannot understand it. He understands far more than we give him credit for, but nothing that can harm him. The half-understanding of it, too, the sense of a margin beyond, as in a wood full of unknown glades, and birds and flowers, unfamiliar, is a great part of a child's pleasure in reading."

Some Good Adaptations and Editions.—There are, fortunately, a number of classics retold and adapted for children in an artistic and successful way. Lamb's *Adventure of Ulysses* founded on Chapman's Homer, of which Lamb wrote, "Chapman is divine and my abridgement has not quite emptied him of divinity," will be enjoyed by the older children. There is an edition published by Longmans at 90 cents; and Heath publishes a school edition at sixty-four cents. Church's *Story of the Iliad* and *Story of the Odyssey* (Macmillan, \$1.75 each), are excellent retellings, simple and dignified. His *Iliad for Boys and Girls* and *Odyssey for Boys and Girls*, are written in still simpler prose (Macmillan, \$1.75 each). Walter C. Perry retells the stories excellently and with Homeric flavor in his *Boy's Iliad* and *Boy's Odyssey* (Macmillan, \$2.40 each). Padraic Colum's *Adventures of Odysseus and the Tale of Troy* (Macmillan, \$2), combines the two stories in an attractive readable way. In *The Toils and Travels of Odysseus* (Stokes, \$2.50), C. A. Pease has made a pleasing translation for older children. The *Adventures of Odysseus* by F. S. Marvin and others, Dutton, \$2.50, puts the story of the Odyssey

into simple and spirited modern English for younger children. Buckley's *Children of the Dawn* (Stokes \$1 75) includes the stories of Alcestis, Cupid and Psyche, Hero and Leander, Arethusa, Atalanta and others. These stories will please older children and it is an excellent book to put into the hands of older girls. A good selection of books on Greek myth and literature for a child to read or to have read to him is the following in the order indicated: *The Wonder Book and Tanglewood Tales*, followed by Kingsley's *Greek Heroes*, Baldwin's *Story of the Golden Age*, which relates the events preceding the Trojan War, Bulfinch's *Age of Fable*, Church's *Story of the Iliad and Odyssey*, and Buckley's *Children of the Dawn*. Palmer's prose translation of the *Odyssey* often appeals to children when read aloud (Houghton, \$2.00, abridged for schools, 75 cents), while some children take readily to Bryant's blank verse translations of the *Iliad* and *Odyssey* (Houghton, \$1.08 each).

KING ARTHUR STORIES.—Among the best adaptations for children of the King Arthur stories are the four books by Howard Pyle: *The Story of King Arthur and His Knights*, *The Story of the Champions of the Round Table*, *The Story of Sir Launcelot and His Companions*, *The Story of the Grail and the Passing of King Arthur* (Scribner, \$3 50 each), McLeod's *Book of King Arthur* (Stokes, \$2.50), Lanier's *Boy's King Arthur* (Scribner, \$2.50); and Stevens and Allen, *King Arthur Stories from Le Morte d'Arthur* (Houghton, 56 cents). Of these the McLeod is the simplest and easiest version. The Pyle books have strong literary merit; they are full of atmosphere and idealism and the spirit of chivalry. Some children find them a little difficult on account of the slightly archaic language, but all children, even those who

care little for books, are delighted with the Pyle stories when told to them. The Lanier and Stevens and Allen keep closer to the original, rearranging and simplifying but preserving the form and language. All older boys and girls should know one or the other of these, preferably the Lanier. William Henry Frost's *Court of King Arthur* (Scribner, 60 cents), and his *Knights of the Round Table* (Scribner, \$1.65) tell, in a pleasant conversational way, stories of King Arthur as they were told to a little girl during a journey to Winchester, Tintagel, Glastonbury, and other Arthurian localities. In the *Island of the Mighty* (Macmillan, \$2.25), Padraic Colum retells nine stories from the Mabinogion and there are still other excellent versions of the King Arthur stories. Eleanor Hull's *The Boys' Cuchulain* (Crowell, \$2) tells with spirit thirty of the hero stories of Ireland.

In the book of the *Happy Warrior* (Longmans, \$2.00), Sir Henry Newbolt retells in vivid fashion stories of Roland, Richard Cœur de Lion, Robin Hood, St. Louis, King Arthur and others, emphasizing the chivalric ideal and connecting it with present-day life.

ROBIN HOOD BALLADS.—Howard Pyle has worked the old Robin Hood ballads into a form which is a child's classic in itself, and no child should grow up without knowing it. (*The Merry Adventures of Robin Hood*. Scribner, \$3.50)

STORIES FROM SHAKESPEARE.—For stories from Shakespeare we have Lamb's *Tales from Shakespeare*, McLeod's *Shakespeare Story Book*, and Alice Spencer Hoffman's *The Children's Shakespeare*, each story in a separate volume (12 v. Dutton, 75 cents each,³ also published in one large volume, Dutton, \$3.50). The Lamb is

³ These are unfortunately out of print.

the simplest. Alfred Ainger, the editor of Lamb's Letters, says, "These tales have taken their place as an English classic. They have never been superseded, nor are they likely to be." There are a number of beautiful editions, one illustrated by Arthur Rackham (Dutton, \$3.50), one by N. M. Price (Nelson, \$2), and one by Elizabeth Shippen Greene Elliott (McKay, \$5). Houghton publishes a school edition for 75 cents. A good inexpensive edition is that published by the Oxford University Press (\$1.50), with 16 illustrations from the Boydell engravings; Macmillan publishes an edition illustrated by Maud and Miska Petersham (\$1.75). Miss McLeod's Shakespeare Story Book (Barnes, \$3) comes next in order of simplicity. The stories of sixteen plays are told with dialogue in the words of the dramas, and the plots are clearly brought out. The Hoffman stories are the fullest versions, the stories are well and simply told, and many extracts from the plays are incorporated, so that the transition from these stories to the plays themselves is not hard. A *Midsummer Night's Dream* for Young People in the Dandelion Classics (Stokes o. p.), is not a retelling, but the Cambridge text with certain omissions. This volume is excellent to put into children's hands along with the story of the play. The little story about the play's first production before Queen Elizabeth, which serves as introduction, will put them into the spirit of Elizabethan times and they will gain something from the imaginative illustrations in color by Mrs. Perkins.

OTHER CLASSICS—Robinson Crusoe, that book which has "pleased all the boys of Europe for near one hundred and fifty years,"⁴ is a classic which ought not to be

⁴ Leslie Stephen *Hours in a library* 1875, v. 1, p. 46.

adapted. Children should know it as it is; if they are not ready for it, give them the Swiss Family Robinson and wait until they are ready for the great work. It should not be weakened and its value as literature destroyed by any attempt to bring it down to words of one syllable. There are two excellent editions for children, containing the first part only, one illustrated in color by E Boyd Smith (Houghton, \$2.00); the other, illustrated by the brothers Rhead (Harper, \$1.75). The same thing may be said in regard to the simplification of Gulliver's Travels. Certain omissions are perhaps advisable but as children take a keen delight in the visits to Lilliput, and to Brobdignag, as Swift wrote them, why write them over in less literary form? An attractive edition is published by Harper, illustrated by Louis Rhead (\$1.75). Heath and Dutton publish inexpensive school editions. Don Quixote of the Mancha by Cervantes, retold by Judge Parry, illustrated by Walter Crane, is attractive and satisfactory (Dodd, \$2.50). Some children enjoy the absurdities of Rospé's Baron Munchausen; the best version for children is The Children's Munchausen; retold by Morgan Shepard; illustrated by Gordon Ross (Houghton, \$2 25). The large edition of The Pilgrim's Progress illustrated by the Rhead Brothers (Century, \$3.00), is a good one to put into children's hands. An excellent version of the Canterbury Tales is that by Darton, Tales of the Canterbury Pilgrims, retold from Chaucer and Others (Stokes, \$2 50). The illustrations and general make-up of this book are especially charming. The tales are retold with spirit. In McLeod's Stories from the Faerie Queene (Stokes, \$1.75), Royde-Smith's Una and the Red Cross Knight (Dutton, \$3.00), parts of the Faerie Queene are successfully retold. Stories from

Firdusi are given in Elizabeth Renninger's *Story of Rustem* (Scribner, \$1.75) and Helen Zimmern's *The Epic of Kings* (Macmillan, \$2.50).

SUGGESTED READING.

Lowell, J. R. *Books and Libraries*.

McMurray, C. A. *Special method in reading for the grades*. Chapter 9, Educational value of literature. Chapter 10, The use of masterpieces as wholes

Olcott, F. J. *Children's reading* Chapter 1, The influence of good books. Chapter 11, Some classics and standards.

EXERCISE.

1. Compare Lamb's *Tales from Shakespeare*, McLeod's *Shakespeare Story Book*, and Hoffman's *The Children's Shakespeare*. Which do you think the most interesting? Which would children prefer and why? Read at least two of the same stories as given in each of these collections.

2. Examine Marvin's *Adventures of Odysseus*, Padraic Colum's *Adventures of Odysseus and the Tale of Troy*, Perry's *Boy's Odyssey*, Church's *Story of the Odyssey* and Lamb's *Adventures of Ulysses*. Which do you think a boy of 12 would prefer and why?

3. Read in Malory's *Morte d'Arthur* the story of the sword Excalibur. Read it also in Pyle's *King Arthur and his Knights*, in McLeod's *Book of King Arthur*, in Lanier's *Boy's King Arthur*, in Stevens and Allen's *King Arthur Stories*, in Frost's *Court of King Arthur* (and in any other book of *King Arthur Stories* for children which is available). Which do you prefer? Which do you think children would find the most interesting and

why? Which do you think best reproduces for children the spirit of the original?

4. Did you read *Pilgrim's Progress* as a child? If so, what, as you recall it, was your feeling about it? Do you know any children who enjoy reading it or having it read to them? If possible, try the experiment of showing some child, who does not already know it, the large illustrated edition of *Pilgrim's Progress* mentioned in this chapter, and telling him parts of the story.

5. Compare a chapter of *Robinson Crusoe* in its original form with the corresponding part of the story in a simplified version (i. e., *Robinson Crusoe* written anew for children by J. Baldwin, American Book Co., or *Robinson Crusoe*, adapted by Miss Godolphin, Educational Publishing Co., etc.). What qualities does it seem to you to lose in the simplified version? Does it gain anything? If so, what?

6. Suggest other classics than those mentioned in this chapter which you think children would enjoy.

Chapter XX

CHILDREN'S STORIES

While one child is naturally attracted by the kinds of literature already discussed,—legends and fairy tales, the classic stories and poetry, another left to himself turns to something more commonplace. But both usually unite in a liking for stories about other boys and girls; the difference being that a child with a taste for the best will read the modern stories in *addition* to his other favorites, while his less imaginative brother will confine himself to the present day fiction written for children.

An Abundance of Material.—The home story, the school story, the outdoor and adventure story, the historical story are always in demand and there is always a large supply on hand. Indeed one difficulty in dealing with fiction for children lies in the fact that such a tremendous number of these juveniles is published. Many mediocre writers are turning out every week pot-boilers in the form of stories for children, and the poor story is published at a price within the reach of many for whom the seventy-five cent, one dollar, and one dollar and a half children's book is prohibitive.

The Series Book.—In the popularity with both boys and girls of books in long series, lies another danger. One series read from beginning to end would cause any child's taste to deteriorate. Even series by good writers are not to be relied on; they have a surprising way of going from good to fair and from fair to poor.

Boys and Girls Must be Led to Prefer the Better Books.—It is impossible; nor is it perhaps advisable, to control all the reading done by children. Our aim must be to give them enough of the best so that they will want something besides the mediocre

Qualities Which Children's Stories Should Have.—

1. A wholesome, normal atmosphere. Stories for children should be based on a child's natural interests; they should neither be surcharged with excitement, nor sophisticated in tone

2. Refinement and high ideals. Excellent examples of home stories which illustrate these qualities are Miss Alcott's *Little Women*, and Mrs. Richards' *Hildegarde Stories*. Vachell's *The Hill* is a school story full of a fine and ennobling spirit. Besides presenting a delightful home life and high ideals of personal conduct, such stories as Miss Alcott's and Mrs. Richards' have the merit of making good reading attractive. There are some people who never recommend a book to us, they have apparently no mission to preach the doctrine of good literature, but when we are with them we find that our standard of taste is higher. The Alcott family were lovers of good books — hence *Pickwick Papers*, *Pilgrim's Progress*, *Undine* and *Sintram* and others, are mentioned in *Little Women* as naturally as dresses, parties, and new umbrellas. Doubtless many a girl has read *Undine* and *Sintram* because her favorite Jo "had wanted it so long"; or, memorized good poetry because Mrs. Richards' *Hildegarde* knew so much by heart; or, looked up *Drummond* of Hawthornden and *Kit Marlowe*, after reading *Hildegarde's Holiday*. The delightful English children in *Lucas's Slowcoach* know *Housman's Bredon Hill* and *Milton's Lycidas* as a matter of course and enjoy them

outside of school hours, and in Alice Brown's *Secret of the Clan*, the Merchant of Venice is a real joy to the four little girls.

3. Another quality of value in fiction for children is its power to broaden a child's mental horizon by giving him a knowledge of other countries and conditions of life than those with which he is familiar. Probably no books of description do this so successfully as a good story. Readers of Charlotte Yonge's and Mrs. Ewing's books find themselves surprisingly at home on English soil. Flora Shaw's delightful *Castle Blair* gives glimpses of Irish moor and river and the atmosphere of Irish country life a generation or two ago. Crichton's *Peep-in-the-World* tells of the life of a little girl in Germany of to-day. Children living in the North should know Mrs. Davis's *Moons of Balbanca*, Baylor's *Georgian Bungalow*, and Mrs. Stuart's *New Orleans Story of Babette*; while Southern children may well become acquainted with such books as Sarah Orne Jewett's *Betty Leicester*, Vaile's *Orcutt Girls* (old time Academy days in New England), Stoddard's *Winter Fun*, Aldrich's *Story of a Bad Boy*, and Mrs. Wiggin's *Rebecca of Sunnybrook Farm*. Some children greatly enjoy stories of other children whose lives are different from their own; more, perhaps, prefer books dealing with things with which they are familiar; all, however, should have the opportunity of adding new countries to what Leigh Hunt calls, "the very curious map in which the world of books should be delineated."¹

4. Good English: While we cannot always insist on style in stories written for children, we must at least make sure that they are written in good, grammatical

¹ Read his essay *The world of books*, in *Men, Women and Books*.

English If there is a literary flavor as in Kipling's Puck of Pook's Hill and Lucas's Slowcoach, so much the better.

Qualities to be Avoided.—1. Morbid introspection For years the famous Elsie Dinsmore series has served as an example of this fault carried to an extreme. There are other books more dangerous in this respect because less absurd.

2. A tendency to overemphasize the importance of the youthful hero or heroine. Books are not infrequently found in which the older people are put in the wrong, while the young person is represented as displaying remarkable perspicacity and intelligence in directing his own — and his elders' — affairs.

3. Pertness and disrespect in speech and attitude toward those in authority.

4. Melodrama: highly colored plots and incidents which convey a knowledge of the world which children need not possess.

5. Sentimentality which encourages girls to be on the lookout for possible love affairs.

6. False views of life: Certain books give the impression that success is attained by some lucky turn of fortune's wheel rather than by hard work and perseverance; as, for example, the Alger books.

7. Commonplace language, thought and atmosphere.

Stepping Stone Books.—In the case of children who have read little and that little not of the best, certain "stepping stone books," as they are sometimes called, may be used to prepare the way for something better. These stepping stones are not above criticism as to form and matter. They are usually none too well written and they are frequently too full of exciting adventure to be prob-

able. But at least they are wholesome and clean in tone and do not present a world askew and out of proportion.²

The Home Story.—Miss Alcott's books and Mrs. Richards' Hildegard stories have been referred to as excellent home stories; a few other good examples of this type will be found at the end of the chapter.

The School Story.—The average school story does not reach a very high level. Most of the dozens of boarding school tales turned out yearly are wooden in characterization, stereotyped in plot, and consist chiefly of descriptions of football and baseball. Vachell's *The Hill* is perhaps the best modern school story. This is English and therefore not so popular with American boys as books telling of sports and customs which are familiar. Arthur Stanwood Pier has written the best recent stories of American school life. Some of R. H. Barbour's school stories are good, but as a writer he is uneven. For girls we have, among the older books Coolidge's *What Katy Did at School*, Vaile's *Orcutt Girls* and Sue Orcutt, and *Peggy* by Mrs. Richards. Edna A. Brown's *Four Gordons* is an excellent combination of home and school story.

The Outdoor and Adventure Story.—The Jack books by Grinnell, Stoddard's and Kirk Munroe's books are popular representatives of this type. This class has been rapidly reinforced of late by the books dealing with the Boy Scout movement. Like the school stories they are apt to lack characterization, and originality of plot, but they are generally wholesome in tone and make for

² A few such books are suggested at the end of the chapter. For fuller lists see Harron, Bacon and Dana. Some substitutes for dime novels, in *Course of study on literature for children*; Annotated catalogue of books used in the home libraries and reading clubs. Carnegie Library of Pittsburgh.

manliness. Masefield's *Jim Davis* is a boy's book much above the average, as are also *The Adventures of Billy Topsail* and *Billy Topsail and Co.* by Norman Duncan. The Indian stories by Stoddard, Munroe, Schultz, and other writers are very popular. And these may lead to the reading of Grinnell's *Story of the Indian*, Parkman's *Oregon Trail* and *Conspiracy of Pontiac* and other books of real value.

The Historical Story.—Most boys seem to have an insatiable appetite for war stories. They are always eagerly read in spite of the sameness of plot, incident, and hero, which characterizes the great majority. "‘There seem to be a good many of them,’ said Miss Muffett,” referring to Mr. Henty’s boys, “‘but I’ve sometimes thought that there may be only two, only they live in different centuries and go to different wars.’”³ Tomlinson’s *Revolutionary series* and *War of 1812 series* and Altsheler’s stories of pioneer days are much in demand in the libraries. Under the guidance of a skilful teacher this taste may lead to the reading of really valuable historical books. Occasionally we find an historical story for children which has atmosphere, spirit, and characterization, as Twain’s *The Prince and the Pauper*, Dix’s *Merrylips and Soldier Rigdale*, Pyle’s *Men of Iron* and *Otto of the Silver Hand*, and Masefield’s *Martin Hyde*, *Duke’s Messenger*.

LIST OF STORIES.

Only a few stories of each type can be listed. For additional titles see the recommended lists in Chapter 23.

³ Crothers. *Miss Muffet’s Christmas party*. 1902, p. 14.

HOME STORIES

Stevenson, B. E. The young section-hand. Page. \$1 75.

EXERCISE.

1. Suggest three books to offer a boy as substitutes for the Alger books. In what order would you give them to him?

2 Name three stories which you would strongly recommend for girls of twelve or thirteen. Give reasons

3. Are you familiar with any of the following series: Motor Boys, Airship Boys, Aeroplane Boys? How would you criticize them? Recommend a course of reading for a boy addicted to this kind of book.

4. What seems to you the most valuable quality in Miss Alcott's books for girls?

5. Compare The Lass of the Silver Sword (Dubois) with The Slowcoach (Lucas). Which do you think most children would prefer and why? Which do you prefer? In which do you think the children are most naturally drawn?

6. Compare R. H. Barbour's Tom, Dick and Harriet with his Double Play; or with any of the other books by Barbour listed in this chapter. Would you add Tom,

Dick and Harriet to the list? Give reasons for or against doing so.

7. Read either *Lady Jane* or *Toinette's Philip* by Mrs. Jamison. What do you think would be the effect on a child of a long course of similar books?

8. Read Hughes's *Tom Brown's School Days* and a school story by Pier or Barbour. In general, and besides the fact that one is English and one American, how do they differ?

9. Read Masfield's *Martin Hyde*, *Duke's Messenger*; or Pyle's *Otto of the Silver Hand*; or Huntington's *His Majesty Sloop Diamond Rock*; or Dix's *Soldier Rigdale*. Compare it with one of Tomlinson's *Revolutionary* or *War of 1812* stories. Which do you prefer and why?

10. Read or examine Gilchrist's *Helen-over-the-wall*, Alice Brown's *Secret of the Clan*, E. A. Brown's *Four Gordons*, Adams' *Midsummer*. What do you think are their strongest points? Do you find in any one of them anything which you consider a defect?

11. Name the qualities you consider necessary for an ideal story for little girls from eight to ten. Look over the books in the lists at the end of this chapter which are marked for little girls. Do you find any which satisfy you?

12. Read or examine Shaw's *Castle Blair*; Masfield's *Jim Davis*, Jackson's *Nelly's Silver Mine*. To what kind of children will each one appeal? Have you had any experience with children in regard to these three books?

Chapter XXI

OTHER BOOKS FOR CHILDREN

Besides the children's books already mentioned (i. e., fairy tales, classics for children, poetry and stories) there are other books written for children which are useful and often popular. Most of them, however, have little value as literature. For purposes of discussion we may divide these books roughly into the following groups:

History and Biography.—The most successful histories written for children are those which emphasize the romantic and biographical side of history. The form in which history makes its first appeal to children is not in connected narrative, however simple, but accounts of dramatic incidents, or a series of dramatic incidents. Examples are Scott's *Tales of a Grandfather* (which were told to Sir Walter's little grandson before the author put them in writing); Grace Greenwood's *Merrie England*; Lodge and Roosevelt's *Hero Tales from American History*; Farjeon's *Mighty Men from Achilles to Julius Cæsar*, and, *Mighty Men from Beowulf to William the Conqueror*; and for younger children, Eggleston's *Stories of Great Americans for Little Americans*; Pumphrey's *Stories of the Pilgrims*; and Baldwin's *Fifty Famous Stories Retold*. Next come simple narratives such as Tappan's *Elementary History of Our Country*; Hillyer's *A Child's History of the World*; Marshall's *Island story [England]*; Griffis' *Young People's History of Holland*; and Van Loon's *Story of Mankind*. From

these the step will be easy to the books by Fiske and Parkman, which ought to be in every High School Library.

HISTORICAL FICTION.—Children probably gain a better understanding of a country or a period from a good historical story than from reading juvenile histories. A few historical stories for children are listed at the end of the preceding chapter and there are a number of historical novels which children should know as they are ready for them. With most, this will be in high school years, but some boys and girls enjoy them earlier. First and foremost among them are Scott's novels, particularly *The Talisman*, *Ivanhoe*, and *Quentin Durward*; Dickens' *Tale of Two Cities*; Stevenson's *Black Arrow*; Kingsley's *Hereward*, *the Wake*, and *Westward Ho!*; Bulwer-Lytton's *Last Days of Pompeii*.

BOOKS ON CITIZENSHIP AND GOVERNMENT.—Such simple books on the duties of citizenship as Dole's *New American Citizen* and Richman and Wallach's *Good Citizenship*, and books describing national, state and city government, such as Jenks and Smith's *We and Our Government*, may well be brought to children's attention in connection with histories of their own country.

PREHISTORIC TIMES AND PRIMITIVE MAN.—There are a few books for children dealing with the early history of the world and with primitive man—Waterloo's *Story of Ab*, Ewald's *Two Legs*, Mix's *Mighty Animals*, MacIntyre's *Cave Boy of the Age of Stone*, True's *Iron Star*, Kummer's *First Days of Man*, and, Erleigh's *In the Beginning*. a first history for little children.

HISTORICAL BIOGRAPHY.—This is one of the best ways in which to present history to children. The historical biographies of Jacob Abbott and his brother J. S. C.

Abbott although written years ago are still readable and interesting.¹ Eva March Tappan has written the lives of Alfred the Great, William the Conqueror, Queen Elizabeth and Queen Victoria for children in simple, interesting style, and there are two series of biographies for children which include mainly historical characters. These are Upton's Life Stories for Young People and the Children's Heroes Series.² The latter is more attractive in appearance, with colored illustrations, and is more childlike in style. The Life Stories are better suited, on the whole, to the high school than to the elementary school library. A book containing much interesting biographical material is Marshall's English Literature for Boys and Girls, a well written and attractively illustrated book which should be accessible to seventh and eighth grade children as well as to high school students.

OTHER BIOGRAPHIES.—Accounts of great and noble men and women of every age teach children valuable lessons of heroism, self-denial and perseverance. Mrs. Richards' Florence Nightingale was written especially for girls; Moses' Life of Louisa Alcott is good, though Miss Alcott's Life, Letters and Journal, edited by Mrs. Cheney, is better. Mrs. Lang's Red Book of Heroes tells of the lives of Florence Nightingale, Father Damien and others. The lives of Livingstone and Stanley are told in the Children's Heroes Series. Mrs. Wade's Wonder Workers tells briefly of Luther Burbank, Helen Keller, Jane Addams, Thomas Edison, William George, Wilfred Grenfell and Judge Lindsey.

Geographical Books.—There are six well-known series of geographical books for children; arranged in

¹ For some of the best see the end of chapter.

² See end of chapter.

order of difficulty in descending scale they are: Peeps at Many Lands, Children of Other Lands, Little Schoolmate Series, Little People Everywhere, the Little Cousin Series and the Dutch Twins, Irish Twins, Japanese Twins, etc., by Mrs. Perkins. The books in the Peeps at Many Lands Series make no attempt at a story; they are, as a rule, well written and are beautifully illustrated in color, but not strongly bound. A few of the best are listed at the end of the chapter. They are suitable for children of twelve and over. In the Children of Other Lands Series (When I was a Boy in Turkey, When I Was a Girl in Italy, etc.), the author of each volume tells about his or her native country, and as a result the accounts are usually vivid and interesting as well as accurate.

The Little Schoolmate Series tells in story form of home and school life in different countries, bringing in history and description and suggesting very successfully the atmosphere of each country described. The books in this series are more spontaneous and the style is better than in most of the geographical series.

Little People Everywhere also describes child life in different countries in story form, giving a good deal of information about customs, history and daily life. The books in this series are illustrated by photographs. They are better written than those in the Little Cousins Series, which is the poorest in style, though some of its volumes are better than others. Most of them seem very perfunctory and uninteresting to the adult, though many children seem to enjoy them. Little People Everywhere should be used in preference to the Little Cousin Series, when possible. The information in both series is, on the whole, accurate and reliable. The "Twin Books" have more humour and more of a story than most of the books

about other countries and are much enjoyed by the younger children. The illustrations by the author are very attractive. The volumes vary in difficulty, the Dutch, Irish, Japanese and Cave Twins are simple enough for children of nine and ten to read to themselves. The Scotch, Spartan, Italian and others are for slightly older children. A valuable and well written book which gives much useful information about the forests, mines, wild life, and other resources of the United States, is Price's *Land We Live In: The Boy's Book of Conservation*.

Animal Stories.—The first kind of nature book to appeal to children is the animal story. Some years ago a spirited controversy took place between Mr. Burroughs and Mr. William J. Long on the subject of nature books³ Mr. Burroughs accused the "modern school of nature study" of attributing the "whole human psychology" to the animals they portrayed, and of sometimes calling on their own invention to explain the phenomena of animal life. But Mr. Burroughs criticized their books only on the ground that they are "put forth as veritable history and thus mislead their readers." As stories he gave them high praise and it is in that light that we chiefly need to consider them. Little children do not want a scientific fact, they do want a story; considered as stories, the books which describe animals in terms of human beings do not mislead children. For them, Raggylug and his mother, Krag and Johnny Bear, are just as true as Baloo and Bagheera in the *Jungle Books*,—and no more so; indeed to some children the *Jungle folk* are infinitely more real and entertaining. As children grow older; they enjoy

³ See Burroughs. Real and sham natural history. *Atlantic Monthly*, v. 91, p. 298-309, March, 1903, Long, Modern school of nature study and its critics. *North American*, v. 176, p. 688-98, May, 1903; Burroughs, Literary treatment of nature. *Atlantic Monthly*, v. 94, p. 38-43 July, 1904.

books without a story interest, such as Burroughs' *Birds and Bees*, and *Squirrels and Other Fur Bearers*; John Muir's books, and those by W. H. Gibson and Dallas Sharp, and can be shown the difference between the two kinds of nature books. *Lives of the Hunted*, and *Wild Animals I have Known* (Seton), and Long's *Secrets of the Woods*, and other books of this type should be classed with fiction, not, as in some libraries, with the books on natural history. Among the best of the animal books and less open to criticism on the score of making the animals too human, than those by Long and Seton, are the books by C. D. G. Roberts—*Kindred of the Wild*, *Haunters of the Silences*, and others. Dhan Ghopal Mukerji's stories of the animals in the jungle (*Kari the Elephant* and *Hari the Jungle Lad*), are delightful.

STORIES OF DOMESTIC ANIMALS.—There are some good stories of domestic animals which are very popular with little children. Many of this class are written primarily to encourage the proper care and treatment of animals. Some of these, like Sewall's *Black Beauty*, are good stories as well, and much enjoyed by children; others are painful and make too strong an appeal to the child's sympathies. The purely imaginative story, which is really a sort of fairy tale, often has a greater value in encouraging kindness to animals, as well as a far higher literary quality, for example, Lagerlof's *Wonderful Adventures of Nils*.

Descriptive Nature Books.—There are a number of excellent nature books written for children, which do not use the story form, but which are clear, simple, and interesting, such as Olive Thorne Miller's *First and Second Book of Birds*, Thompson's *Water Wonders Every Child Should Know*, Ball's *Star-Land*, and Lewis's *Astronomy*

for Young Folks. Some suggest the story form by their style and title as Morley's Bee People, Patterson's Spinner Family, Parsons' Plants and Their Children. These descriptive books lead naturally to the adult books by Burroughs, Bradford Torrey, Muir, and others.

Guides and Handbooks.—Before they leave the elementary school many children enjoy learning to use some of the simple guides and manuals. Mrs. Parsons' How to Know the Wild Flowers is so charmingly written that children gain more from using it than the mere names of the flowers. Chapman's Bird-Life, a Guide to the Study of Our Common Birds, and his Handbook of the Birds of Eastern North America can be used by children, though the Pocket Nature Guides (Doubleday) for birds, flowers, butterflies and trees are still simpler. Clarke's Astronomy from a Dipper tells how one who knows only the Dipper may find the other constellations and important stars. Its charts are clear and simple, and the humour of its brief descriptions delights children as well as adults.

Physiology and Hygiene.—Woods Hutchinson's Child's Day follows a normal child's activities from the time he arises until bedtime, under such chapter headings as "Good Morning"; "Breakfast"; "Going to School"; "Absent To-day," etc. It explains simple principles of hygiene, and facts of anatomy and physiology. It is well illustrated and written in a way to interest children. Grenfell's Yourself and Your Body is for older children. Gulick's Emergencies tells what to do in case of accidents, and how to avoid them. It is based on a study of accidents common to children and brings out clearly the danger of fire, of pointing a gun at other people, of neglecting cuts and bruises, of playing in the streets, etc., as well as what to do after an accident has

occurred. Jewett's *Health and Safety* is a useful and simple little book on personal hygiene; the physiology of *The Body at Work*, by the same author, is more advanced. Town and City, also by Jewett, tells of community hygiene, and encourages civic pride in children. All this series is well illustrated.

Books Telling How to Make and Do Things.—There is a host of these books, and they are often useful and sometimes serve to arouse the interest of children who do not care much for reading. Most boys go through the stage when they want books which will aid them in making experiments and in building all sorts of things from rafts to bird-houses. One or two books which will give suggestions for work and play of this sort should be in every classroom library. From these, boys turn readily to descriptive books such as Williams' *How It Works*, and Philip's *Romance of Modern Chemistry*. Besides handicraft books for girls (such as Beard's *Things Worth Doing and How To Do Them*), there are several excellent little books about housekeeping, cooking, and sewing (see list at the end of the chapter), which many small girls enjoy, and which probably awaken an interest in household affairs, even if they do not serve as a very important means of instruction. There are several good, simple books on gardening for children, such as Duncan's *Mary's Garden and How It Grew*, and *When Mother Lets Us Garden*. Higgins' *Little Gardens for Boys and Girls* contains good material but is too much written down in style.

In choosing these practical books it is necessary to consider the following points. Are they really practical? Are the instructions clear and simple? Are there diagrams and plans and drawings which a child can follow?

Do they call for materials which are out of a child's reach on account of expense or other reasons?

Fine Arts.—Books for children on the fine arts are a rather negligible quantity. Comparatively few have been written and most of those are not particularly satisfactory. Among the successful ones are Steedman's *Knights of Art* (Jacobs), sketches of eighteen Italian painters from Giotto to Veronese, illustrated by reproductions of their paintings; and Conway's *Children's Book of Art* (Macmillan), which attempts to give by means of specific examples something of the history and significance of painting. Miss Hurll has written a number of artists' biographies (Houghton, \$1 15 each), but these, like the lives of Beethoven, Bach, Haydn, and Mozart, in the Upton's *Life Stories for Young People*, and others, are better suited to the high school than to the elementary school library. For music we have Bauer and Peyser's *How Music Grew*, a well illustrated volume for older children on the history of music, while LaPrade's *Alice in Orchestrabilia*, in the guise of a story, describes the various instruments in the orchestra. Percy Scholes in his *Book of the Great Musicians* explains musical forms and instruments. There is a Second and Third Book, and all three are published in one volume called *Complete Book of the Great Musicians* (Oxford). Mrs. Satis N. Coleman's *Creative Music in the Home* tells, in a way that children can understand, and with directions which they can follow, how to make many musical instruments and how to make tunes to play on them. In addition there are stories about the history and origin of music, and many illustrations. All the material in the book has been actually used with children.

STORIES FROM HISTORY

Baldwin, James. Fifty famous stories retold. Amer. Book Co.
.56.

Legendary and true stories of famous heroes of all nations.

Brooks, E. S. Historic boys, Historic girls. Putnam. \$1.75
each.

King James version.

EXERCISE.

1. Examine one volume from each of the following series: Peeps at Many Lands; Children of Other Lands; Little Schoolmate Series; Little People Everywhere; Little Cousin Series; the "Twin Books." Which do you prefer and why? State the age of the child for whom you think each series suitable.

2. Name a volume of history, not necessarily written for children, enjoyed by boys of 12-14

3. What do you think is the special value for children of each of the following books: Black Beauty (Sewall);

The Jungle Book (Kipling); First Book of Birds (Miller)?

4 Examine Harper's Outdoor Book for Boys (Adams) and Mary's Garden and How it Grew (Duncan); or Boy Pioneers, Sons of Daniel Boone (Beard) and Little Housekeeping Book for a Little Girl (Burrell). Do you think the directions for making and doing things simple and practical? Would these books make children want to do the things described?

5 From the books listed in this chapter and in Chapter XX select several books about one of the following countries (either history, biography, stories, historical fiction, or all of them), which you think would be interesting to a child of twelve and suggest the order in which they should be read: Holland, England, The United States.

6. What has been your experience with children in regard to animal stories? Have you found that they prefer stories of the type of Wild Animals I Have Known to those in the Jungle Book, or vice versa?

7. Examine Tappan's Letters from Colonial Children. What is your opinion of the value of this book? Do you think it would interest children and make the history of the colonies more vivid to them? Read selections from it to a class of children.

8. What books on nature written for adults have you found that children enjoy?

9 Read or examine Abbott's Mary Queen of Scots; Tappan's In the Days of Queen Elizabeth; Henning's Maid of Orleans; Lang's Joan of Arc. What do you think the strong points of each one? For children of what age do you think each suitable?

10. Read *The Medieval Boy* (Chap. 8, in Stuart. *The Boy Through the Ages*), *The Training of a Squire* (Chap. 4, in Power. *Boys and Girls of History*), *Page, Squire and Knight* (Chap. 1, in Tappan. *When Knights Were Bold*). Which do you think presents the best picture of the period? Which do you think will be the most interesting to children? For what age do you think each suitable?

11. Look up the early Egyptians in Van Loon's *Story of Mankind*, Mills's *Book of the Ancient World*, Hodgdon's *The Enchanted Past*, Hillyer's *Child's History of the World*. Which two would you select as most useful in making that period interesting to children of 11 and 12? Why?

Chapter XXII

ILLUSTRATIONS OF CHILDREN'S BOOKS

The Chap-Book Illustrations.—Before the beginning of the nineteenth century the books illustrated for children were few and far between. The eighteenth century chap-books, to be sure, with their quaint representations of Robinson Crusoe landing on an impossible cone-shaped island, his unfortunate companions, meanwhile, sinking in the waves in the foreground, their arms stiffly extended; of Robin Hood and Little John shooting at a perfectly wooden stag, resembling nothing so much as a hobby horse with horns, undoubtedly must have delighted the children of former days, whenever they fell into their hands, but they were intended primarily for grown people.

Goody Two Shoes.—Not until about 1765 do we find books which bear the marks of being written and illustrated expressly for children. In that year the famous *Goody Two Shoes* was published by John Newbery, of St. Paul's Churchyard, with illustrations: rough, crude woodcuts, to be sure, but interesting to children, and as Mr. Charles Welsh says in his preface to the Heath edition of this book, "dovetailed into the story, so as to form an inseparable part of it." A step in advance in the art of book illustration, for in the chap-books we frequently find the same woodcut used to illustrate totally different scenes.

The Bewick Books.—About ten years later were printed what are often spoken of as the Bewick Books. Thomas Bewick, famed for his *British Birds*, and whose achievements in wood-engraving so far surpassed anything hitherto done in that line, that he may be said to have revolutionized the art, found time, among his other labors, to illustrate several books which were designed for children. Among them is *A Pretty Book of Pictures for Little Masters and Misses*; or, *Tommy Trip's History of Birds and Beasts*. Its popularity is evident from the fact that fifteen editions of this work were published. Inspired by such lines as the following (attributed to Oliver Goldsmith), it is not surprising that the pictures should be popular:

“The Bison though neither
Engaging nor young,
Like a flatt’rer can lick you
To death with his tongue.”

Select Fables of Æsop and Others, published in 1784, illustrated by Thomas Bewick and his brother John, was doubtless appropriated by the children, as Æsop still is, but a book more interesting to us from our present point of view, because intended primarily for children is *The Looking Glass for the Mind*, 1792 (an adaptation of the French book called *L’Ami des Enfants*), with cuts by John Bewick. In this we find truly delightful pictures of “Little Adolphus” out walking with Mamma, of “Little Anthony” in lace collar and tiny coat-tails, standing on a straight-backed, old-fashioned chair to examine, with interest, what appears to be a large thermometer, and of other exemplary infants. The interior scenes in these pictures are really charming, and must have de-

lighted children, who like the feeling that they are getting inside a house ¹ John Bewick also illustrated a number of other books for children, and his cuts, Mrs. Field tells us, "are typical of a great number of the illustrations that decorated the children's books of his day and of the first fifteen or twenty years of our century."²

William Blake.—In 1787 came an event of real importance in the history of illustrated books for children, the appearance of the *Songs of Innocence*, written and illustrated by William Blake.

Tales from Shakespeare.—In 1807, *Tales from Shakespeare*, by Charles and Mary Lamb, were published, illustrated with twenty plates designed by Mulready and engraved by William Blake. The *Tales* were published by William Godwin, famous as author of *Political Justice*, during the time, when, on advice, and with the active co-operation of the second Mrs Godwin, he was carrying on the business of a book-seller and publisher. These plates were evidently not made for children, but were pressed into service, and selected by Mrs Godwin, for whom Lamb entertained a cordial dislike. In the *Letters of Charles Lamb*, edited by Alfred Ainger, we find Lamb expressing his opinion of these plates to Wordsworth, as follows: "We have booked off from Swan and Two Necks, Lad Lane, this day (per Coach) the *Tales from Shakespeare*. You will forgive the plates, when I tell you they were left to the direction of Godwin, who left the choice of subjects to the bad baby (a familiar nickname for Mrs. Godwin), who from mischief (I suppose) has chosen one from ————— beastly vul-

¹ For reproductions of some of the illustrations in the *Looking glass for the mind*, see White, *Children's books and their illustrators*, p. 7

² Child and his book, p. 302

garity (vide. *Merch Venice*) where no atom of authority was in the tale to justify it; to another has given a name which exists not in the Tale, Nic Bottom, and which she thought would be funny, though in this I suspect *his* hand, for I guess her reading does not reach far enough to know Bottom's Christian name; and one of Hamlet and grave-digging, a scene which was not hinted at in the story, and you might as well have put King Canute the Great, reproving his courtiers. The rest are giants and giantesses" And he closes with, "So much, only begging you to tear out the cuts and give them to Johnny, as 'Mrs. Godwin's Fancy'!!" The editor adds in a note that the illustration to the *Midsummer Night's Dream* bore the title, "Nic Bottom and the Fairies," and that "in spite of Lamb's objection to this latter, it is by far the best of all the illustrations, both in design and drawing, and indicates very clearly the hand of Blake."³

This somewhat peppery outbreak on the part of Lamb shows that he for one felt strongly on the subject of illustrations for children, and makes us long to know what he would have said of the modern illustrated editions of the *Tales from Shakespeare*. Even if the pictures did not always suit his fancy, he would no doubt appreciate the care and pains which artists spend in trying to make illustrations worthy to be associated with the *Tales*.

The Paths of Learning.—In 1820 there was published by Harris and Son, a volume entitled, *The Paths of Learning Strewed with Flowers; or, English Grammar Simplified*. From the illustrations in this book, Mr. Gleeson White, in his *Children's Books and Their Illustrators*, suggests that Miss Greenaway drew her inspiration.

³ Letters of Charles Lamb, ed by Alfred Ainger, n.d., v 1, p. 241-42.

Cruikshank.—In 1824 appeared the first series of Grimm's Popular Stories, illustrated by Cruikshank, followed in 1826 by the second series. When we look at reproductions of these droll, spirited and altogether inimitable etchings, we wonder if, after all, the present day illustrators of Grimm have not been wasting their labor; although, there are, to be sure, several recent sets of pictures for Grimm, which we should be reluctant to give up

Richard Doyle.—Another artist who drew elves and fairies with great success, and is naturally mentioned with Cruikshank, though somewhat later in date, is Richard Doyle, perhaps even better known for his famous cover design for *Punch*, than for the numerous children's books which he illustrated. The circle of dancing, climbing, swinging elves which furnish a background for grotesque Mr. Punch and his dog Toby, shows with what spirit and skill this artist could depict the "little people."

Many more titles than those mentioned here should be enumerated in order to give anything like a complete history of children's illustrated books up to the beginning of the Victorian Period. Those cited, have seemed, on the whole, the most interesting and noteworthy examples. Besides these, however, there was a large number of books in which the illustrations were looked upon merely as a necessary adjunct to the text. They show little artistic ability and betray the fact that the illustrators were not really interested in making an appeal to children.

Summerley's Home Treasury.—Somewhere about 1844, however, a series of books was published by Mr. Joseph Cundall, called Summerley's Home Treasury, originated by Sir Henry Cole, the founder of the South

Kensington Museum, whose pseudonym was Felix Summerley. Most of the books in this series are now forgotten; the important thing for us to notice is this statement in the prospectus (quoted by Mr. White in his *Children's Books and Their Illustrators*): "All will be illustrated but not after the usual fashion of children's books, in which it seems to be assumed that the lowest kind of art is good enough to give first impressions to a child. In the present series, though the statement may perhaps excite a smile, the illustrations will be selected from the works of Raffaele, Titian, Hans Holbein, and other old masters. Some of the best modern artists have kindly promised their aid in creating a taste for beauty in little children." This series seems a bridge from the period when chance had a good deal to do with the illustrations for children's books, to the modern period, when we find a careful catering to the taste and understanding of the child.

Later Illustrators.—From now on there lies before us a delightful succession of illustrations for children. The earliest group of names which stands out consists of Kate Greenaway, Walter Crane and Randolph Caldecott.

KATE GREENAWAY.—None of us need any introduction to Miss Greenaway. Her quaint formal gardens, her dainty, mob-capped, little maids on the daisy-sprinkled turf; the laughing babies held by older maidens in graceful, short-waisted gowns; the proper little boys, in their wide collars, are all as familiar to us as though they were part of our actual experience. The soft tints suggest the Spring of the English poets and the pictures are full of the joyousness of happy-hearted childhood.

CALDECOTT.—Randolph Caldecott is an illustrator of a more robust type. His best known work consists of

the series of sixteen picture books, including *The Diverting History of John Gilpin*, *The House That Jack Built*, *The Three Jovial Huntsmen*, and others. Here we have life in Merrie England, depicted with a breezy, out-of-doors atmosphere and a rollicking spirit of fun. His pictures have the minute detail which children love, and show an irresistible sense of humour.

WALTER CRANE.—Walter Crane's illustrations are always decorative in effect and some people think them confusing for children. Others, while admitting this decorative and formal quality, maintain that with it Crane combines other characteristics which make him particularly appealing to children. Mr. White says of him, "he is the true artist of fairyland, because he recognizes its practical possibilities, and yet does not lose the glamour which never was on sea or land." It is true of him as of Arthur Hughes that "his work is evidently conceived with the serious make-believe that is the very essence of a child's imagination." Mr. G. K. Chesterton recognizes this same taste in children, when in criticising another artist, in the *London Nation*, he speaks of "a certain mixture of solid impossibility and exact detail which is the thing children love most." Crane's Picture Books are very popular, at any rate, in the libraries and are soon worn out by eager little readers. His *Baby's Opera*, *Baby's Bouquet*, and *Baby's Own Æsop* are also well known. The *Grimm's Tales*, illustrated by him, are deservedly popular and there is a nobility and idealism about his illustrations for Hawthorne's *Wonder Book* which make us glad to put it into the hands of children.

Other Illustrators.—A very delightful, though less famous illustrator, is Arthur Hughes, best known for his pictures in George MacDonald's *At the Back of*

the North Wind, The Princess and the Goblin, Gutta Percha Willie, and others. Reprints of these are now published by Blackie in England, and in the case of one of them, The Princess and the Goblin, the Lippincott reprint contains the original wood engravings as well as new illustrations in color by Maria Kirk. It was Mr. Hughes who made most of the pictures for the first illustrated edition of Tom Brown's School Days, and he also is responsible for the attractive illustrations in Christina Rossetti's Sing Song.

Another of the older illustrators whose work had great charm is "E. V. B.," otherwise known as the Hon. Mrs. Boyle. It is a pity that her work should be so little known nowadays. Her Child's Play was first printed in 1858 and reprinted in the '80's, but neither it nor the Andersen Fairy Tales with her illustrations are now in print. Her pictures have a unique charm which it is hard to analyse. There is a naive simplicity about them and a quality which one is tempted to call tangible. We feel sure that we could pick up her charming, round babies, or walk into the delightful kitchen pictured in the Ugly Duckling, and with all this there is a distinct strain of poetry.

Tenniel's immortal Alice and her delightful train are too well-known to need mention.

Boutet de Monvel's Joan of Arc is a book which every child should know. In this volume there are drawings not only full of life and perfect in detail, but at the same time so simple that even very little children enjoy them. There is, also, animating these drawings, the spirit of hero-worship for one of the noblest and most romantic figures of history and one which is very appealing to children. Of Boutet de Monvel's drawings for children,

William Downs says in his *Twelve Great Writers*: "The drawings of children made by Boutet de Monvel for juvenile books are marvels of naturalness. In them are seen types of every imaginable sort of youngster under the sun except the type of precocity and pedantry. They are charming because they are so human, genuine and care free. The present generation of French children, brought up on such wholesome and exhilarating pictures as these, may well be envied."

Present Day Illustrators of Children's Books.—Coming down to the immediate present, we are overwhelmed by an embarrassment of riches. The names of a dozen delightful illustrators of children's books might be mentioned offhand and they would by no means exhaust the list. But unfortunately not all of the illustrations designed for children's books reach the high grade maintained by the work of these artists.

Dangers in Illustrated Books for Children.—The flood of illustrated juveniles each year gives rise to several dangers. The first and most obvious is that mediocre and worthless text may float by means of its illustrations; second, that pictures of a quality more or less suggestive of the comic supplement, may be countenanced; and third, and most difficult to discern, that pictures, which, perhaps thoroughly artistic in themselves, but conceived from the adult's rather than the child's point of view, may be approved and accepted.

The first and second difficulties confuse the parent or friend anxious to find a suitable Christmas gift more than the teacher, and these friends and parents often only need to have the really good book brought to their notice to make them realize the difference between Foxy Grandpa and Clean Peter; or between Buster Brown

and the Book of Cheerful Cats by J. G. Francis, to cite an example which certainly rivals Buster Brown in popularity

With the awful warning before us of the Comic Supplement, and its disheartening popularity if admitted by some mischance to the Children's Room, one would suppose the second danger might be easily avoided. Such, however, is not the case. Now and again a book appears which appeals to us by the bright coloring, the simplicity of the pictures; it seems sure to be popular with the children, and, indeed, too often proves so, and we are blind to the slight lowering of tone, the touch of vulgarity. This is the more likely to happen when the book is a nursery classic in which a certain amount of exaggeration is customary and permissible. Such a book is *Mother Goose*, edited by Jerrold and illustrated by Hassall (published by Dodge in 1909). The collection of rhymes is good and comprehensive, but it is hopelessly marred by the illustrations, the full-page pictures are almost without exception highly objectionable in tone as well as crude and staring in coloring, and while those in black and white are better and some of them clever, even among these, examples of vulgarity and crudeness predominate. After looking at Bessie Bell and Mary Gray, who remind us of Mrs. Katzenjammer in the *New York World and Journal*, at Cock Crow, and the Man in the Moon, at the unpleasant caricature of Mother Hubbard, we wonder how any one could willingly put this book into a child's hands. The harsh colors and primitive lines are those of the modern cheap process; they lack both the depth of tint and the naive irregularity of impression which lent a certain charm and humorous individuality to the colored cuts in the old-fashioned books

for children. Though often crude caricatures, they were generally genial in quality, or, if they satirized an evil, it was with honest scorn and not with the leer that disfigures many of these modern drawings. As an instance of this we may turn to the illustrations in Dr. Hoffman's *Struwelpeter*. Published years ago, it still holds its own in the children's hearts, and rightfully, for here we find humour rather than horseplay, and a spirit of kindness rather than a sneer.

It is undeniable that for children the grotesque has a charm all its own, but it is only necessary to glance at Thackeray's *Countess Gruffanuff*, as she simpers and ogles behind her fan, in the *Rose and the Ring*, or at the expansive and resplendent *Bulbo* himself, to see how true humour never descends to vulgarity and commonness. Fortunately we need be at no loss for illustrated editions of *Mother Goose* rhymes which are free from offensive qualities. Kate Greenaway's dainty volume and the editions illustrated by Leslie Brooke and Arthur Rackham are delightful, while with the children, the more old-fashioned illustrations of the *Mother Goose Melodies*, edited by Wheeler, and published by Houghton, have as yet by no means been superseded.

Archaic Style in Pictures.—Children still like old-fashioned pictures, perhaps because they are not unlike the way in which they themselves try to represent an object, and for this reason pictures which imitate an archaic style are popular. Thus the *Pilgrim's Progress*, illustrated by the Rhead brothers (Century), is pored over until the pages fall to pieces; the Harper edition of the *Swiss Family Robinson* gains added popularity from its illustrations by the same hands. A charming example of this style of illustration is offered in Miss

Mulock's *Little Lame Prince*, illustrated by Hope Dunlap, and with the added attraction of excellent colouring. The companion volume, the *Pied Piper*, published in 1910, is equally successful. It is hard to choose between this and the edition with the Greenaway illustrations. On the other hand, Howard Pyle is an illustrator using the archaic method, whose pictures, delightful as they are, sometimes confuse children. This perhaps is because his treatment is often too complicated to be readily grasped by the child: he attempts to give a decorative effect rather than to present an individual hero. It is nevertheless good training for children to become familiar with these very charming and humorous drawings, though at first they may be less popular with them than more simple ones.

Childlike Quality in Illustrations.—The difficulty of discriminating, in books intended for children, between pictures which represent the child's point of view and those which are drawn from the adult's standpoint, is a far more interesting one. It is not only necessary to have artistic colouring and spirited drawing to make the ideal illustration for a child's book; a certain childlike quality of imagination is also requisite. If we think of the work of the three famous illustrators mentioned above, Kate Greenaway, Caldecott, and Crane, we see that it possesses this quality in a high degree.

An excellent example of recent illustrations which give local colour and atmosphere and yet maintain the child's point of view is found in the *Robin Hood Ballads*, illustrated by Lucy Fitch Perkins (*Dandelion Classics*), and published by Stokes. Those in a *Midsummer Night's Dream* in the same series are perhaps even superior in colouring and appropriateness. The draw-

ings in *The Children's Shakespeare* by Alice Spencer Hoffman are nearly all that could be desired and add much to its popularity. Walter Crane's picture books have already been spoken of. They have the advantage of combining picture books with the old favorites, *Cinderella*, *Puss-in-Boots*, *Bluebeard*, and others, of which the library can hardly have too many copies. Leslie Brooke is an illustrator who catches admirably the spirit of the old fairy tales, in his "Three Bears," "Golden Goose," "House in the Wood," and others, and whose delightfully humorous drawings appeal particularly to little children.

A very successful book, from the point of view of its illustrations, is *Robinson Crusoe*, illustrated by E. Boyd Smith (Houghton, 1909). The pictures are well drawn, excellent in colouring, full of the detail which children love, and particularly satisfactory because of their appropriateness to the text. Mr. Smith's illustrations for *The Last of the Mohicans* (Holt), are equally successful. His *Farm Book*, published in 1910, is a thoroughly satisfactory picture book for little children, his *Country Book*, *Railroad Book* and *Seashore Book* are also popular.

N. C. Wyeth's illustrations in colour for Stevenson's *Black Arrow*, *Kipnapped*, *David Balfour*, and *Treasure Island* are full of an atmosphere of romance and adventure most appropriate to the text. His illustrations for Creswick's *Robin Hood* have caught so admirably the spirit of Sherwood that it seems a pity that they are joined with one of the least satisfactory versions of the *Robin Hood* tales. Louis Rhead's black and white illustrations for *Gulliver's Travels*, *Swiss Family Robinson*, *Treasure Island* and *Robinson Crusoe* are decorative and full of interesting detail.

One would suppose that in the illustrating of fairy tales and wonder stories artists would at once find themselves starting from the child's standpoint, but such is not always the case. While Rackham's illustrations for Grimm are sufficiently childlike, his Undine is the grown-up's rather than the child's water fairy. This may be an unfair example, since Undine is not primarily a child's book, but Maxfield Parrish's drawings in Eugene Field's *Poems of Childhood* are not all childlike or for children, and, indeed, it may reasonably be feared that the picture, "Seeing Things at Night," would terrify a nervous child. Perhaps because the *Child's Garden of Verses* is more truly in tune with childhood than Field's *Poems*, the illustrations for the former, by Jessie Willcox Smith in the Scribner edition of 1905, or those in the less expensive Scribner edition of 1909, are more appropriate for the children's room.

A series of illustrations which are almost perfect from this point of view are those in a book of fairy tales by Isabel Anderson, *The Great Sea Horse*. It is a pity that the stories themselves are but moderately successful for the pictures are exceptional, being not only beautiful in colouring and spirited in drawing, but representing just what a child sees, or wishes to see. The Great Sea Horse as he rolls in from the waves, the Moon Baby as he frisks down the path in a ray of moonlight, the fairy who hovers over the water lily cup, are such sights as a child has seen or made believe to see. A delightful little volume, not so well known on this side of the ocean as it deserves to be, which admirably catches the spirit of a child's "let's pretend," is Maurice Baring's *Forget-me-not and Lily of the Valley* (Nisbet). The illustrations are full of original fancy and delicate touches of humour.

F. D. Bedford's pictures for Peter and Wendy, by Barrie, Lucas's Old-fashioned Tales, Forgotten Tales of Long Ago, and Another Book of Verses for Children, Dickens' Magic Fishbone, and The Cricket on the Hearth, show this illustrator equally at home with fairies, children and the England of an earlier day. Just as W. Heath Robinson has caught the fantastic humour of De La Mare's Peacock Pie, so Dorothy Lathrop presents the more eerie quality of the poems in the same author's Down-a-Down-Derry. Her fairies in the new edition (Harper) of Mopsa the Fairy, that old favorite by Jean Ingelow, are credible as well as attractive denizens of Fairyland.

Edward H. Shepard's drawings for Milne's When We Were Very Young and Winnie the Pooh are remarkable not only for their own humorous charm but because of their perfect harmony with the text. It is impossible to think of one without the other. The illustrations in black and white and in colour by Maud and Miska Petersham have a lively quality and a sense of fun, notably in Poppy-seed Cakes by Clark. Pamela Bianco, whose first book (Flora; a Book of Drawings by Pamela Bianco, with Illustrative Poems by Walter De La Mare. Heinemann. 1919), was done when she was a child of twelve, has in her work an archaic, child-like quality which appeals to most adults and to some children. The striking and unusual drawings of Boris Artzybasheff, while beautiful and highly decorative, will probably prove more interesting to the adult than to the child. Peppi the Duck, written and illustrated by Rhea Wells, furnishes an excellent example of illustrations that are thoroughly child-like in tone and full of a quiet humour.

As a test of the childlike in illustrations for the won-

der story nothing is better than to turn back to Tenniel's ever delightful drawings for Alice in Wonderland, and Through the Looking Glass, and to recall our own delight over the Duchess, the Cheshire Cat, slowly vanishing and ending with the grin, and Alice herself, struggling to adapt her varying sizes to her surroundings. These have the child's point of view, the child's humour, and a clean and wholesome caricature, and, it is to be hoped, will never be supplanted by the more burlesque and grown-up illustrations of Peter Newell.

PICTURE BOOKS AND ILLUSTRATED EDITIONS

Mother Goose

- Mother Goose melodies; ed. by W. A. Wheeler, Houghton. \$2.50.
 Delightful old-fashioned woodcuts.
 Nursery rhyme book; collected by Andrew Lang and illus. by Leslie Brooke. Warne. \$2 50
 Mother Goose; or, The old nursery rhymes, illus. by Kate Greenaway. Warne. \$1.00

Contains 44 rhymes

Only true Mother Goose; introd. by Edward Everett Hale. Lothrop. .75.

Facsimile of the edition published in Boston in 1834.

Mother Goose; the old nursery rhymes, illus. by Arthur Rackham. Century. \$3 50.

12 illustrations in color, more than 60 in black and white.

Book of nursery rhymes; being Mother Goose's melodies arranged by Charles Welsh. Heath. .76

The little Mother Goose; illus. by Jessie Willcox Smith. Dodd. \$1.50.

The real Mother Goose, illus. by Blanche Fisher Wright. Rand. \$2.00.

PICTURE BOOKS

Adelborg, Ottilia. Clean Peter and the children of Grubbylea. Longmans. \$1.50

Æsop. Fables, a new translation by V. S. V. Jones, with an introd. by G. K. Chesterton, and illus. by Arthur Rackham. Doubleday. \$3.50.

13 colored plates and many black and white drawings.

Æsop. Baby's own Æsop by Walter Crane. Warne \$1.50.

Baker, Margaret. The black cats and the tinker's wife; illus by Mary Baker. Duffield. \$2.00.

A story with something of the pleasant flavor of an old folk tale and delightful silhouette illustrations.

Baring, Maurice. Story of Forget-me-not and Lily of the valley. Nisbet. o p

Bianco, M. W. The skin horse; illus. by Pamela Bianco. Doran. \$1.50.

Bodkin, Thomas. A guide to Caper; pictures by Denis Eden. Doran. \$2.00.

Pictures of a make-believe town and its inhabitants

Boutet de Monvel, L. M. Joan of Arc. Century. \$4.00.

Brooke, L. L. Johnny Crow's garden; Johnny Crow's party. Warne. \$1 75 each. Golden goose book. Warne. \$3 00.

Contains Golden goose, Three bears, Tom Thumb. Each story is sold separately in paper. Also the first two bound together and the last two bound together.

376 THE USE OF BOOKS AND LIBRARIES

- Browning, Robert. *Pied Piper of Hamelin*, illus. by Hope Dunlap Rand. \$1.50
- Browning, Robert. *Pied piper of Hamelin*; illus. by Kate Greenaway Warne \$2 50

Van Loon, H. W. *History with a match*, being an account of the earliest navigators and the discovery of America. McKay. \$3 00.

Wyss, J. D. *Swiss family Robinson*; illus. by Louis Rhead. Harper. \$1.75.

Young, Ella. *The Wonder Smith and his Son*; illus. by Boris Artzybasheff. Longmans. \$2 25.

Zeitlin, Ida. *Skazki; tales and legends of old Russia*; illus. by Theodore Nadejen. Doran. \$5.00.

LITERARY MAPS.

A number of literary maps have been published during the last few years, perhaps none more imaginative and artistic than Bernard Sleight's *The Anciente Mappe of Fairyland* (Dutton. \$6 00). Other interesting and satisfactory maps are *The Map of Adventures, Stories, Trails, Voyages, Discoveries, Explorations and Places to Read About for Boys and Girls*; and, *The Booklover's Map of the British Isles*, both by Paul M. Paine (Bowker. \$2 50 each), Macdonald Gill's *The Wonderground Map of London Town* (Westminster Press. London. \$1.50), and Alice York's *A Child's Map of the Ancient World*; designed by Ilonka Karasz (Day. \$1.50). There is also a very charming *Mother Goose Panorama*, by Luxor Price, published by Stokes at \$7.50.

EXERCISE.

1. Name an illustrated book which you have found to be very popular with little children. What do you think are the elements in its pictures which appeal to children?
- 2 Look over the editions of *Mother Goose* listed at the end of the chapter. Which do you think most suitable for children? Which do you personally like best?
3. Mention an instance in which you have found humour in illustrations appreciated by children.
4. Examine the *Robinson Crusoe* illustrated by Louis Rhead (Harper), and the one illustrated by E. Boyd Smith (Houghton). Which do you think children would prefer? Show both editions to the same group of children and note their preference.

5. Mention several books which might be used as substitutes for the Comic Supplement.

6. Do you find that children over twelve are much interested in the illustrations in their books? Have you ever found that a book little used by the children becomes popular through an attractively illustrated edition? If so, cite the instance.

7. Mention a book for children (other than those cited in this chapter) in which it seems to you that the illustrations are not childlike in tone.

8. Mention three illustrated books which you would suggest for a High School Library for the sake of the value in artistic training which familiarity with their pictures will give.

Chapter XXIII

CHOICE OF EDITIONS; CHILDREN'S MAGAZINES; SOME LISTS OF CHILDREN'S BOOKS

Choice of Editions.—Too little attention is paid, as a rule, to the form and appearance of the books we would have children read. The cover, the pictures, the very look of the page, influence a child in his choice of a book. "What is the use of a book without pictures and conversations?" thought Alice in Wonderland, and many other Alices have thought the same thing. Any teacher may easily try the experiment of putting two different editions of the same book in the classroom library. The little dull colored, small type Robinson Crusoe with a text-book air, will stand on the shelf, while the edition with a bright cover, large type and plenty of pictures will be snapped up at once as a desirable prize. Children's librarians will tell you of the little used book, that on returning from the bindery in a fresh red cover, starts out on a career of popularity. Cover and pictures alone will not make a book popular, but a dull looking exterior will certainly cause many a treasure to lie undiscovered.

Beautiful Books Cultivate the Artistic Sense.—Grown-up people who frequently read a novel with scarcely a glance at the illustrations, forget how much pictures mean to the child. Good illustrations are one of the few means at our command to-day, to cultivate

something of artistic appreciation in the great mass of children. The fine, large, illustrated editions, such as those listed in the foregoing chapter, are expensive it is true, and we cannot afford to have even all the classics for children in that form; but one or two such volumes should be in every classroom library, that the children may have an opportunity to know what a fine and beautiful thing a book may be.

School Series.—There are several excellent series, published with supplementary reading in view, such as Houghton's Riverside School Library; Heath's Home and School Classics; Ginn's Classics for Children; and the American Book Company's Eclectic Readings. They are durably bound, well printed on good paper, and frequently illustrated. In buying school and classroom libraries we shall include many books of these series, but a library furnished entirely with volumes of this character will certainly fail to interest the child.

Editions at Moderate Prices.—Books for boys and girls are now issued in a number of attractive, illustrated editions at prices which are at least not prohibitive, for example, The Riverside Bookshelf (Houghton. \$2.00), The Beacon Hill Bookshelf (Little, Brown. \$2.00), The Children's Classics (Macmillan \$1.75), Rhead's Illustrated Juveniles (Harper. \$1.75), The Washington Square Classics (Macrae-Smith. \$1.50), and The Golden Books for Children (McKay. \$1.50). Macmillan's Little Library at \$1.00 contains many much needed titles among the books for younger children and is well illustrated and durable. McKay publishes the Newberry Classics, also mainly for the younger children, at \$1.00. Scribner issues a substantial series with colored pictures called Scribner's Series for Young People, at \$1.00;

Dodd, Mead's International Classics (\$2 00) includes books for the older boys and girls.

Help in Selecting Editions for Children.—A brief list of good illustrated editions is given on pp. 378-81, and help will be found in the Lists of Children's Books given in this chapter. Miss Olcott in her *Children's Reading*, (pp. 343-47), has a section on Selecting Editions, the Booklist (American Library Association) publishes from time to time information about new editions and series, and Edwin M. Pfutzenreuter's *Illustrated Editions of High School Classics* (University of Illinois Library School. 1925), is a very complete and useful list. The Carnegie Library of Pittsburgh publishes *Illustrated Editions of Children's Books: a Selected List* compiled by Elva S. Smith.

Children's Magazines.—There are practically no children's magazines to-day which merit serious consideration. *St. Nicholas*, which began publication in 1873, for many years maintained a high standard of excellence. Howard Pyle, Tudor Jenks, Mrs. Mary Mapes Dodge (who was its first editor) and many other well-known names are found in the list of contributors. *Rikki-tikki-tavi* and others of the *Jungle Book* stories were first published in *St. Nicholas*. The illustrations in *St. Nicholas* also were unusually good. Unfortunately in late years it has lost its literary quality and individuality; neither text nor illustrations have the distinction which formerly made *St. Nicholas* unique as a magazine for children. (Century Co., New York. \$3.00 a year, published monthly.)

The *Youth's Companion* is another magazine of long standing. It began publication in 1827 and has enjoyed great popularity. It has now (1928) become a monthly

instead of a weekly and has changed its form so that it resembles the usual news-stand magazine. It still includes articles on current events, science, history, biography and anecdotes, as well as serials and short stories. There is a page of stories, rhymes and pictures for little children. (Perry, Mason and Co. Boston. \$2.00.)

Boys' Life is the official organ of the Boy Scouts of America. The stories though often mediocre are wholesome in tone.

Adult Magazines Enjoyed by Children.—The Golden Book Magazine of Fiction and True Stories That Will Live, which reprints worth-while stories and poems by writers of this and other days, is much liked by the boy and girl of high school age. Far better for children than the reading of any magazine published for them is an acquaintance with Punch, the English magazine of humour, and access to a file of its bound volumes. Punch makes a strong appeal to young readers, especially to boys, from ten to eighteen. In addition to reading the jokes and looking at the drawings they are, all unconsciously to them, gaining a knowledge of English life and ways and undergoing a certain contact with literature that none of our corresponding American publications supply. Many of the poems in Milne's "When We Were Very Young" appeared in Punch. Rose Fyleman (who wrote Fairies and Chimneys, and other volumes of verse) is a frequent contributor, as well as A. P. Herbert, Cicely Fox Smith, E. G. V. Knox, Anthony Armstrong, P. R. Chalmers, R. C. Lehmann and E. V. Lucas.

Popular Mechanics, Popular Science, the Scientific American, and Nature Magazine are popular with boys. It is doubtful wisdom to encourage more magazine reading than this on the part of children, since this is a

magazine reading age and children, as they grow older, are only too apt to acquire the habit of reading magazines and newspapers rather than books.

LISTS HELPFUL IN SELECTING CHILDREN'S BOOKS.

- American Library Association. Children's books; compiled by Jessie Gay Van Cleve. (In A. L. A. catalogue. 1926.)
- Children's catalog, a dictionary catalog of 4100 books with analytical entries for 863 books, compiled by M. E. Sears, based on Children's catalog of 3500 books, compiled by Corinne Bacon. Ed. 3, rev and enl. H. W. Wilson Co (Standard Catalog Series.) Consult publishers for price. Yearly supplements. There is an edition for smaller libraries which includes only 1200 titles Too comprehensive for a guide in selection. Valuable for its annotations and subject index.
- Gardner, E. E and Ramsey, Eloise Bibliographies (in their Handbook of Children's literature. 1927. p. 200-85).
- Hunt, C. W The first 300 books for the children's library. Univ. of the State of New York 1925.
- Leonard, S. A Reading for realization of varied experiences for the primary and intermediate grades and the Junior and Senior high school. Lippincott. 35 cents. (Appendix 2 of his Essential Principles of Teaching Reading and Literature Lippincott 1922.)
- Mahoney, B. E. Books for boys and girls, a suggestive purchase list. Ed. 3, revised Bookshop for Boys and Girls. Boston 1922 (o. p New edition in preparation, to be published by Doubleday)
- Prepared by the Director of the Bookshop for Boys and Girls, Women's Educational and Industrial Union, Boston, Mass.
- Pittsburgh. Carnegie Library Annotated catalogue of books used in the Home Libraries and Reading Clubs conducted by the children's department 1905. 25 postpaid
- Pittsburgh. Carnegie Library. Catalogue of books in the children's department 1920. \$2.00 postpaid.
- Includes about 3300 books. See note under Children's catalog.

Toronto Public Library Boys' and Girls' Division. Books for boys and girls, being a list of 2000 books which the librarians of the boys and girls division of the Toronto Public Library deem to be of definite and permanent interest, with annotations and descriptions. Boys' and Girls' House. Toronto Public Library. \$2.00 postpaid.

Includes list of reference books.

GRADED LISTS.

National Education Association. Elementary School Library Committee Graded list of books for children Chicago American library association. 1922. \$1.25. (New edition in preparation)

Good annotated list. Section A. Grades 1-3, Section B. Grades 4-6, Section C Grades 7-9 Also gives a list of reference books for Grades 1-9, has a directory of publishers and a subject index.

Pittsburgh Carnegie Library. Catalog of books, annotated, arranged and provided by the Carnegie Library of Pittsburgh for the use of the first eight grades in the Pittsburgh schools 1907 .50 postpaid

Terman, L. N. and Lima, Margaret Suggestions for children's reading. (In their Children's Reading. Appleton. 1926 \$2.00.)

This book is based on an experimental study of the qualitative and quantitative aspects of children's reading and the authors give the ages for which they think the books are most likely to be suitable.

HIGH SCHOOL LISTS.

Brown, Zaidee, ed. Standard catalog for high school libraries, a selected list of 2600 books chosen with the help of educators and school librarians with added lists of pamphlets, maps and pictures. Part I, Classified List; Part 2, Dictionary catalog with entries under author, title and subject. H. W. Wilson. 1926-28. (Standard Catalog Series.) Consult publisher for price.

Most useful list for high school book selection. Books for first purchase are starred and books for junior and senior high schools are indicated. Good annotations.

Hartford Reading Lists. Holt. 1925. .35.

Illinois Association of Teachers of English. Guide to reading, annotated by High School Boys and Girls. Urbana (Illinois). .10.

National Council of English Teachers. Committee on Home Reading. Books for home reading for high school and Junior high school, graded and classified. National Council of English Teachers. Chicago 1923 .15.

PART III

THE ADMINISTRATION OF SCHOOL
LIBRARIES

Chapter XXIV

ORGANIZATION OF A HIGH SCHOOL LIBRARY

In chapter one the history of school library development is briefly outlined and the different types of organization and control are indicated. This chapter discusses the needed equipment, personnel, and annual appropriation for the administration of a high school library.

Housing and Equipment.—The Reading Room.—In the architect's plan of the school building, the library should receive careful thought, and adequate quarters should be provided at the outset. In the case of old school buildings where no provision has been made for a reading room some part of the building should be remodelled and made suitable for a library. This room in both new and old buildings should be near the study hall and large enough to seat from 10 to 25 per cent of the school's enrolment, an area of 25 square feet per reader being required for adequate service. There should be plenty of natural light and the artificial lighting should be of the semi-indirect type. The floor should be covered with cork carpet or a good quality of linoleum to reduce noise. Shelves should line the available wall space around the room.

Other Rooms.—For the librarian there must be a work-room, with a lavatory and hot and cold water, storage closets, typewriter and desk, shelving, a work table and

a book truck, this room connecting with the reading room. A classroom or conference room equipped with necessary chairs, table and stereopticon for the use of groups using special books and illustrative material is a necessary adjunct to the modern high school library

Furniture.—Standard furniture, including adjustable shelving, tables, and chairs, filing and display cases, a magazine rack, bulletin boards, and a special desk for the circulation of books, must be bought for the reading room. This equipment is manufactured by library furniture houses whose experts will submit a lay-out for equipping the school library. For floor plans and furniture needs, the references cited at the end of this chapter are important and should be consulted

Supplies.—Besides furniture, special supplies are needed to prepare the book collection and other material for circulation and reading room use. Library supply houses have standardized these supplies for school libraries and the librarian should consult the catalogues of such manufacturers to estimate the needs and cost of supplies required. See end of chapter.

Librarian and Staff.—Even with sufficient funds for equipping a reading room and buying books, a library can be of no great value to a school without the appointment of a librarian who has been professionally trained for a school library position. Library schools now give highly specialized courses in School Library Service for the purpose of training librarians for this distinctive branch of general library work. A high school library must be directed by such a trained person, if the book needs of the school are to be met adequately. In the larger schools, in addition to the chief librarian, a trained assistant is necessary for every five hundred pupils in

daily attendance, to assist in the reference work and in the technical and clerical tasks.

Duties.—The work of the librarian falls into three divisions. (1) Administrative work; (2) Technical work; (3) Educational work.

Under *administrative work* the duties are: guiding the policy of the library; planning the room and equipment; planning the annual budget and keeping the record of expenses; selecting and buying books, building up a collection of pamphlets and illustrative material; directing the work of the assistants.

The *technical work* of the library is done by the librarian and staff together and consists of the following: classifying, cataloguing, indexing and making available for use all printed matter; organizing a practical charging system for keeping track of all books and other material loaned from the library; preparing all magazines for binding and books for rebinding and keeping the collection of books in repair; and keeping the necessary records and statistics of the library.

The third duty—*educational work*—is the outcome of the efficient performance of the first and second duties and its results are best measured by the service actually rendered the school.¹

Service.—To Faculty.—With a well equipped, well organized library, functioning as a regular department of the high school, the professionally trained library staff aids the teachers in important ways: (1) *Notifies of new books*, interesting magazine articles, etc., either on a special faculty bulletin board in the library, or by an individual notice, or by giving a five-minute talk at faculty

¹ See National Education Association. Report on Standard Library Organization for Secondary Schools. 1918.

meetings, (2) *Puts books on reserve* for use of classes, (3) *Borrows from other libraries* books and other material not in the school library, (4) *Meets individual classes* in classroom of a teacher for a co-operative lesson on the use of the library e g, 9th grade History; (5) *Arranges special shelves or alcoves* for teachers to display educational books and magazines

To Pupils.—The service to students in the school is in general the following. (1) *Reference work*, guiding the student in looking up subjects; (2) *Library lessons* on bookmaking, the use of books and libraries, and training in the making of bibliographies; (3) *Guidance in reading* for school and home; (4) *Extra-curricular activities* book service in club-work, debating, the school paper, etc; (5) *Vocational guidance* by means of a collection of the best books, pamphlets and other references on occupations, etc

Rank, Salary and Tenure.—The librarian and trained assistants on the staff should have the same rank, salary and tenure of position as the teaching force, the librarian's position being equal to that of the head of the English department, the assistant's position corresponding to that of an assistant on the teaching force.

Appropriation and Budget.—An annual appropriation for the library must be scientifically arrived at and, after the total has been decided on, that amount carefully budgeted to insure the best all-round service to the school. The salaries of the librarian, staff, and student assistants are properly charged against the general salary account of the school; such items as heat, light, insurance and janitor service belong on the general school account.

The library budget proper must include the following items: (1) Books; (2) Periodicals; (3) Binding; (4)

Supplies; (5) Contingent fund; (6) New equipment, One of the most important duties of the librarian is to estimate the amount needed each year for this library appropriation. For *books* the national standards set up a minimum of \$1.00 per student per year. For periodicals the amount needed will depend on the number and selection of magazines and their total annual cost. A school with an attendance of one thousand pupils will need a minimum of \$100.00 a year for periodical subscriptions. For *binding* the amount will be determined by the number of volumes of magazines to be bound each year plus the average number of books that must be rebound. Only those magazines which are indexed in the periodical indexes should be bound. It is well to allow from 85 cents to \$1.00 and \$1.50 per volume for the binding of magazines. The average cost of rebinding a book of ordinary size is from 65 to 75 cents a volume. From these figures, the librarian can estimate the cost of binding for a year. For *supplies* a minimum allowance of \$50.00 is none too much to cover the cost of the following items. accession book, catalogue cards, book cards, book pockets, etc., for the charging system, mending supplies, magazine covers, rubber stamps, gummed letters, mounting board, lettering ink, etc., for making signs and other necessary materials.

A *contingent fund* is necessary, if the librarian is to take advantage of second-hand buying to save money, and is to solve the emergency needs that other funds cannot take care of. From \$25 to \$50 is a fair estimate for this item.² For *new equipment* the amount will vary each year, but a look ahead is important and if any likely

² Winton, Grace. Preparation and content of the high school library budget. Detroit journal of education, June 1923, v. 3, p. 439-441

need is to arise provision should be made for it beforehand.

After these funds and their amounts have been decided upon, the important matter of apportioning the fund for books among the several departments of the school must be settled. After estimating the number of pupils studying a subject, say, English or Chemistry or Civics, recording the amount of collateral reading required in that subject and the number of copies of a single book (one copy to every seven pupils) needed to fulfill that requirement, an entirely satisfactory solution has still not been reached, of how much of the book-fund should go to buying books for the English or the Chemistry or the Civics departments. The cost of technical and scientific books is usually higher than the cost of books of general literature; on the other hand, the larger part of the up-to-date information in science is printed in magazines and not obtainable in books when most needed. To encourage reading and inculcate a love of good literature, attractive editions must be bought and they are expensive. So after considering all the objective ways of arriving at a fair proportioning of the book-fund, the librarian may still find other reasons for spending more money for the history department than for the biology or home economics departments. A library committee, representative of the various departments of the school, might well assist the librarian in apportioning the book-fund, and thus arrive at a solution that is fairest to the greatest number.

Standards.—No high school is giving adequate service to its community that does not provide a library commensurate with at least the "attainable standards" as laid down in the Certain Report, listed at the end of this

chapter. High schools of the first rank need to reach beyond that point and meet the full needs of a faculty and student body working under a re-organized curriculum with progressive teaching methods.

Chapter XXV

BOOK BUYING AND ORDERING

The question of the selection of books has been considered in another section; this chapter treats of the practical matter of (1) where to buy books, (2) prices, (3) what not to buy, (4) how to order. These are problems for the librarian in charge of the school library and no one else should be empowered to order books; neither teachers, nor the principal, nor superintendent, nor town clerk. Teachers and principals should advise with the librarian in regard to the selection of books; the superintendent or other official who has charge of the funds should pay the bills; but the librarian should be the final authority even to select from a state list. The librarian on the one hand knows the book needs of the entire school better than any one teacher or the principal could know them; and, on the other hand, the librarian knows book-prices and methods of buying and how best to apportion the library funds to meet the needs of the greatest number, better than any public official knows these things.

Where to Buy.—As a general practice it saves time and money to buy books from one firm, rather than scatter orders among various publishers. If a local dealer will give as good prices and service as firms in a book center like New York or Chicago, he should receive the book orders of the library. In comparing prices of the local dealer with other firms, it should

be remembered that transportation costs often equalize what seems a larger charge on the part of the local dealer. Unless the library gets equally good service from the local firm, no political pressure, nor any false patriotism, should force the library to buy at home. Perhaps something, however, should be sacrificed to the cause of good-will.

Do not buy books from a travelling agent, for it is very poor economy. Agents usually sell either subscription books, "books in sets," or de-luxe editions of well-known authors' works, and the school library is much better off without these books and cannot afford to buy them.

Publishers and Prices.—A knowledge of publishing firms and the character of the books they issue is essential if books are to be selected and purchased to the best advantage of a library. There is a list of some well-known American and English publishers at the end of this chapter, indicating the specialties of each, that may be useful to teachers and librarians

Prices of books may be found by consulting the U. S. Catalog, Books in Print, January 1, 1927, and the current numbers of the Cumulative Book Index both of which are published by the H. W. Wilson Company, New York City. From the prices listed there, the library should receive at least a ten per cent discount. All reliable firms are willing to give such a discount and on some books an even more liberal discount.

The librarian may be compelled to buy, by state contract, from a particular firm. If so, satisfactory service should be demanded and any failure on the part of the selling agent should be reported to the proper officials of the state and not charitably endured.

What Not To Buy.—Subscription books and new edi-

These cards, made of a cheap manila stock, can be bought of a local printer for \$1.75 per thousand; better stock can be had from the library supply houses for \$2 per thousand. Unprinted slips can be used instead.

After all the cards have been filled out, they should be arranged alphabetically by authors and a typewritten or hand-written list in duplicate should be made with this form of entry:

Richards, Mrs. E. H. Cost of Food. Ed. 2. N. Y. 1908. Wiley. \$1.

One list is sent to the dealer with instructions to ship by freight, express, parcel post, and the copy is kept on file in the library. The cards are filed alphabetically in a box marked "outstanding orders," or "order file."

When the shipment is received, the books should be arranged alphabetically on a table or book truck, compared with the order cards to see if the right edition, etc., has been sent and checked with the bill. The cost price and date of receipt should be entered on the order card. All cards so filled out may then be filed in a box marked "Books received" until the books have been catalogued. For the average school library with an order list made on slips, this "books received" file need be kept no longer than it is found of use. Some libraries use order cards for a shelf-list record; others for an accession record; and in such cases the order cards are arranged in a permanent file. The individual librarian will determine for herself which method is the best for her use.

When the receipted bill is returned it should be clipped to the order sheet and filed.

If librarians must buy from a state list and a special agent, directions for ordering as given in such lists, of course, must be followed.

PROBLEM.

1. Make out order slips and write an order for \$20 worth of books

2. If you have \$200 with which to begin a school library, would you buy an encyclopedia? If so, which one?

3 Look up prices of *The Children's Hour*, 15 v., Houghton; *Children's Library of Work and Play*, 10 v., Doubleday; and *Book of Knowledge*, 24 v., Grolier Society. Considering the quality, the quantity and the price of these publications, would you be justified in buying them for a school library that spent \$100 a year for books?

4. Make a careful examination of the official library list for the graded schools of your own state. Criticize it from the standpoint of the editions of children's classics it includes. Are they cheap editions or expensive ones? Can you justify the selection?

5. Select from the Standard Catalog for High School Libraries compiled by Zaidee Brown and published by H. W. Wilson, the most essential reference books for your library. You have \$250.00 to spend. Make out an order for the books.

Chapter XXVI

LIBRARY RECORDS

This chapter enumerates the records that should be kept in a high school library and describes the method and use of those records not considered in other chapters.

1. **Order Record.**—A record of books ordered, kept on cards or slips (see Chapter XXV).

2. **Accession Record.**—A numerical record of books as they are added to the library. In some large libraries this record is kept on order cards, but, when everything has been considered, the accession-book is the best form for the school library to use. The accession-book is a blank book ruled in columns and with numbered lines, for the particular purpose of recording library books. These books with more or less printing and with space for recording from 500 to 5000 books can be bought from any library supply house. Sheets to be used in binders and ruled for the accession record are also manufactured. The chief advantage of the sheets over the bound form is in being able to type-write the entries on sheets instead of writing them in by hand as must be done if a book is used. On the other hand the bound book is more secure than sheets in a loose-leaf binder.

When books have been received and checked with the order file and bill, they are then entered on the accession record, each book and each volume of a set on a separate line, with the same accession number written in the book. It is best to arrange the day's accessions by publishers

Figure 15

before beginning entry and in that way save writing. The form on p 410 explains clearly the method of work.

This record is of use in telling how many books the library contains, the history of each book — when received, from whom, whether a purchase or a gift, the cost, and when rebound, lost, stolen or worn out. In a small and slowly growing library this record is a substitute for a catalogue. At any time the exact number of books in the library can be found out by subtracting the number of books withdrawn, from the last accession number used. In very small libraries a well-bound blank book, ruled like this form, with lines numbered consecutively may be used.

3. **Shelf-list.**— Kept on cards. A record of the books as they stand on the shelf (see Chapter XXVIII)

4. **Catalogue.**— Kept on cards. A record of the authors, subjects, titles and often contents of all books in the library (see Chapter XXIX)

5. **Loan Record.**— Kept on cards. A record of books loaned should tell what books are out of the library, who has them, and when they will be due. This record should be accurately kept and it should serve the additional purposes of keeping the librarian informed of the nature of each student's reading, the character of books circulated, and the number. The following method is simple and accurate: In each book, except reference books and magazines, paste a book pocket 4 x 4 inches (see Fig. 18); in each pocket put a book-card 3 x 5 inches (see Fig. 17), on which have been written the author's surname, brief title, and call number, with three columns for writing date due, borrower's name, and date returned. For each borrower, make out a similar card (see Fig. 16), writing borrower's name inverted, on the top line, on the second

line his class in school, and on the third line his home address. The three columns should be headed *date due*, *name of book*, *date returned*.

Smith, John 11th Grade 504 Main Street		.04

Date Due	Name of borrower	Date Ret'd
5 O 14	John Smith	7 O 14

Figure 17

DATE DUE				
5 O 14				

Figure 18

When the book is in the library the book card is in the book pocket; when John Smith borrows it, the card is taken out and stamped with date due and John Smith's name written in; John Smith's card is stamped with the same date, and the name of the book written on it; the book pocket is stamped with the same date. The book card is then dropped in a drawer and John Smith's card is filed in its alphabetical place in the borrower's file. At the end of the day all the book cards in the drawer are counted by classes—100's, 300's, 700's, 800's, etc.—and the total circulation added up for recording on the statistics record; then they are arranged alphabetically by author's name or numerically by call numbers, and filed behind a guide card numbered with the date due. When John Smith returns the book, look in the book file under date due and remove the book card. Stamp on it date returned and put in the book pocket. Take John Smith's card from the borrower's file and stamp date returned. If the book is over-due, collect fines then or charge on corner of John Smith's card, before putting it back in the borrower's file. Some school librarians do not advocate a reader's card because of the additional time and cost involved, but the information such a card gives about a student's reading is well worth both time and cost.

Charging trays with manila guide cards for filing book cards and readers' cards are sold by the library supply firms and are not expensive. These trays should be kept on the librarian's desk if the library has no regular loan-desk.

6. Periodical Check-list.—Kept on cards. It is necessary to keep track of magazines as well as books. Periodicals are never entered on the accession record until

they have been bound, but they must be checked up regularly each day, or week, or month as they come. As it often happens that periodicals go astray in the mails, one cannot be sure that every number comes, and the check-list is the record that will tell. When the check-list indicates the non-arrival of periodicals within the month they are due, the librarian should claim the missing numbers from the publishers. Figures 19 and 20 illustrate check-list cards, one for daily and weekly periodicals, the other for monthly, quarterly and yearly magazines.

7. **Binding Record.**—When books for rebinding and magazines for binding are sent to the bindery some record of their whereabouts must be kept at the library. For the record of books it will be sufficient simply to remove their cards and charge them to the binder and file the cards in the loan file. For magazines the record should be made on the reverse of the check-list card thus:

Vol.	Sent	Binder	Cost	Ret'd	Remarks
19	1 J1 14	J. O. Brown	.60	1 S 14	

Figure 21

An alphabetical list of books and magazines should be sent to the binder with the order and a copy of the list kept at the library. When the books are returned they should be checked with this list and the binder's bill. The binding cost of magazines and the date of return should be entered on the reverse of the check-list cards; the binding cost of books and date of return may be pencilled in each book. The order sheets filed in a loose-leaf binder will give the information needed for the statistics record—that is, the number of books bound each

year and the cost of the binding. For small school libraries a simpler record will answer the purpose.

8. Statistics Record.—Kept on sheets or in a blank book. In a school library the most important phase of work is the use pupils make of the library—what they read and what reference use they make of the books. Circulation statistics by classes of books will show the type of books most used. No very accurate count can be made of reference use, if pupils are encouraged, as they most emphatically should be, to look up questions for themselves. Some idea may be had, however, if pupils are urged to note on a slip what subject they have looked for, and leave the slip on a file at the librarian's desk. Added to these slips, the number of questions the librarian looks up each day will give a fair idea of the daily reference use of the library. Besides statistics of circulation and reference use, the school librarian should enter on this record the number of books added and withdrawn, fines, receipts, disbursements, gifts, and books mended. These items should be added up daily, monthly, and yearly.

LESSONS.

1. Students should be given practice work in the College Library, in keeping these various records; if such practice is not feasible, assign work in accessioning to be done in a blank book ruled like the form on page 410. A simple loan system as suggested in this chapter can be put in operation and the pupils may learn to use it

2. Name the records that a high school library should keep, describing the method and use of each.

Chapter XXVII

THE CLASSIFICATION OF BOOKS

An orderly arrangement of things is an almost instinctive quality in every human being. The housewife in her kitchen, the merchant in his store, the teacher in his classroom, all arrange the material they handle in some kind of order that will make it more readily usable. The librarian's material, the things he has to use, are books. He not only has to use them himself, but what is more important, he has to make them usable to other people. It is necessary then to have an orderly arrangement of the books in a library. This practical process of arrangement for the purpose of use is classifying.

Principle.—How does the housewife place her kitchen utensils? How does the merchant group his stock? How does the teacher arrange his books, maps, apparatus, etc., to make them most useful? What determines this grouping? Is it the quality of *likeness* in the objects themselves? Is all red cloth put together on the dry-goods merchant's shelves, all black cloth, etc.? Does the cook arrange all her iron utensils on one set of hooks, all aluminum on another and all earthenware on another? Or is the quality of *likeness* that determines a useful classification something more than mere likeness of material or color? Is it not more useful to find all worsted cloth together, all silk cloth together, all pots together, pans together, baking-dishes together? Is it useful to

arrange all red books together, or all books bound in leather together, or all books of the same size together? To be sure, readers in a library sometimes ask for "the red book I was reading yesterday," or, "that big, brown, leather book I saw on the shelves," but such requests are not the usual form. To arrange books for that kind of a reading public would be folly. Intelligent people ask for books by the subject of the book, and so the quality of likeness that determines the grouping of books is the likeness of subject: books on United States history, books on botany. *Likeness of literary form* determines the grouping in some cases: e.g., books of poetry, essays, fiction.

Definition.—With the principle of likeness and the motive of use in book classification, we may state a practical definition as follows: The classification of books is the grouping of them together according to a likeness in subject or literary form, for the purpose of use.

Process.—There are three steps in the process of classifying books. (1) The first thing to do in classifying a book is to be certain you know what *subject* or subjects it deals with. To be certain, you cannot depend on the title to tell. If you do, you may find yourself in the predicament of the librarian who was confronted by a professor of geology, bringing from the shelves where books on his subject were grouped, Ruskin's *Stones of Venice*, which he laid on her desk as a rebuke to her carelessness. Nor is the table of contents always a sure guide. It is best to read the preface to find out what the author has attempted to do and, if his purpose coincides with the subject as listed in the table of contents, then you will probably be safe in concluding what the book has been written about. It may be necessary to

read portions, if not all, of a book to be absolutely sure you know the subject of it.

This first step is the most vital one in classification. It determines to which class of knowledge a particular book belongs: e.g., that Morris' *Historical Tales . . . Japan and China*, belongs in the History group of knowledge, of which Japan and China are subdivisions. Systems of classifying or grouping knowledge have been many and varied from the time of Plato and Aristotle, through the well-known "trivium" and "quadrivium" of mediæval education, the systems of Bacon, Coleridge, Comte and Spencer, to mention only a few, down to the present.

Notation.—(2) The second step in the process of classifying books is the application of the particular symbol in the classification scheme you are using to the book you are classifying: e.g., apply from the Decimal Classification system to Morris' *Historical Tales . . . Japan and China*, the symbol or *notation*, as it is called, that means Japanese history and you will give it the number 952.

Schemes for classifying books have been almost as numerous as the systems of classifying knowledge. Book classification is based on the classification of knowledge, but, in adapting theory to the practical task of grouping together books that deal with the same subjects, the logic and sequence of theoretical classification must sometimes be sacrificed. There must also be a system of symbols to represent the different classes and divisions of the schemes. This notation is either figures or letters or a combination of both arranged either decimally or integrally. Every sort of combination almost has been used in the many schemes that have been developed. The best known and most widely used systems in America

are the Dewey Decimal, the Cutter Expansive, and the Library of Congress systems. The schemes are based on logical groupings of knowledge, but in their practical working out have been modified. The notation of the Decimal system is figures used decimally; that of the Expansive system is letters; the Library of Congress a combination of both. An outline of the Expansive system will be found in the A. L. A. Catalog, 1904, and in Dana's Library primer, 1906; the outline of the Decimal system follows. You will see that it is based on a system that groups all knowledge into ten main classes, which in turn are subdivided into ten divisions each, and on into subdivisions.

¹ Reprinted from the Decimal Classification by permission of the publishers. Forest Press, Lake Placid Club, Essex Co., N. Y.

Subject Headings.—(3) The third step in the process of classifying a book is the assignment of one or more headings to it that will indicate its subject or subjects. We have classified Morris' Historical Tales . . . Japan and China, in *history* and the particular subdivision, *Japan*, and given it the decimal classification number 952. It is a physical impossibility for a book to stand in more than one place on the shelves at the same time, so there is no use assigning the number 951, which means history of China, also. We decide on 952 because Japanese history is the main topic of the book. The next step is to assign to this book the headings that will indicate it treats of the history of Japan and China. These headings are not written in the book as the classification, 952, is, but on catalogue cards to show the user of the library, who generally does not know the classification scheme, that there is a book on Japanese and Chinese history on the shelves.

Just as in step two the Decimal classification is used in assigning class numbers, so in step three it is necessary to use a guide in assigning subject headings. In stating a subject in words there is more than one way to do it. We may say *Japanese history* or *Japan. History*; *Country schools* or *Rural schools*, etc. This variety of form necessitates the choice of one particular heading for use and the sticking to it. Sears, M. E. List of subject headings for small libraries. (H. W. Wilson. 1926. 2d. ed. rev. and enl \$2.75) should be used as a guide and every time a heading is adopted for use it should be checked in this list to insure uniformity of subject headings in the catalogue. This guide, checked carefully, will keep you from entering some of your books under *Country schools* and others under *Rural schools*, and will force

you to choose one or the other heading and stick to it for the sake of certainty and uniformity in your catalogue.

Fiction and Biography.—Most libraries now arrange on the shelves all Fiction and the lives of individuals—Individual Biography—the first alphabetically by author, the second alphabetically by the name of the individual written about, and disregard such books as subdivisions of Literature and History. This is done because people ask simply for what novels a library has and for what lives of a certain person: e.g., “Which of Dickens’ novels have you in the library?” “What biographies of Lincoln?” The classification, therefore, is made to conform to the practical demand. It may be convenient to mark all fiction with the symbol F and all lives of individuals with the symbol B, but in many libraries it is now considered sufficient simply to arrange all novels on the shelves alphabetically by author without any marking of any sort.

Cutter Author Tables.—In chapter eight we spoke of grouping books alphabetically by the authors’ names after assigning class numbers to them. It is best to do this at the time of classifying a book, and it may be considered another step in that process. A very convenient scheme for arranging books alphabetically by the author’s name is a combination of a letter and figures as found in the Cutter Author Tables (Library Bureau, \$1.25). Take the example given above—Morris’ *Historical Tales . . . Japan and China*, and having classified it in 952 to stand on the shelves with all other books on *Japan. History*, we wish to arrange it alphabetically under the name Morris. Turn in the Cutter Tables to the name Morris or to the nearest group of letters to it and we find the combination M83. Writing the class number and the

author number thus $\begin{smallmatrix} 95^2 \\ M8_3 \end{smallmatrix}$ we get the call number of the book.

Summary.—The classification of books in a library is the grouping of them together according to a likeness in subject or literary form for the purpose of use. To do this requires a process of three steps: (1) to determine to what group of knowledge a book belongs, (2) to assign a classification symbol to the book itself; (3) to assign one or more subject headings to the book, which headings are written in the catalogue to indicate the contents of the library. For convenience of arrangement on the shelves, it is further necessary to use the Cutter Author Tables for alphabetizing the books in each class.

LESSONS.

At least ten lessons should be assigned in classification with thirty books for each assignment.

Chapter XXVIII

THE SHELF-LIST

We have defined the shelf-list as a record of the books as they stand on the shelves. This record is best kept on cards. Catalogue cards are used. Each book on the shelves is represented by a card in the shelf-list file, except books in sets and periodicals, where several volumes are entered on the same card.

When a book has been classified and the author number assigned, it is then ready to be shelf-listed and catalogued. The shelf-list card contains the call-number, the author's name inverted, a brief title and the accession number:

904 C91	Creasy, Sir E. S. Fifteen decisive battles. 225
------------	---

Figure 22

	391-3	v.1-3		

Figure 25

Figures 23 and 24 illustrate shelf-list cards for a book in more than one volume, and for a periodical. Figure 25, a shelf-list card for an individual biography.

As soon as the shelf-list card is made it is filed by its call-number in a box or catalogue drawer. This file of cards is constantly used by the librarian.

Uses.—It is a guide and check in assigning author numbers and must always be consulted before giving a Cutter number to a book in order to avoid using the same call number for two different books. It guides the librarian in future classification and guards against the error of classifying the same types of books in two or three different places. It is also used in taking an inventory.

Inventory.—In a school library an inventory should be taken during each summer vacation. One person can take an inventory, but it is more quickly done by two people, one reading the call-numbers from the books on the shelves; the other reading from the shelf-list cards. The shelf-list file is taken by boxes or drawers—in

whatever receptacle the cards are filed—to the shelves. When a card is read for which there is no corresponding book, the card should be turned up on edge in the box. When all the shelves have been read, the search should then be made for books that are missing. When the school opens again in the autumn, whatever books are still unaccounted for should be counted as lost. That fact with the date should be written on the shelf-list card and in the accession book, and on the statistics record. The catalogue cards should be removed from the catalogue file.

LESSONS.

Practice in shelf-listing is best given with the lessons in cataloguing. Each book catalogued should be shelf-listed at the same time. Practice work in taking an inventory can be given students in the college library and written reports of missing books should be handed in by each student.

Chapter XXIX

CATALOGUING

In chapter nine we discussed the card catalogue from the user's point of view; here, the subject is treated from the maker's point of view. How shall the librarian make a catalogue that will furnish those who use it the information they need to find what they are looking for? The cataloguer must first of all have enough technical knowledge and skill for the task; and second, she must have used catalogues sufficiently herself, to have the layman's attitude toward them.

If the student has used this text conscientiously, and has done sufficient practice work in the library up to this point, the technical matters of cataloguing will not be difficult to master. It takes time and experience and a particular kind of intelligence to make an expert cataloguer; but a person with common sense, perception and patience combined with clerical ability, can make a good catalogue that will be a useful tool in the school library.

Supplies.— Catalogue cards of standard size, 7.5×12.5 centimetres, approximately 3×5 inches, of the best quality of medium weight stock should be bought, ruled, if cards are to be written by hand; plain, except for the two vertical lines and the top horizontal line, if the cards are to be typewritten. It will require an average of from three to five cards to represent each book in the catalogue, and one more card must be allowed for shelf-listing each

book if catalogue cards are used for that process instead of the narrower cards. Use the best black and red inks and the style of pen that suits best to do neat work. A perfectly legible handwriting is essential and the library disjoined hand¹ is preferable. If the library can afford a typewriter, all the better. It will be necessary to have a card attachment to the machine and well to use an élite type. This type can be put on any reliable machine. A lightly inked red and black record ribbon is essential for card work.

A standard catalogue case of the best make should be provided for filing catalogue cards. It is false economy to buy anything but the best. Price lists of the dealers in library supplies and equipment give all the information necessary about the style, size and cost of catalogue cases.

Fullness of Cataloguing.— Before attempting to make a catalogue, certain matters must be decided in regard to how much information it will be necessary to write on the cards to make the catalogue a satisfactory index to the books in the library. When these points have been settled, they should be written down in a blank-book as a guide or a kind of official code to insure uniformity in the making of the catalogue. (1) Decide on how fully the author's name shall be written. Is it necessary to write Holmes, Oliver Wendell, or will Holmes, O. W. be sufficient? If a person has only one name shall it be written in full — Fiske, John, or Fiske, J? (2) Will it be useful to add the date of the author's birth and death, Fiske, John, 1842-1901, or is such information of little value in the catalogue? (3) Shall the title of a book be given in complete fullness, or just so much of it as is necessary for an adequate description of the book? (4)

¹ See Library Bureau catalogue.

What further information will be essentially useful on a catalogue card? Will it be useful to put the date of publication? size? number of pages? illustrations? maps? place? publisher? The surest way to come to a decision is to recall your own use of a catalogue. Which of these facts on a card gave you the information for which you were looking? If you have used a catalogue too infrequently to judge, ask people who have been constant users of one and get their verdict.

You will notice in chapter nine sample cards that include the number of pages, size, illustrations and date of publication. If you will examine a Library of Congress printed card you will find even more information. That amount of fullness in cataloguing may be very useful in a large library consulted by scholars, but for a school library, used by boys and girls very largely, the information is only bewildering.

Uniformity.—When a decision has been reached about fullness of entry and imprint,² the task is then one of consistency and uniformity and hence the necessity of recording decisions in an official code, to check that very common tendency in every human being, of not doing a thing twice in exactly the same way.

If, however, the library purchases some printed cards from the Library of Congress, it would be foolish to change them to conform to the other cards just for the sake of uniformity.

Types of Cards.—In cataloguing a school library, the types of cards discussed in this chapter, and the fullness of entry and imprint that is advised, will, we believe, be adequate to indicate fully the books and their contents.

² The place, publishers' name and date ordinarily printed at the foot of the title-page.

Main Cards. (1) *Author card*.—The first card to write is the author card. It contains the call number, the author's name inverted, the title, the edition, if other than the first, the number of volumes, if the book is in more than one volume, the abbreviation *illus.*, or the word *maps*, if the book contains either illustrations or maps, and the date of publication—the copyright date if there is no other date on the title page

	Mythology
x	Folklore
x	Religions
	Bulfinch, Thomas
	(gen. 2dary)

Figure 28

(a) **PSEUDONYM**.—Enter books written under an assumed name, either under the real name of the author or

under the pseudonym, whichever is the more familiar. In either case a cross reference card must be made from the form of name not used to the form that is used. Examples:

818	Mitchell, D. G. (Ik Marvel, pseud.)
M68	Reveries of a bachelor. 1892.

Figure 29

Marvel, Ik, pseud. see Mitchell, D. G.

Figure 30

F	Eliot, George, (pseud. of Mrs. M. A.(E.)L.
E42m	Cross) Mill on the floss. 1902.

Figure 31

Cross, Mrs. M.A.(E.)L. see Eliot, George, pseud.

Figure 32

(b) COMPOUND SURNAMES — Enter compound names under the first word with reference from the other part: examples Baring-Gould, Sabine, with the reference Gould, Sabine Baring—see Baring-Gould. Sabine: Watts-Dunton, Theodore, with the reference Dunton, Theodore Watts see Watts-Dunton, Theodore.

(c) MARRIED WOMEN.—Enter a married woman under her latest name unless she has always written under a former name. In either case a reference must be made from the name not used to the one that is. Example:

Craik, Mrs. D. M. (M.) with the reference Mulock, D. M., see Craik, Mrs. D. M. (M.).

(d) PREFIXES.—Enter English and French surnames beginning with prefixes under the prefix, as DeQuincey, LaFontaine; in other languages enter under the part following the prefix, as Goethe, J. W. von.

(e) TITLES OF AUTHORS — Disregard all prefixed titles except *Sir* and enter an author with that title under his surname followed by *Sir* beginning with a capital: example, Scott, Sir Walter. Use such suffix titles as lord, baronet, bishop, etc., and write with a small letter: examples, Bacon, Francis, viscount St. Albans; Tennyson, Alfred, 1st baron.

(f) JOINT AUTHORSHIP.—For a book written jointly by two authors, enter under the name of the first mentioned on the title-page, followed by the name of the second, for example: Stevenson, R. L. and Osbourne, Lloyd, reference from Osbourne, Lloyd, see Stevenson, R. L. and Osbourne, Lloyd. If there are more than two authors, give the name of the first author only, followed by *and others*, and with reference from each of the other authors.

(g) EDITOR OR COMPILER AS AUTHOR.—Enter a book under the editor or compiler with the abbreviations *ed.* or *comp.* after his name, if he is responsible for the book and no author's name is given. For example: Bartlett, John, comp. Familiar quotations.

(h) CORPORATE ENTRY.—Enter a book published by a government, department, congress, society or institution, under the name of a body publishing it as author. Examples: U. S. Education bureau. Bibliography of education; National education association. Addresses and proceedings; New York (city). Public Library. Bulle-

tin; New York (state). Education department. Annual report: Harvard university. Quinquennial catalogue.

**U.S. Education bureau.
Bibliography of education.**

Figure 33

(i) **ANONYMOUS BOOKS**—Books published anonymously, if the author is known, should be entered under the name of the author; but if the author is unknown, the top line of the card should be left blank, in case the author's name is found out later, and the title written in its accustomed place, should be used for the main entry. The note, "Published anonymously" should be written below.

**F
B82 Breadwinners. c1883.
Published anonymously**

Figure 34

(j) **SACRED BOOKS AND ANONYMOUS CLASSICS** are entered under the name of the book for an author heading. Examples: Bible, Koran, Arabian nights, Mabinogion, etc

**220.5 Bible
B85 Holy Bible, containing the Old and New
Testaments. . . American rev. version. 1901.**

Figure 35

398.2	Arabian nights
A65La	Arabian nights entertainments; selected and ed. by Andrew Lang. c1898.

Figure 36

(k) MAPS AND ATLASES — Enter under the name of the map-maker if his name is known, otherwise under the name of the publisher.

(l) PERIODICALS are entered under their names and not under the editor. The following cards show a simple and adequate way to catalogue periodicals:

370.5	Pedagogical seminary (quarterly)
P37	
	Library has:
	v.4-11, 1896-1904
	v.15-date, 1908-date.

Figure 37

370.5	<u>Education. Periodicals</u>
P37	<u>Pedagogical seminary (quarterly)</u>
	Library has:
	v.4-11, 1896-1904
	v.15-date, 1908-date

Figure 38. (Underscored words are in red)

(m) NOTES, ETC.— Besides these variations of entries, and the title, edition, date, etc., to be written on the main author card, it is sometimes necessary to add other information in the form of notes or contents. In collections of essays, stories, etc., the contents should be added thus:

814	Perry, Bliss
P46	(The) amateur spirit. 1904.
	Contents
	Amateur spirit
	Indifferentism
	Life of a college professor
	College professors and the public
	Hawthorne at North Adams
	Fishing with a worm

Figure 39

When two or more books are bound together that information should be indicated on the author card by a note beginning, "Bound with"

(n) ADDED EDITIONS.—When the library gets a new edition of a book that has already been catalogued, instead of making new cards for it, add it to the cards made for the earlier editions, thus:

342	Bryce, James
B91	American commonwealth. Ed.3. 2v. 1907.
342	———. Ed.4. 2v. 1911
B91a	

Figure 40

An index in a separate volume to the work it indexes may be entered as an added edition.

2. *Subject Card*.—Not all books require subject cards. Novels do not unless they are historical novels; books of poetry, essays, plays do not unless they are collections on particular subjects: e.g., a book of nature poems or a collection of essays on childhood. When you classify a book, you determine its subject and expressing that subject in specific terms with the help of the A. L. A. List of Subject Headings, you assign a heading. If the

book treats of more than one subject you can classify it in only one place on the shelves, but in the catalogue, by means of subject headings you can analyze it and make evident every subject that will be useful to indicate. The subject card is an exact copy of the author card except that the subject heading in red is written on the top line, to the right of the inner vertical line, and that brings the author and title down a line lower than they are on the author card. (See fig 41.)

952	<u>Japan. History</u>
M83	Morris, Charles
	Historical tales. . . Japan and China. 1902.

Figure 41 (Underscored words are in red)

952	<u>China. History</u>
M83	Morris, Charles
	Historical tales. . . Japan and China. 1902.

Figure 42. (Underscored words are in red)

(a) BIOGRAPHY.—Subject cards for biographies have the name of the person about whom the book is written, in red ink on the top line, inner indentation. Example, figure 43.

B	<u>Scott. Sir Walter</u>
S43h	Hutton, R. H.
	Sir Walter Scott. 1902. (English men of letters ser.)

Figure 43. (Underscored words are in red)

(b) BIBLIOGRAPHY.—Subject cards for bibliographies are made in the same way that biography cards are made

—usually with the words, "For bibliography of," printed in the upper left-hand corner.

(c) CRITICISM.—Subject cards for criticism are of the same type, with the words, "For criticism of," printed in the upper left-hand corner.

3. *Title Card*.—Many people ask and look for books by title rather than by author and subject, and it is best to make a title card for every book that is at all likely to be called for by title. Novels, plays, poems published separately, all books with distinctive titles or unusual ones, all books published anonymously if the authorship is known, all books published under a pseudonym should have title cards as well as author cards.

335	Tools and the man. 1901.
G54	Gladden, Washington.

Figure 44

881	Iliad, tr. by Alexander Pope
H76	Homer

Figure 45

Secondary Cards.—Besides author, subject and title cards there are certain other types of cards necessary if you would make a useful catalogue: (a) JOINT AUTHOR REFERENCE CARD, mentioned under author card p. 422. Example of form:

Osbourne, Lloyd. joint author, see Stevenson, R.L. and Osbourne, Lloyd.
--

Figure 46

(b) EDITOR, TRANSLATOR, COMPILER.—When an editor, translator, or compiler is well known, a card should be made under his name with the abbreviations, ed. tr. or comp. For example:

851	Longfellow, H.W. tr.
D19	Dante, Alighieri. Divine comedy. 1890.

Figure 47

(c) ANALYTICS. (1) *Author*.—When a book contains a chapter or a part written by some one other than the author of the main part; or when two or more works of an author, who is well-known, have been bound in the same volume, a card must be made under the author of the secondary portion in one of the following forms:

F	Hawthorne, Nathaniel
H39h	The great stone face. (in his House of the seven gables. c.1883. p. 413-38.)

Figure 48

F	Dickens, Charles
D54g	Great expectations. 334 p. (in his Oliver Twist. 1868.)

Figure 49

2. *Subject Analytic*.—If a book contains a chapter or part not indicated by the main or secondary subject headings and if it is worth bringing out under subject, make a subject analytic card for it. Example:

379	<u>Libraries</u>
J72	Koch, T. W. The high school library. (in Johnston, H.W. High school education. 1912. p. 460-70.)

Figure 50. (Underscored words are in red)

3. *Title Analytic*.—A title analytic should be made for every part of a book that would call for a title card if that part were published separately. Example:

F	(The) great stone face.
H39h	Hawthorne, Nathaniel. (in his House of the seven gables. c1883. p. 413-38.)

Figure 51

(d) PARTIAL OR CHANGED TITLES.—When a book is well-known by a part of its title, or a changed title or any form of title that differs from the wording on the title-page, it should have an additional card under that title. Examples are: “The strange case of Dr. Jekyll and Mr Hyde,” entered also under, “Dr. Jekyll and Mr. Hyde.” “The history of Henry Esmond” and under “Henry Esmond”; Arnold Bennett’s, “Denry the audacious” and under “The card,” its English title.

(e) SERIES.—Books in well-known series are frequently asked for by the series. For example: “Have you in the library the English men of letters series?” or, “the International scientific series?” It is useful to make a card for such well-known series, with a reference from the editor. The entry is under the title of the series and on the card is added a list of the works in the library which belong to the series, giving author’s

name, brief title, date of publication and call number of each item. For example:

	English men of letters; ed. by John Morley.
B	Bacon. By R.W. Church. 1886.
B12	
B	Goldsmith. By William Black. 1887.
G62	
B	Pope. By Leslie Stephen. n.d.
P82	

Figure 52

Morley, John. ed. see

Figure 53

Cross Reference Cards.— Just as reference is made from one form of an author's name to another form, and from a joint author to the main author, so references are made from one subject to another. These subject references are of two kinds, *see* and *see also*. A *see* reference is one that refers from a subject heading that is not used to one that is; a *see also* reference is one that refers from a subject heading that is used to another closely related heading that is also used. Examples:

Country schools, see	Education, see also
Rural schools	Busy work
	Kindergarten

Such cards must be made where they will be of real use in a catalogue, but great care must be shown not to overdo the matter. Do not, for instance, make continual reference thus: Domestic economy, see Domestic science and on to Domestic science, see Home economics. Do

not ever refer to a subject which you have not already used, e.g., do not refer from Education to Busy work and Kindergarten unless you have actually used those headings. Refer from the general heading to the specific heading, but not from the specific to the general. Do not say Kindergarten, see also Education.

Guide Cards.—A thumb index to a dictionary is a most convenient guide for easy use. Guides in a card catalogue are necessary for the same purpose. Stiff manila cards with a third of the width of the card projecting above the rest are used for guides. On this projecting third is written a name or word that will indicate the subject of the card filed just back of the guide card. When these guides are filed alphabetically at an average distance of an inch apart, the physical use of the catalogue becomes much simpler. These cards can be bought from any library supply firm.

Library of Congress Cards.—The printed cards of the Library of Congress can be bought for practically all books published since 1898, likely to be found in a school library. Call numbers, subject headings and title entries have to be made for these cards by the librarian before they can be put into the catalogue. The information on these cards is much fuller than is necessary or perhaps desirable for the catalogue of a school library, but if they are used, it would be unwise to take the time to change them simply to be uniform. Of course it will be necessary to adopt in some instances a different subject heading—a simpler heading—and also one that follows the usage the librarian has already decided upon.

Directions for ordering and the cost of these cards are given in a handbook issued by the Card Section of the Library of Congress. This will be sent on application.

Arrangement of Cards.—All cards are filed in alphabetical order by the word on the top line of the card, whether author, subject or title. The initial articles, a, an, and the, are disregarded in alphabetizing. Subject cards for biography and bibliography are filed before the author cards under the same name: e.g., a biography card with the red heading Dickens, Charles, would come before an author card headed Dickens, Charles.

NOTE. The instructor will select for teaching cataloging, books that will necessitate the making of cards of each type discussed in this chapter.

Chapter XXX

MECHANICAL PROCESSES

Besides entering books in certain records, there are mechanical processes necessary before books are ready to circulate. The preparation of books for the shelves is best done either just before or just after they are entered in the accession book.

Preparation of Books for the Shelves.—Some mark of ownership should be put in every library book. If a book-plate is used, that should be pasted in the centre of the inside front cover. Some libraries cannot afford the expense of a book-plate and it will be sufficient to use a rubber stamp with the library's name on it. Stamp the book on the inside of the cover, on the title-page, and on some other special page known only to the librarian. Stamping or embossing with either an embossing or perforating machine, if the library can afford either, should be done in addition to using a book-plate.

Pasting and Labelling.—A good photo-paste is satisfactory for pasting in book-plates, but if they can be bought already gummed and if book-pockets can be bought gummed on three sides, it will save a great deal of time and the pasting process will be neater. Book-pockets should be pasted at the bottom of the inside front cover, if no book-plate is used; otherwise at the bottom of the inside back cover.

The outside of each book should be marked with its class and author number, so that the books may be put on the shelves in right order and the shelves read without taking down the books to look inside for the number. For this marking, use a Judge's quill-pen no. 312 and David's white letterine for dark colored books and Higgins's India ink for books in light colored bindings. Put the numbers on all books at a uniform height — the width of a catalogue card — from the bottom of the book. When the white ink has dried, in about half an hour, brush over the numbers and letters with French spirit varnish. The India ink does not need the protection of the varnish. When the backs of books are too highly decorated for direct marking, either use a gummed label and write the call number on it, or use gummed figures and letters made by the Tablet and Ticket Company, New York.¹

Mending.—The school librarian will not have much time for mending books and the need for mending should be reduced to a minimum by (1) buying as many books as possible in reinforced bindings; and (2) by teaching students the proper care of books. Books in reinforced bindings can now be bought of several publishers if requested, at a cost of a few cents a volume extra. In buying editions of Everyman's Library always get the reinforced at \$1.00 instead of the usual cloth edition at eighty cents, because it is stronger and therefore cheaper in the end.

WHAT TO MEND.—It is not good economy for a school librarian, particularly as she seldom has an assistant to do such work, to spend the time on elaborate mending

¹ These may be had in assorted boxes, both white and black, and of a convenient and legible size.

that she should be giving to more important phases of the work. Torn pages, loose leaves, and loose joints might very well be repaired, but further than that, when sections become loose and the cover comes off and worse things happen, the book should be sent to a binder.

From the A. L. A. Manual of Library Economy, chapter 26, p. 15—"Bookbinding," by A. L. Bailey, we quote the following practical suggestions: "Mend (1) books which have been rebound once but which would not pay to rebind again; (2) books which have nearly outlived their usefulness, or are to be withdrawn absolutely when entirely worn out; (3) books which must be on the library shelves; (4) books printed on heavily loaded paper which will not pay to rebind."

For clear and practical directions on the mending of books we can do no better than refer the student to the A. L. A. Handbook number 6, price fifteen cents, compiled by Margaret W. Brown of the Iowa Library Commission.

Binding.—What to bind will depend on the amount of money the library has to spend and the use it makes of certain classes of books. (1) Bind those magazines that are used steadily for reference work. All others, as well as newspapers, may be tied up in volumes, wrapped in paper and labelled with name, volume and inclusive dates. (2) Rebind all reference books just as soon as they indicate the need of it. (3) Rebind all general books of permanent value that cannot be replaced for fifty cents. Many books are too badly torn or soiled to be worth rebinding.

BINDER.—If possible, select a reliable binder who knows what library binding should be and learn yourself what good library binding is. Cheap prices mean

cheap work and such prices should not be expected. The librarian will do well to have the binder follow specifications as given in the A. L. A. Handbook number 5. If the binder chosen cannot follow these specifications intelligently, select another one who can and will. A careful study of the references listed below will acquaint the student with what good library binding is; but this study should be supplemented when possible by a visit to a good bindery to observe the actual work.

PREPARATION OF BOOKS FOR THE BINDERY.—(1) Magazines. Look over each volume carefully to be sure it is complete with title-page and index. If these are wanting, write to the publisher for them. Arrange the magazines in order, placing title-page and contents first, magazines next, and the index last. Place a binding slip in the volume to indicate material, color, and lettering.² It is very important to keep a set of periodicals in a uniform binding, so a copy of the binding slip for each set should be kept on file in the library. If the same binder does the work from year to year, it will be unnecessary to write instructions in regard to style and material after the first time, because the binder keeps a record of the style. (2) Books. The librarian need not carefully collate books for rebinding, because the binder will do it, but it is well to make a hasty examination of each book to see if the title-page or any important part is missing. Ordinarily books with missing parts should not be rebound, but sometimes a type-written title-page and table of contents, etc., copied from another copy of the book, might well be made and sent to be bound in.

² These slips can be bought of Gaylord Bros., the Library Bureau, and the Democrat Printing Company.

A binding slip with directions to the binder should be put in the front of each book.

Chapter XXXI

PAMPHLETS, PICTURES AND CLIPPINGS

A collection of pamphlets, pictures and clippings can be made very useful in a school library, but the librarian must plan carefully and wisely, not only to select just such material as will be of real use but to classify, catalogue, and file this material in a way that will make it readily usable. . The task is no small one, and it is made more difficult by reason of the fact that we are prone to reach out eagerly for everything that is given away. We may obtain it free of cost, but to make it available for use costs something and that something is what the librarian must consider. Is the time given, the material used, the shelf-room taken up, the energy expended, of small enough cost to the library to make the pamphlet or the picture an acquisition that the library can afford? Its use determines the question. Use always determines the problem of selection; in short, use determines each process the pamphlet is put through: classification, cataloguing, and filing. The uses of pamphlets, pictures, and clippings differ somewhat and for that reason they will be discussed separately.

Pamphlets.—Already in Chapter VI suggestions have been made about obtaining special public documents, many of which are in pamphlet form. Advice was there given to bind Farmers' Bulletins and the Bureau of Education Bulletins, but no specific directions were given about filing

the separate pamphlets. The information given here applies to those pamphlets as to all others the library may acquire.

Selection.—The selection of pamphlets is determined by the needs of the school. There are no particular aids in the selection of pamphlets for school libraries other than the lists from which to select government documents. These lists may be obtained from the Superintendent of Documents at Washington or from any of the Departments issuing them. Not much unsought pamphlet material as a usual thing finds its way to the average high school library. Valuable pamphlet publications on many social and economic questions are issued by various societies and organizations and the librarian should request such of these pamphlets as will be of use to the school library. The publications of other schools, even in other States are often sent as exchanges and much of such professional literature is valuable. Most State Universities publish a series of bulletins, and the school librarian should make an effort to get some of them. These bulletins are not only useful in the many departments of instruction but also in various student activities, particularly for debates. Catalogues of important colleges, and high school courses of study will be found useful. Programs, printed or typewritten, of all entertainments given in the school should be kept on file. There will also be use for some advertising publications.

Classification and Cataloguing.—The problem is but just begun when a wise selection of pamphlets has been made. Next comes the task of classifying and cataloguing them. Each pamphlet must be given a number that will place it where it will most probably be wanted. The amount of cataloguing depends upon the amount of

time the librarian can afford to give to this particular part of the work. It is absolutely necessary to make one general reference card for each group of pamphlets: e.g., "371.7 School Hygiene. For additional material on this subject, see also pamphlets." If time will allow, more detailed cataloguing will be useful: each pamphlet being represented in the catalogue by a subject card, rarely by an author card.

Filing.—Many devices for holding pamphlets have been tried and found useful; perhaps the two here described will be the most practicable for school libraries:

(1) **Pamphlet Boxes.**—The most durable are wooden cases, and they are cheaper in the long run. A school library might very well arrange with the manual training department to make a year's supply of pamphlet boxes during each fall term of the session. Instead of covering the boxes with marbled paper, stain them and the whole cost per box will average not over eighteen cents from the smallest, $10 \times 7 \times 4$ inches, to the largest needed, $12 \times 9 \times 3\frac{1}{2}$ inches, outside measurement. A label of white paper 2×3 inches should be pasted on the front of the box two inches from the top with equal margins on each side. See illustrations on page 452.

On this blank label write the number of pamphlets in the box, the classification number and the subject heading that has been given to the general reference card in the catalogue: e.g.,

371 7
School hygiene
Pamphlets
1-6

Illustration 17

If the pamphlets have been catalogued separately, give the inclusive class numbers and below the subject headings of each pamphlet in the box: e g., 640.7-642

Home economics. Study and teaching
Cooking
Chemistry, Household
Menus

Pamphlets
1-4

These boxes are put in their regular places on the shelves with the books.

(2) **Vertical File.**—The vertical file is the best means of keeping pamphlets and clippings and it has the additional advantage of being a suitable place for filing unmounted pictures that are not too large. For pictures mounted on pulp board mounts of the uniform size, $13 \times 17\frac{1}{2}$ inches, it will be necessary to have made special boxes¹ for vertical filing.

Each pamphlet put into the vertical file is given a subject heading which is written on the manila folder used for holding the pamphlet. Pictures, and clippings pasted on manila sheets, are treated in the same way. The folders are arranged in the drawers alphabetically by the subject headings.

Pictures.—The two chief sources from which to obtain pictures are: (1) Old magazines, books, advertisements, etc., that are ready to be discarded—the pictures to be carefully cut out, always preserving in the clipping the title of the picture and the name of the artist, if they are printed; (2) picture dealers, who print inexpensive copies of great works of art. Write for their catalogues and make a selection. A list of picture dealers will be found at the end of this chapter.

An Index to Illustrations, compiled by F. J. Shepard and published by the A. L. A. 1924, is useful for finding illustrations in magazines and books that may be on the library shelves. The entries are arranged under subjects and the school librarian will find it a help in locating pictures called for by teachers.

One of the most useful helps for teachers and librarians is the list of Illustrative Material for High School Literature, compiled by Miss Hilson, Miss Wheeling and Miss Smith and published by the H. W. Wilson Com-

¹ See Dana, J. C. The picture collection. (Modern American library economy series, ed. by J. C. Dana.) N. Y. Wilson

pany. The arrangement of material under subjects, with full descriptions of the types of illustrations obtainable, and addresses of dealers, makes this a very usable list.

Selection.—Some of the courses of study for which instructors will find illustrative material useful are: Literature, pictures of places and people illustrating an author and his works; Geography, pictures of travel, manufactures, industries, mountains, rivers, etc.; History, pictures of historical characters, places, events, etc.; Art, reproductions of great works of art; Nature-study; Domestic science, etc. Pictures should be selected primarily for the actual work of the classes needing them, though there will be legitimate calls on the library for pictures of a more general character. For aid in selecting pamphlets the Standard Catalog for High School Libraries, compiled by Zaidee Brown and published by H. W. Wilson, 1926 is excellent. At the end of each class of books, the best available pamphlets on the subject are listed.

Mounting and Filing.—Many pictures need not be mounted but they should be kept loose in manila folders for filing. Those pictures that are used often should be mounted on a thin pulp board. Colored prints are more pleasing if put on gray and brown mounts. The pulp board and colored mounts may be bought of most paper dealers in sheets 26×36 inches and 26×38 inches. The price depends on the quality and the quantity bought. At a small additional expense the sheets will be cut by the dealer in the sizes specified. A 15-inch blade paper cutter will save much time in trimming the margins of pictures before mounting them or inserting them in celluloid picture holders.

Place the picture in the middle of the mount from either side, leaving a deeper margin at the bottom than at

the top. Use a good library paste—Higgins's and Sandford's are both good—and tip the picture at the four corners. Pictures should be pressed down by an even, heavy weight until dry and firmly stuck.

For the circulation of pictures, the celluloid picture holders, manufactured by Gaylord Brothers, Syracuse, N. Y., are excellent. They save the time and expense of mounting pictures and, when the unmounted pictures are not being used, storage of them in a vertical file takes less space.

The vertical file, with pictures arranged alphabetically by subject, is the most satisfactory method of keeping pictures. It does away, too, with the necessity of cataloguing pictures. To lay pictures flat in boxes is an excellent way to store them, but for use and easy handling the vertical file is the only practical device.

Post Cards.—A selection of post cards is a useful part of a picture collection. Grouped by subject with several mounted on the same board, they are uniform with the mounted pictures for filing. If, however, the school owns a reflectoscope, the cards should not be mounted, but filed by subject in special drawers made for filing post cards.²

Lantern Slides.—If the school owns a stereopticon the library might very well add a selection of lantern slides to its collection of pictures. The slides should be arranged alphabetically by subject and filed in a box.

Clippings.—The school library will find it almost necessary to clip a few newspapers and perhaps some magazines that are not to be bound, and file the clippings. It is only in this way that current information on local mat-

² Special combination cabinets for filing post cards, lantern slides and photographs may be obtained from library furniture manufacturers

ters and on political and economic questions can be kept up to date. Besides clipping the local papers for local news, the *New York Times*, or some other equally reliable paper should be clipped for world wide matters. When the demand for this newspaper information is past, the file should be weeded out. The simplest method of filing clippings is to paste them on manila sheets and file the sheets in the vertical file with the pamphlets.
